1855. [SST] Re: Funny Dispatches?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-29 23:12:19 UTC
From: Monica
Topic: 1806 Message: 1855

Dispatching a fire call, the only location given was corner streets - Jones and Post - in San Francisco. And the dispatcher added that it was an awning on fire over the steet entrance to a building on Jones.
The responding truck asked for an address.
The dispatcher replied, "Well, it probably was on the awning. Just look for the awning on fire when you get there."

1856. [SST] Re: Frequency blocks

scanners
> not going to be able to pick up police, fire, and ambulance
frequencies. Is
> this true? Is there a way I can still listen if they do block those
> frequencies?

As long as they transmit on frequencies your scanner receives and don't
go
to digital transmissions, you can listen to them. They may be going
digital
or they might scramble or encrypt, but that's pretty expensive. It
should
be listed in your city's budget or maybe you'll get to vote for it. I
would
bet they're going digital, maybe some sort of 800 MHz system, rather
than
encryption or scrambling. Call your local newsroom and ask. They
monitor
the police frequencies and it would hurt their ability to chase the
ambulances if they couldn't monitor the frequencies. Not that I have
any
great love for the media, heh.

1857. [SST] Re: nextel

Yahoo group: stupidscannertricks (1998 — 2000)

From: kepi blanc
Topic: 1769 Message: 1857

On Tue, 26 Oct 1999 22:11:34 Culby288 wrote:
so leading back to the question can you some how listen to the nextel 2 way radio ?

Perhaps, but only if you have the proper setup (i.e., a modified digital receiver and dish, possibly from a satellite TV package, in conjunction with PC-assisted scanning, possibly with a modified version of WinRadio software) and the technical know-how, which is far beyond the abilities of a typical scanner hobbyist. (I've never done it myself by the way, and never figured out the details, either.) I'm sure the Feds can do all this, but then again, they have loads of money to spend also, which few citizens could match.

1858. [SST] digital comms in the South East

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-30 07:56:42 UTC
From: korfus@juno.com
Topic: 1858 Message: 1858

Anyone here in the S.E. that is on the power company know as southern company, has probably heard of the southern linc system.
Well it is supposed to be even hurricane proof,yeah right. Well I was involved in a Search and Rescue op, a little over a month ago, a lightning strike took out a central microwave link and the entire system shut down for several hours forcing us to break out the ole trusty 155.280 radios, and vhf marine radios.
It seems technology is good for sucurity but not reliable for disaster ops.

Anyone else here know of any similar incidents ?

Walter

I happen to keep my Fire dispatch and EMS radios on, even while I'm in bed.
About three weeks ago a Rural Metro unit lost its alternator belt. The driver was getting upset from being out so long before the replacement med unit could get there.When he called in to say he was leaving with another unit the dispatcher advised him, " we'll just mark it down as a dead ass ! " I laughed so hard I almost went off the bed.

To All stupidscannertricks subscribers,

I would like to take a moment to remind you that you can make a member profile on egroups. I would like to encourage all that are interested to feel free to fill out a profile on yourself, so that we can all get to better know each member that takes the hobby of scanning close to heart.
Also if you have any information on changes to your local or state scanning laws, Please email me at korfus@... or contact me at ICQ # 8934367, also my yahoo messenger screen name is juskorfus.
I am trying to put together as much info. as I can on the rapidly changing laws concerning private use of scanners, I appreciate any information I can get.

Thank You,
Walter

1872. [SST] Zappers anymore???

How do you make a profile???
P.S. Not to critisise you, but why don't you get a web based account so you don't have to disconnect from the internet to get email and you just don't recieve text (or ACII)

Happy Halloween!

1875. [SST] Re: Member Profiles

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-31 19:15:14 UTC
From: walter Jinright
Topic: 1871 Message: 1875

Hi,
I was just trying to clarify how to make a profile. When you log in to www.egroups.com you have the option under the banner link "members" to go to your member name, which is your email address. Then you can create a member profile and even leave a link to a photo of yourself if you like. Sorry if anyone thinks this is too much off the subject of scanning, I just thought we could all just get to know one another better, since there are over 900 members to stupid scanner tricks now, members should be able to use the profile area to find other members close to home and maybe even set up a coffee break like I and some friends here in Florida do.

Thanks,
Walter

1878. [SST] handheld overload?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-31 21:35:11 UTC
From: Bruce Alan Weaver
Topic: 1878 Message: 1878

Hi,
I'm new to the group and have a basic question. I have a Pro-60 and an IC-R2. I would like to add an external antenna to my house for these 2 radios. Any advice? Is it possible to get too good of an antenna and overload the handheld radio? Will my IC-R2 pick up the BBC with the proper antenna? Also...I work for the railroad and could answer any railroad questions anyone might have.

thanks,
weav

The FCC made those guys quit selling the zappers. I talked to the guy from Rainbow Kits, they used to sell them in either kit form or fully assembled and that is what he told me. If I hear of anyone who has them I will post it here.

I overheard at the DAYTON HAMVENTION a former Indianapolis dealer of them tell a prospecrive buyer that Federal agents stopped in and told them to stop selling them? I figured that if they were tuned to the amatuer frequencies below 10,500 Mc., they would be okay for hams to buy. BILL.

(FCC No. 99-324). CCB

TELEBERMUDA INTERNATIONAL, L.L.C. Granted the Application for Consent to Transfer of Control of TeleBermuda International, L.L.C. to TeleBermuda International Limited. Action by Chief, Telecommunications Division, International Bureau. Adopted: October 29, 1999. by MO&O. (DA No. 99-2381). IB

IN THE MATTER OF AMENDMENT OF THE COMMISSION'S REGULATORY POLICIES TO ALLOW
NON-U.S. LICENSED SPACE STATIONS TO PROVIDE DOMESTIC AND INTERNATIONAL SATELLITE SERVICE IN THE UNITED STATES. The Commission streamlined the regulatory process by which non-U.S. satellites may access the United States, while ensuring that foreign entry is consistent with U.S. satellite policy and is otherwise in public interest. Thus procedural changes should reduce the number of earth station license modification requests, and results of substantial savings, and allow more rapid service
to the public, and should increase competition in the U.S. market for fixed-satellite service in the conventional C and Ku bands, providing consumers withmore choices and better prices. By First Order on Reconsideration. Dkt No.: IB-96-111. Action by the Commission. Adopted:
October 28, 1999. (FCC No. 99-325). IB

GRAND ISLE AND EMPIRE, LA. Proposed substitution of Channel 283C2 for Channel 283A at Grand Isle, LA, the reallotment of Channel 283C2 to Empire, LA, as the community's first local transmission service, and modification of its authorization accordingly Comments Due: December

20,
1999; Reply Comments Due: January 4, 2000. Action by Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau. Adopted: October 20, 1999. by NPRM. (DA No. 99-2353). MMB

MARYSVILLE AND HILLIARD, OHIO. Effective December 13, 1999, amended FM Table to Allot Channel 289 A to Hilliard; modified license of WZAZ-FM, accordingly. Dkt No.: MM-98-123. Action by Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau. Adopted: October 20, 1999.

Hi All,
I have had another crash,well I think it was a virus. While catching up on my 900 plus emails, my HD crashed and I have to travel 45 miles to my brothers to log into egroups.
So if you will all be patient with me, it might tale a little more time for me to modererate the list until I get a new HD. By the way if you have a computer depot in your area check it out, I was just informed they have 20.3 GB drives for like 149 bucks.

And on the subjects of funny dispatches, I stuck my foot in my mouth this morning. I called in "no-joy" we had not found the body of a missing man in the Escambia Bay, Well I was on a mutual-aid channel which was a neighboring county to Escambia. I "argued" with the dispatcher that I was on a signal 8, when she kept saying we have no signal 8 report. I said you dispatched us to it, "No I didn't" replied, then I looked at my display on my MT1000 and OOOOps, I felt DUMB, everyone on the air got a laugh.

Walter

Last night I was listening to the Louisville, Ky PD channel 2 on 460.1500 MHz. I heard a rather amusing conversation between an officer and the dispatcher. The background on this call is an elderly women was having trouble with her neighbors and wanted assistance. Keep in mind the unit # is not the actual one!

"223 adam to radio, we're unable to raise anyone could you try the call back number."

"Radio's o.k."

"Radio to 223 adam, I tried the callback and got what I think was a machine, it answered and said "Praise The Lord" and hung up."

"223 adams's o.k."

Does anyone know the freqs used by ABC sports during the Kentuck Derby, as well as ESPN frequencies used during the derby. I'm also looking for the frequencies used by the pyro-technics (please forgive my spelling) company that performs Thunder Over Louisville. The name of the company is the Zambellie family or somthing like that.

Thanks for your help,

1898. [SST] railroad scanning tricks

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-03 03:27:43 UTC
From: Bruce Alan Weaver
Topic: 1898 Message: 1898

The most common railroad frequencies are those for the AAR radios:
02 159.810
03 159.93
04 160.05
05 160.185
06 160.200
07 160.215
all the way to:
97 161.560

With the exception of the first few channels they increase in .015 MHz increments. 02-06 are reserved for Canada and each railroad is assigned certain frequencies but the big radios in the locomotives will tune all channels. In addition to switching, dispatchers, and yard operations there are communications among crews that few people hear...and the crews believe they have privacy. As we know, nothing on a radio is private. I've worked on crews where the hoghead (engineer) will say "It looks like it may rain". That might mean 'turn your radio to 5050'. The first two are the TX freq. and the next two are the RX. With train crews TX & RX will be the same. Passing trains with crews that know each other will often converse about everything from the weekends festivities to their displeasure with management. Interesting listening...

see ya,
Bruce

here is the correct AAR channel list remember channels 1-6 are only used in Canada

159.885 channel 1
159.91 channel 2
159.93 channel 3
160.025 channel 4
160.085 channel 5
160.115 channel 6
160.215 channel 7
160.23 channel 8
160.245 channel 9
160.26 channel 10
160.275 channel 11
160.29 channel 12
160.305 channel 13
160.32 channel 14
160.335 channel 15
160.35 channel 16
160.365 channel 17
160.38 channel 18
160.395 channel 19
160.41 channel 20
160.425 channel 21
160.44 channel 22
160.455 channel 23
160.47 channel 24
160.485 channel 25
160.5 channel 26
160.515 channel 27
160.53 channel 28
160.545 channel 29
160.56 channel 30
160.575 channel 31
160.59 channel 32
160.605 channel 33
160.62 channel 34
160.635 channel 35
160.65 channel 36
160.665 channel 37
160.68 channel 38
160.695 channel 39
160.71 channel 40
160.725 channel 41
160.74 channel 42

160.755 channel 43
160.77 channel 44
160.785 channel 45
160.8 channel 46
160.815 channel 47
160.83 channel 48
160.845 channel 49
160.86 channel 50
160.875 channel 51
160.89 channel 52
160.905 channel 53
160.92 channel 54
160.935 channel 55
160.95 channel 56
160.965 channel 57
160.98 channel 58
160.995 channel 59
161.01 channel 60
161.025 channel 61
161.04 channel 62
161.055 channel 63
161.07 channel 64
161.085 channel 65
161.1 channel 66
161.115 channel 67
161.13 channel 68
161.145 channel 69
161.16 channel 70
161.175 channel 71
161.19 channel 72
161.205 channel 73
161.22 channel 74
161.235 channel 75
161.25 channel 76
161.265 channel 77
161.28 channel 78
161.295 channel 79
161.31 channel 80
161.325 channel 81
161.34 channel 82
161.355 channel 83
161.37 channel 84

PBX is used for dialing a phone using the railroad's radio system. Every railroad radio can do this. (private branch system) Check out any railroad listing in a frequency book and the PBX channels should remain the same for very wide areas. There should only be one or two freqs assigned for phone conversations. This is pretty boring stuff though, since they know everybody on the rail can hear them, so there is very little juicy stuff there.

Are Digital 900mhz cordless phones really that secure? Would it be possible for someone to tap the output of a scanner and use a digital handset or base (providing it is of the same type as target phone) to "unscramble" the conversation?
Or does the old adage to not say anything you wouldn't want your neighbor to hear still hold true?

1915. [SST] Re: Uniden 3000XLT

If it has the 225-408Mhz band, you can monitor about ten seconds of transmissions when they talk to civillian ATC (air traffic contol). They only broadcast unscrambled when they need to talk to ATC to clear takeoffs and landings at primarily civillian airports. Any other time, it's digitally encrypted and way up there in the the GigaHertz. Sorry, but that scanner won't touch 'em. After all, they've gone great lengths to keep you from listening to the radios that your tax dollars bought. Work hard, everyone. Uncle Sam wants YOUR money!

I recommend the Pro-2006 from Radio Shack.
Mine has served me well for 7 years, and it is very very easy to modify
for "other" bands.
However all the military aircraft bands come with the stock radio
(5mhz - 600mhz unbroken).
Some special features allow the user to choose any MODE to any freq
(AM - FM - WFM).
I have found military aircraft in the bay area of California and in the
testing grounds of New Mexico very easy to monitor.

Below is the result of your feedback form. It was submitted by () on
Thursday, November 4, 1999 at 20:51:15

What: what? TV News Directors
frequency: from what to what?869-896
body: During any major emergency in your area check the cellular band for
remote cueing of in the field news reporters. During the current
EgyptAir flight I am continuously monitoring the MSNBC directors. (You
here the director through the entire day not just during local
segments)...now here's the FUN PART...if you have a stereo VCR connect
the audio output of your scanner in one channel, and the audio output of
your satellite receiver or cable box in the other channel, now you can
simultaneously tape the news with all the directors running monologue
("change chyron, roll 22, boxes, change chyron, where did they get this
#$%^ing coffee, back in 5,4,3,2,1...")very entertaining and very
educational. (Also spent hours listening to FOX news channel.)
(Disclaimer: The FCC prohibits intereception and monitoring of cellphone
frequencies...mine were actually image freqs, yeah that's it image
freqs...i didn't realize they were cellular until right now....yeah
that's it!)

Hey,
I've got a 900mhz cordless phone, and so does everyone in my family, and
I can pick up all of them on my scanner. I don't understand why they say
that 900mhz are so great, if I can pick up ALL of them. The old saying is
still true with me.

What about those paintball commandos out there who are getting smart to scanners and scanning Talkabouts - how do you keep them from being able to hear?

In paintball, you may not be able to keep the other side from hearing your communications. The USMC (United States Marine Corps) had a similar problem with the Japanese during World War Two. The Japanese military intelligence corps would routinely monitor and translate USMC radio transmissions by scanning the airwaves. So, a paintball squad could do what the USMC did back then: start talking in codes rather than just plain English. As a solution to the security breach, the USMC recruited Navaho Indians straight from the reservations in New Mexico to become radio operators in the South Pacific. The Japanese could hear the Navaho code talkers, transmitting back and forth to one another in their own Navaho language. Much to their frustration, the Japanese couldn't interpret the radio transmissions of the USMC Navaho code-talkers no matter what they tried. In order to be most effective, the paintball squad's code-talking would have to be changed from time to time, lest the other side figures out what the code phrases mean.

I'm sure they have some law against it, much the same way that the town where I go to school has a law that all vehichles driving after dark MUST carry burning lanterns. Anyway, back to the point. Marine radios TX near the 2 metre band whilst the FRS radios TX near the 70 centimetre band. Still, CB radios TX near the 11 metre band. The longer the wavelength, the better the chance that the signal will bend over hills and around buildings to make greater distance. Thus, CB should give the greatest range. However, you can't put a 1/4th wave 2.5 metre (9 foot) antenna on a walkie-talkie. There goes that idea because a shorter antenna would result in losses that more than offset any gain. A VHF radio, however, is a great comprimise and would, I believe, result in greater range.

If you want to fool the commandos, get a digitally encrypted buisiness radio. OR, you can go to http://hometown.aol.com/ctpds49/index.html and get a speech inversion scrambler/descrambler that you can hook into your radio. Call the number at the bottom of that page for more info. At one time, he had a kit taylor made for walkie talkies. I have one already built that I may be willing to sell (works well).

I'd like to give my sincere apologies to the group that an inappropriate web form submission passed through a loophole and was posted to you all. I've taken action and made some adjustments to the way the list handles these submissions, adding a second check to catch all these submissions so they are reviewed twice before going to the group.

While I can't take back what slipped through from a third party, I can assure you that appropriate measures are now in effect.

If you have any further comments on this issue please e-mail me directly. The e-groups software mangles e-mail addresses, but my address is rbarron at exo.com.

with 900 MHz the frequency is much higher therefor adding more range.
There are several different types of 900 MHz.
DSP or Digital Spread Spectrum
witch is the best for range.
IF YOU REALLY WANT A GOOD PHONE FOR RANGE AND OUT OF THE FREQUENCY RANGE OF
YOUR SCANNER TRY A 2.4 GHz PHONE!!!!!!
you can get them at any major electronics retailer. (BEST BUY, TECH
AMARICA(RADIOSHACK.COM)OF EVEN CIRCUT CITY.
thanks

You are getting some great advice from BROWN82 and KEPI BLANC. Excellent advice.
I will agree that using a CB radio may be not as effective as UHF. Simply because it is AM and the UHF is FM which means if they try to JAM you it will not be as successful with an FM radio, since FM "captures" the channel with it's signal, and the closest walkie talkie will completely "walk the dog" as they say over the jamming radio which is farther away. CB transmissions can easily be jammed by other CB radios on the same channel even if distances are at the edge of reception range.

1932. [SST] Paintball Radio tips

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-05 23:36:40 UTC
From: Monica
Topic: 1932 Message: 1932

If the other team is using CB radios, have someone sit is a vehicle near the area of combat, someone with a CB mobile radio in the vehicle, and give them the boring but tactical job as "Jammer". Or better yet, if the other team is unaware of your "Jammer" have him relay to you on UHF what he is monitoring on the opponent's CB transmissions.
Have a code for changing channels but make it a code like "EVERYONE STAND BY", which actually means to switch frequencies to a pre-designated secondary channel. If your opponent is monitoring he will wait on the old channel thinking it is still active, just temporarily silent. If you pre-arrange to tell your team that the "old channel" becomes a dis-information channel, then you can visit the old channel with team members after this is done to give DIS-INFORMATION periodically to keep the opponent monitoring a false frequency and hearing the wrong information. "Stand By" brings your whole team back to the secondary channel for real tactical communication.
Try to make codes that do not sound like codes. (Not the usual 10-100, or Adam52 codes) Make them names of places, people, cars, animals. Very confusing to the enemy.
North, east, west, and south for example can be called Chuck Norris, Easy-prey, Waynes World, and Super-Sport. Easier to memorize too.
"Radar"

still true with me.

What saying is that? Anyway, if you're able to pick up your own and your family members' 900 MHz cordless phones with your scanner, then it must be because all of those 900 MHz cordless are ANALOG, not DIGITAL or DSS (DIGITAL SPREAD SPECTRUM). Only the digital or DSS types are secure from conventional scanner reception.

> In paintball, you may not be able to keep the other side from hearing your
communications. The USMC (United States Marine Corps) had a similar problem with the
Japanese during World War Two. The Japanese military intelligence corps would routinely
monitor and translate USMC radio transmissions by scanning the airwaves. So, a paintball
squad could do what the USMC did back then: start talking in codes rather than just plain
English. As a solution to the security breach, the USMC recruited Navaho Indians straight
from the reservations in New Mexico to become radio operators in the South Pacific. The
Japanese could hear the Navaho code talkers, transmitting back and forth to one another in
their own Navaho language. Much to their frustration, the Japanese couldn't interpret the
radio transmissions of the USMC Navaho code-talkers no matter what they tried. In order to
be most effective, the paintball squad's code-talking would have to be changed from time to
time, lest the other side figures out what the code phrases mean.

Scan . . . . .
Start @ 927.200 and back to 926.000 . . .
You will find the new digital phones there . . . .

for someone to tap the output of a scanner and use a digital handset or base
(providing it is of the same type as target phone) to "unscramble" the
conversation?
Or does the old adage to not say anything you wouldn't want your neighbor to
hear still hold true?

I think it could be possible to tap a digital 900 MHz cordless phone's transmissions with a modified satellite TV dish and a computer-assisted scanner; perhaps with something like the WinRadio 3.1 software. I'm sure it's already been done by somebody out there....

From: David Ian Easton
Topic: 1769 Message: 1939
Attachments: 1 described; 1 payload recovered; 1 recovered file is retained separately and not shown in this PDF

This prob with you scanner making Noise's just before the Digital phone Rings is Normal it's because your scanner's revice it most likey some think like .05 Micro Volts, when a Digital phone reivices a Call what happens (this is only Ruff) the Cell sends out a call for you Phone to check it's on and your phone then Poll's the cell to say it's with in Range then the cell (base on the Poll information) Tell's the phone what Channel and code set and power to use.. this Information being sent makes your Scanner Beep as to the Reason you Pick it up on all Channels it's because your Scanner's Pick up is VERY seitive so the power of the digtal Fouds the band in the small area (some people call this Intermod)

hope you find this infortion intersting...

Recovered attachment (separate file): embedded_attachment_01.bin (application/ms-tnef, 2208 bytes)

>Not sure what gives.

You have an analog 900 Mhz phone and they are indeed easily monitorable.
The security codes are just to keep others with similar phones from using
your phone line.

You need to get a Digital Spread Spectrum phone. Those are nearly impossible
to monitor without some very specialized equipment. You try listening to one
and all you hear is white noise.

I sure wouldn't put a 2.4 GHz phone next to my brain, considering that's
the resonant frequency for vibrating H2O molecules. That's like holding
your head beside a microwave.

On Mon, 8 Nov 1999, Josh ????? wrote:

From: brown82@MARSHALL.EDU
Topic: 293 Message: 1943

Sorry if I seemed to misinform anyone. It's just that since I've been here, the only stuff that's close is an ANG base and it sounded all-digital. Upon closer examination by asking around, I concluded that they were changing to another system that they hadn't disclosed. I just figured that if ANG was doing it, Air Force had long done it, but maybe they just got a little extra money to implement some plan early.

On Sat, 6 Nov 1999, Tom Lucas wrote:

> > In paintball, you may not be able to keep the other side from hearing your communications. The USMC (United States Marine Corps) had a similar problem with the Japanese during World War Two. The Japanese military intelligence corps would routinely monitor and translate USMC radio transmissions by scanning the airwaves. So, a paintball squad could do what the USMC did back then: start talking in codes rather than just plain English. As a solution to the security breach, the USMC recruited Navaho Indians straight from the reservations in New Mexico to become radio operators in the South Pacific. The Japanese could hear the Navaho code talkers, transmitting back and forth to one another in their own Navaho language. Much to their frustration, the Japanese couldn't interpret the radio transmissions of the USMC Navaho code-talkers no matter what they tried. In order to be most effective, the paintball squad's code-talking would have to be changed from time to time, lest the other side figures out what the code phrases mean.

Topic: 1928 Message: 1944

IF YOU REALLY WANT A GOOD PHONE FOR RANGE AND OUT OF THE FREQUENCY RANGE OF
YOUR SCANNER TRY A 2.4 GHz PHONE!!!!!!
you can get them at any major electronics retailer. (BEST BUY, TECH
AMERICA(RADIOSHACK.COM)OR EVEN CIRCUT CITY.

That's all true, but unfortunately, 2.4 GHz phones are a bit expensive, aren't they?

On Fri, 5 Nov 1999 17:43:05 KC7ZNA wrote:
I bought a 900mz cordless phone because it says on the box that it has "1000 security codes," but my neighbor says he can hear every word I say on his scanner. I'm not sure what gives.

Those codes are meant to keep other 900 MHz phones within range from interfering with your phone's TX and RX, similar to the 38 "quiet codes" found on some 14 channel FRS transceivers that are commonly used by folks engaged in outdoor activities. The codes only block reception from devices that are similar to it, but not fom broad-band receivers like scanner radios. You apparently bought an analog 900 MHz cordless phone too, since that's the only type of 900 MHz cordless that scanners can monitor. Today's conventional scanners cannot monitor 900 MHz digital and 900 MHz digital spread spectrum (DSS) cordless phones. Cordless phones such as these are generally the most expensive ones in their category, unfortunately.

I hate to complain but I just can't bite my tongue anymore don't any of you own a dictionary or know how to use the spelling check feature on your computer? Ordinarily I don't sweat the small stuff, but all the spelling errors in that last post were ridiculous. I do volunteer work at a public school giving spelling tests to the kids. How can we expect our children to know how to spell, if we don't set an example for them. At least proof read before you hit the send button. To me it makes the post & the sender sound kinda dumb. Now that I'm done griping I think most of the stuff on the list is great!

Dan since you mentioned the improper spelling of several words I would like to point out something. Quoting you "...kinda dumb.", kinda is not a proper word you should of used kind of instead. Next time spell correctly yourself before you complain!

From: Ronald
Topic: 293 Message: 1949

I just want to make sure I signed up for "stupidscannertricks" list. I dont recall ever signing up for school. I though I graduated back in 1990? can someone please confirm that this is a scanner list?

As to Mr. Fuller's grammer correction's, if you want to play Mr. Teacher I suggest you join another group and don't worry about us people who don't spell correctly. Hell most of us write to fast and we just hit send on the key board instead of worrying the spelling so Mr.fuller if you don't like our spelling and feel you may get a heart attak(oops,did I misspell?) then why don't you just unsubscribe or delete what you don't like.

and lets get back to SCANNING ! on what this list is really about. geeeeshhhhhhhh.

Thank you,
-Ron

If yoo nowe wat freekwensy they are tranzmitting on, yoo can bild a Yagi-Uda antanna or 2 dipoles spaced one haff wavelength apart and yoo can trak them by watching the signal meeter or by lissening for the strongest signal as yoo poynt the antanna arround.

(P.S.- I didn't mean to hack on the school volunteer, in fact, I appreciate a little constructive critcism for the board. I just wanted a cheap laugh for everyone!)

Topic: 1951 Message: 1951

I have a Radio Shack Pro-75 portable scanner.
Anyone know how to program out of band or cellular frequencies?

Also, could you let me know if you can pick up FM on it as well as
another tricks you may be able to do, I once had a Bearcat scanner that
could be fooled into going out of band by hitting the decimal point.

>>
My friend Kap suggested importing from Canada or UK. Probably a wiser idea
then taking the scanner apart...check on the pro 96 in canada.

I was wondering if anyone in the group uses the winradio or similar pc controlled scanner. If so, please let me know your likes or dislikes of them. I am interested in purchasing one in the near future, as soon as my home computer is running again.
As usual Murphy's Law still has me traveling 40+ miles to use my brothers computer so I am in no hurry, Just curious if the winradio has impressed anyone in the group.

Thanks,
Walter

helo all.
With the plane that ran off the runway at MEIGS FEILD in chicago, well....I heard the call on my scanner. Besides that, my friend and I turned on our FRS radios, and I was about to tale, and Someone sounded like they were breathing hard, and the most part of the talking that we herd, was "Give me some slack," "10-4, slacks on its way," and "bring me up, i can't find them."

Anyone have some ideas on who was using the channel. It was FRS channel 1. And its usuially silent.

The reason why you can't find them is because federal freq's have not been revealed to the public for a number of years. Just scan the federal bands.

I live in ca but I think even if you did live in Florida and had a scanner. a police officer would not pull you over unless there was another violation. For example you were speeding and he saw the scanner than he would take action. I doubt that they would do it if they thought that was the only violation.

i have read the law about mobile scanners(installed in your vehicles)and it says nothing about limiting to what u can listen to. as long as you are acting/providing a public service or approved in writing by your local p.d you can listen away without being guilty of a second degree misd. it does not say or provide any freqs. that you may not listen to. enjoy your scanning....most police agencys are unfamiliar with our scanner laws exact readings.

Topic: 1987 Message: 1987

It is,

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

And for the scanner laws in FL, My commander also works in the Court here, He is going to get me the law in writing and I will post it as soon as I get it and scan it, so we will be able get to the bottom of that soon hopefully.
In my opinion, I think if you use any wireless communications you should just be ready for someone to listen. I mean if listening to personal problems is breaking the law, then all the psycotherapists would be in jail ???
I still see news crews carry scanners and no one bothers them, except for the one instance a crew was arrested, but just keep it as low-profile as you can and don't go chasing accidents and I don't think anyone will mess with you.

Walter

The full legal output of FRS radio is 500 mW, or half of a watt. There are 14 UHF frequencies designated by the FCC for FRS. I guess there are only 38 tones allowed, since all of the top-of-the-line FRS transceivers that I've seen come with 38 quiet codes, or PL tones as you call them. Some lower quality FRS transceivers that I've seen only come with 15 tones.

If you can shop at Sams Club and possibly Wal Mart you can get a very nice digital
spread spectrum phone for $99.95. Sounds like nothing but static on a scanner and
randomly hops freqs as well. Very nice phone with both caller ID and wall waiting ID
displayed right on the handset. Its a Sony SPP-SS961. And I first bought one of the
2.4 Ghz phones but found that it talked in the clear on 900 Mhz from the handset
with no form of privacy at all. (it got exchanged for the Sony 900 Meg DSS). Also,
the range on the 2.4 gig phone was >>50%<< of that of the Sony DSS.

You ask and you shall receive. Below is the exact Florida Statute related
to your inquiry. I'll leave it's interpretation up to you. I'm sure
everyone's is different. Enjoy....

G. Reaper

843.16 Unlawful to install radio equipment using assigned frequency of state
or law enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor vehicle or
business establishment, except an emergency vehicle or crime watch vehicle as
herein defined or a place established by municipal, county, state, or federal
authority for governmental purposes, any frequency modulation radio receiving
equipment so adjusted or tuned as to receive messages or signals on
frequencies assigned by the Federal Communications Commission to police or law
enforcement officers of any city or county of the state or to the state or any
of its agencies. Provided, nothing herein shall be construed to affect any
radio station licensed by the Federal Communications System or to affect any
recognized newspaper or news publication engaged in covering the news on a
full-time basis or any alarm system contractor certified pursuant to part II
of chapter 489, operating a central monitoring system.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

Yep. It will NEVER recieve cellular bands. Also, if you are trunk tracking, it is programmed to automatically skip IDs that are making a "private call". So it's like having superman in a wheelchair. It had the potential to be the best radio ever, but they crippled it.

From: Travis
Topic: 2001 Message: 2001

I'm looking to buy a new scanner. But I really want one that has "full" unblocked coverage with no gaps. The only way I can get one of these is if I buy it from a dealer in the UK. Does anyone know if I will run into any trouble? Will the package be checked anywhere along the way or do US laws allow you to import them but not "own" them.

It is illegal as a sick bird. Customs cannot check every package that
enters the US, but if they check yours, they will instantly confiscate it.
All the money you spent on it is gone, and then your name is entered into
a database of "no-good-doers" so that all future packages sent to you will
be fully inspected. You may even face criminal charges if they bring them.
Unfortunately and quite unjustly, US Customs views importation of these
scanners in much the same way they view mailing guns, bombs, drugs, and
child pornography. These scanners are contraband as far as they are
concerned. If you don't get caught, OK. But if you do, they'll keep a
close eye on you for a long, long time. You could bet your bottom dollar
that a customs agent or postmaster will x-ray or open every package
addressed to you from now on. I recommend going about it the legal way.
Lobby Congress to make it leagal again.

Personally e-mail me the following...
1. the 8-digit serial number
2. the model number
3. the firmware version and following hexidecimal code
It is obtained by the following procedure: turn on
your scanner while holding the 3, 5, and 7 buttons. It will flash a number
"1.xx" and then it will flash a code xxxxH where "x" can be any one of the
following letters or numbers: 0123456789AbCdEF
Write all of it down and e-mail me.

2009. [SST] Scanning in Florida

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-18 19:36:50 UTC
From: Neal Jenkins
Topic: 2009 Message: 2009

843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined
or a place established by municipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted
or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or
county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal
Communications System or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system
contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

==========> snip <==========

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any
recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter
489, operating a central monitoring system.

==========> snip <==========

Nothing about any frequencies for amateurs, the exemption is clear.

See: Florida Statutes 843.16 for the entire citation

From: Matt Love
Topic: 2006 Message: 2013

I'm almost positive that US Customs (there is an office in every major postal center) x-rays ALL packages coming in from overseas, I am told that they do here in Mpls/St.Paul anyways. This doesn't mean that they're gonna open one up everytime they see a scanner and check it's bandwith but then again it doesn't mean that they won't either.

COuld anyone tell me about Radio shack scanners? I've got a really old 10 channel that my grandfather gave me ages ago and was looking for something with more "bandwith" they had 2 on special the last time I was there, 2 handhelds each for 199$ I can't remember the serial numbers but both said 800mhz trunked something or other on them and one said something about race course channels and something about sports buffs. I don't know much about them, does anyone know if the Radio shack models are easily modified?

i am new to the scanner and bought the frequency book but its for the
police and fire i would like to know if there are any more frequencies.
like the cell phones or cordless phones i was going to try the walmart
radio but havent had time yet will it work at my walmart?
i have a uniden cordless phone can i listen to it on my scanner?
to do any of these things do i need to put or take anything out of my
scanner thanks
michelle

I have most of your answers. What scanner did you get? (model #). I can give you the business band frequencies and cordless frequencies. Listening to cordless phones is illegal though. Just E-mail me, and I will give them to you. Maybee you can help me though! I am from kansas and I am looking for a school in Texas that offers a Criminal Justice degree and an automotive apprentice or degree. They don't have to be the same school, but two schools withing about twenty minutes of each other. Or, if you don't know that, can you tell me if there is any other colleges (junior or community included) near Sam Houston State University? This info would help alot because I want to go to school in Texas. Thanks!
-Just e-mail me for those freqs.

From: Phil Gebhard
Topic: 2006 Message: 2021

Matt:

If you would like to have my two cents say on Radio Shack's Scanners, they are junk, my friend is manager of a Radio Shack near me and he said he would never buy a scanner from Radio Shack. I purchased a Uniden Bearcat BC895XLT from Scanner World USA over the telephone and I love it. I am planning to purchase a hand held Ham Radio from the this company in the near future. Their web site is www.scannerworld.com.
If you have any questions, please e-mail me....fpgi@...

no current RS model will be modifiable to pick up cell coverage, although
other mods are possible. the best place to start is Rich Wells' excellent
site www.strongsignals.net, which has all the FAQs, links and articles you
will probably need.

> radio but havent had time yet will it work at my walmart?

There are thousands more frequencies. Try "Police Call" which is
available
at Radio Shack. That will give you just about everything from police to
the dog catcher to some businesses. Which brand radio is the Wal-Mart
radio?
If it's plugged in, it should work.

> i have a uniden cordless phone can i listen to it on my scanner?

Probably.

> to do any of these things do i need to put or take anything out of my
> scanner thanks

Yes. You need to enter the proper frequencies. The "Police Call" book
has
a neat list in the back which shows what frequencies are used by what
users.
If you wanted to enter all the FRS frequencies, you could look them up
(they're
up around 452 MHz or so).

What do you want to modify them to do? Most scanners cannot be
modified to
receive cell calls, but most scanners can be modified to have SCA
output, an
S-meter, computer control, thousands of channels, etc. It depends on
the
model of the scanner.

First thing you want to do is look in the book and see how to do a search. Start at the bottom andwork your way to the top. You'll find a lot of interesting stuff along the way. If you want to find wal-mart radios, search 150-160Mhz and 450-470Mhz. Your Uniden phone can be found between 43-47Mhz, 902-929Mhz, depending on how old it is. It may be scrambled, in which case it will sound like Donald Duck tripping on acid and speaking Jibberish. If you get into scanning seriously, however, I could sell you a box that descrambles that. Finally, to paraphrase Dante, "Abandon all hope, ye who wish to pick up cell phones on a new scanner." What model is it? I can tell you whether or not it is at the 7th level of unmodifiable.

I will second that the 895XLT is a great scanner for the price. And you can store the
Freq's on your hard drive, and even run the scanner from your computer.. I also bought
mine from Scanner World . They had the best price. . .

What: more distance
frequency: any
body: I have a CB antenna on my roof, I also have a handheld scanner. I bought a converter so now my little scanner can reach pretty damn far. Not to mention that I live on a hill near Dallas, TX.
I am also in the search for some interesting frequencies. And a way to put more power to my uniden bearcat. If you have any tips please let me know thanks

I guess you don't realize that most RS scanners are manufactured by Uniden. If you ever saw the inside of one, the circuit board has this funny little logo that says UNIDEN.... Try to not flame something until you know all the facts. Get a refund on your two cents -- and you might want to tell your friend to learn his product line a little better... no wonder RS is going downhill and has such a bad reputation... managers that don't know and don't care!

What: Weather Frequencies
frequency: 161.650-163.275
body: This is in repsonse to a previous submit of weather frequenices.
The author typed a few frequencies and asked if there were more out there.
Sure are, try these:162.550, 162.525, 162.500, 162.475, 162.450, 162.425,
162.400, 161.650, 161.775, 163.275, 439.325. I am pretty sure that there
are more in the 400 range but not in my area, I just found that one on
accident.

I really hate to rain on anyone's parade, I mean I truly do. But if by some chance they randomly feel like searching you or some idiot says you're smuggling drugs, they'll find the scanner and you'll go to prison because it's the same charge as smuggling drugs or illegal guns. I know the odds are very low, but if you happen to be the unlucky soul who gets caught, no authority will care how much you believe in free scanning.
I don't want anyone here to end up in the same hole as dope dealers and child molesters. Too many times, we are impatient, and we can go about doing things in ways that are illegal. Lots of people did the same thing during prohibition. Most got away, but some went to prison. Remember, the bootleggers didn't end prohibition, lobbyists in D.C. convinced Congress to end it. If we spent less time contemplating how we can get our hands on an illegal scanner, and put that time into sending all of our Voices to Washington, we can beat this thing. That's the true American way. Let Congeress hear us.
If they don't listen, THEN SMUGGLE THOSE PESKY SCANNERS IN BY THE BOATLOAD.

2042. [SST] Scanner repair

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-23 21:04:47 UTC
From: Timko, James B
Topic: 2042 Message: 2042

Hi Gang, am trying desperately to have a couple of scanners fixed, Cobra and Radio Shack scanners. Can anyone recommend a shop(s) in the Vancouver, BC area? Scanners make a great source for picking up active hunting sites. Typically, I tune to a cell phone frequency and will sometimes pick up other hunters communicating via cell phones or other short wave frequencies.

Totally true that most RS employees don't know the products. I was at one in the mall about a month ago, and pointed to the array of two-way radios behind the counter, and said, "Can I take a look at that FRS?" The kid was like, "The WHAT?"

I later asked if they had an extension speaker for my CB, and they led me over to the speakers for personal computers... Duhhhh...

Also, a CB antenna I had gotten @ Walmart for about $5 was the exact same antenna offered @ RS for $25!!! Weird, but still not enough to make me a Walmart fan...

I guess you don't realize that most RS scanners are manufactured by Uniden. If you ever saw the inside of one, the circuit board has this funny little logo that says UNIDEN.... Try to not flame something until you know all the facts. Get a refund on your two cents -- and you might want to tell your friend to learn his product line a little better... no wonder RS is going downhill and has such a bad reputation... managers that don't know and don't care!

The new 2000 Police Call Frequency Book is in now at radio shack!!! The book is also available on CD (but not at radio shack). I just got it yesterday. This is a great book, I have bought one every year since 1990! Everyone with a scanner should get it.

From: my_page_lori@yahoo.com
Topic: 2047 Message: 2047

Is the IMAX 2000 a good antenna to use for a scanner? I was told that
I spent more money than I had to...but will it do the job?

Thanks in advance
John & Lori

2048. [SST] Antennas

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-24 01:03:43 UTC
From: Mark R.
Topic: 2048 Message: 2048

Saw on the internet today how some guy used one of those home wiring gimmick antennas and a F to BNC connector to make a better scanner antenna, at least better than rubber duckie. The gimmick device was one of those devices you'd plug-into your AC outlet and it'd use your wiring in your house as an atenna, made for TV signal reception. He also said this conversion would work on rabbit ears, as he tryed it.
When I saw that device, before learning of this, the local RadioShack store would not carry them, due to ineffectiveness in our area. An hour away from KC, MO and could not pick up their stations any better with the device. Only could 1-800 order it. Now it seems RadioShack doesn't carry it at all anymore, I checked online.

Well, I had this idea before, and just now tryed it. We have one of those ugly fringe TV antennas that everyone had before cable, on their roofs, well ours is in our attic, so it doesn't make the house ugly.
Its unused since we have cable of course, and it gives us the KC stations and all other stations we want so far.
So I found one of its hookups in the living room where the two-wire cable comes down, unscrewed the plate and found that cable, the plate has one of those 3-hole "things". I went to my local Radioshack, bought a new coxial faceplate, a transformer to convert from two-wire to coxial and hooked it all up. Then with a 25 foot coxial cable(maybe should have bought a bit shorter) I connected it to the antenna faceplate, and at the unconnected end, there is a "F" connector to BNC connector, adaptor, so I can hook it on my Pro-91.

Well, will this work better? I will see more of an improvement tommorow when more people are using their cordless phones and certain freqs I know are weak, hopefully are better. Already tonight I've switched between rubber duck and this knew attenna rig and the new setup was beating it. One faint conversation was not being picked up by rubber duck.
My father is not sure if the two-wire is still hooked up to the antenna, safe bet it is, and with an amp on the antenna, he thinks it might hamper my reception some. And the antenna is only made to pick up a certain band and block the unwanted ones. I know there is some improvement in cordless phones, I can pick up an aircraft freq better, which is for an airport in Columbia, MO.

What are your opinions, and does anyone have any proven suggestions and ideas for home-made antennas.
I spent about $20 on this.
Thank You,
Mark R.

We can and MUST start by becoming registered voters. Then, we call our local representatives in both the House and the Senate. Tell them you DEMAND action to stop anti-scanner legislation and you are a REGISTERED VOTER who will organize action to vote them out of office if they continue to listen to the dollars of Telecommunications before their constituents. Remember that YOUR vote has THEIR JOB ON THE LINE. Dollars can influence but dollars do not vote. Your vote can mean UNEMPLOYMENT for these folks if they don't listen. And unemployment is a scary thing if you have it as easy as a congressman.

Just to put my twocents in, the employees dont knwo the products , and their technical service is horrible , i had to send off
my htx-202 for repair , and didnt get it back for 6 weeks , the problem was a resistor had blown ....
Also , if anyone has frequencies for southwest missouri , could you please get them to me? thanks alot!

Amen,
I volunteer to send to anyone by e-mail the name, phone number, and addresses of your state representative, state senator, US Representative, and US Senators. All I need is a zip code.
My state representative says that I am the only person who ever contacts him about scanners. Everybody takes things for granted. I was the first to tell him that he wouldn't be able to use his present TV sets in his home as of 2007 or sooner to receive local stations. I showed him the new assignment tables for digital TV and he was shocked to see that his favorite TV station, a nearby low powered UHF station, will have to go off the air for good. It carries city and county government meetings. There are no provisions for them to stay on. They don't have the money to go digital anyway. The owner and chief engineer of the low powered station told me that.
We need to inform public officials who don't know the score and let the others know as outlined by the person who wrote the last e-mail. I hope the rest of you folks help out. Just a handful of us guys can't get the job done. Everybody who likes scanners has to help to save the hobby.
Regards, BILL

well, if you are running a BASE antenna the radio shack dipole 8 element antenna is a good one i just use a cell phone maganetic maount here in the house, for the base side i would use my cb base antenna since my base radio is in the shop
happy scanning

Is the IMAX 2000 a good antenna to use for a scanner? I was told that I spent more money than I had to...but will it do the job?

Thanks in advance
John & Lori

Mark from a tech standpoint what you hooked up was a great idea. In fact if you look in the grove electronics catalog you will see what is called scanner beam. It is actually a TV antenna on its side. I will give you the drawbacks of the system you used but for the most part its no big deal. Most of the signals listened to on a scanner are sent out using vertical polarization. This is because the signals are intended to be picked up by mobile radios or walkie talkies which use vertical antennas. TV and some FM signal;s are sent out using horizontal polarization. This is because TV antennas are house mounted and horizontal polarization picks up less noise. there is a loss when using a horizontal antenna to pick up scanner traffic but that loss is normally overcome by the fact that you are using a larger antenna than the little "duck" on the radio.

The TV antenna actually does pick up a fairly broad range of frequencies that are used by the scanner. What is important is if the TV antenna is a VHF only, uhf only or a VHF/uhf combo.

Cordless phone channels are right below TV chan 2 and most VHF TV antennas will help in this range. VHF scanner frequencies are between chan 6 and chan 7 TV so the antenna does well there as well. If the antenna is a UHF model than it can actually help for UHF scanner frequencies since UHF television starts at about 500 and goes to 890 MHz So you see a TV antenna is not a bad idea.

There is one more thing to consider. A TV antenna has a very sharp directional pattern. The amount of signal it will develop is 20 or so dB lower if the antenna is not pointed right at the signal source. This is to cut down Ghosts on TV. It can help a scanner if the antenna is pointed correctly but if your trying to hear a station that is on the backside of the antenna it could be worse.

You may find that mobile pick up is rather spotty because of that polarization thing I talked about.

If you would like to try your had at a good antenna for inside then see if your folks will let you climb up in the attic If you can get to the twin lead that is attached to the old TV antenna take it loose from the antenna and build a vertical dipole. This is very easy to do.

If using the twin lead make a clean cut and strip each side back by an inch or so. The using some wires from a junk drawer attach one wire to each side of the twin lead. Suspend the whole thing so one wire is going up toward the roof and the other down toward the floor. They do not have to be pulled tight. At the other end keep using your coax conversion to your scanner. The length of the wires depends on what frequencies your most interested in. For general listening where you want to spy a bit on the cordless phones try

cutting each wire to about 50 inches. If your most concerned with VHF and UHF cut each wire for 20 inches for UHF and above only cut each one for 7 inches. I would use 50 as a general antenna if I were you.

One more thing. Radio shack may still have a small amplified antenna that they sell for use on portable TVs its a little thing that looks like a transistor radio with dual antenna coming out of it. This little baby works well to super charge a scanner if you are located away from most signals.

Hope this helps and good luck. I have been doing this stuff for 30 years and make my living as a radio reporter using scanners so I can remember when I was at your stage and was playing around with many kinds of hook ups.

Have fun and keep learning.

Larry Langford

2061. [SST] Police Call Plus 80+ page ERROR

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-26 23:20:24 UTC
From: Greg Barnett
Topic: 2061 Message: 2061

I work at Radio Shack in Indiana, and get (Like Corey) Police Call Plus every year. It is indeed a wonderful publication. BUT... when I noticed where it gave freq. #/ location (ie. 39.050 name transmiter site) They were for the East coast not for Ind. Ill. Wis. and KY (Vol 4)there were approx. 83 pages in error. We contacted the buyer in Fort Worth and he was aware of it. We pulled our books. Till we get corrected copies. The rest of the book is fine, and does not effect all Volumes in the U.S. Just ours in Ind, and the other three states listed above, and I suspect The Volume 2 (Delaware, Maryland, New Jersey, & Pennsylvania.) I called a couple of Radio Shacks there and they checked their books.... Sure enough they had the listings for Vol. 4 I am not knocking the book, I thought I would tell you so you would be supprised. If you can live with it, maybe they (Radio Shack can give you a good price) Greg Barnett, Brazil Indiana

2064. [SST] On-Line Petition

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-27 03:29:58 UTC
From: Rich Barron
Topic: 2064 Message: 2064

I think Stupid Scanner Tricks can help out a bit by starting an on-line petition for anyone interested to sign. If someone would repost the main info (link to the actual bill, breif description and implications) and maybe a volunteer to help gather rep info we could get this up very quickly and make sure that our voices are heard. With 300-500 visitors a day to the old site I'm sure a hand full of folks will sign up. :)

BTW - eGroups scrambles e-mail addresses to protect you from spam bots. If you need to post an e-mail address to the 960+ subscribers (wow, almost 1000 - tell a few friends!) do it like this.

my e-mail is: "rbarron at exo.com"

and it won't be lopped off.

I welcome your comments and suggestions on this issue directly to my e-mail that I just posted above.

Hi Folks,
I recently bought a scanner for my father in law, as his interest was to listen in on the Barges and Boats navigating up and down the Mississippi. He lives in Southern Illinois near the boarder of Missouri.
I was wondering if those frequencies would be allocated in the marine band or if they had a section allocated for themselves.
Thanks.

I aggree but I think saying that the criminal element could benifet is a bit of a lame excuse. I'm sure that there are many people here that know much more about this topic than I but don't certain states allready outlaw scanner ownership by covicited felons? I mean the pry bar is probably one of the most utulized tools of the burgalar, but we certainly couldn't ourlaw prybars.

Thanks for that info!! I am not a policeman nor do We have any in the family yet I wil do my BEST to spread that info to every human I can .You know alot of negative stuff is heard about the police I my self have had cops pull me over once treat me like dirt thinking I was invoved in some attack I was in school they realized it was not me no were sorry but I understood ...they face garbage all day we should start hearing all the good they do and they should (the Police) know that there are good law respecting citizens such as myself out there,who will and have done aything to help the police

2072. [SST] Scanner Petitions

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-27 17:51:45 UTC
From: Rich Barron
Topic: 2072 Message: 2072

The scanner petition is now on-line. But before I release the URL and put links up it still needs some more information about how HR 514 should be changed and what problems it will cause (in a breif outline format, please). Once we get the info we will let you all know the URL so you can 'sign' if you wish. I would send it out now, but we have a few blank spots that need to be filled in.

We have a link to the bill itself on-line, but other resources about the bill would be appreciated and links will be added as is reasonable.

I will also be making a button for those of you that have sites and want to add a link to the petition.

If there are any other petitions you would like to see that are radio related, we will be willing to host them as well on a request basis. (Cop Killer petition? Don't go digital petition?) All petition requests MUST include a statement outlining:

1) The name of the bill, law, or decision in protest.
2) A link or e-mail address of at least one person/entity involved in this decision.
3) An outline of the faults of the bill, law, or decision.
4) An outline of the remedies (ways to fix it) that the petitioneers would agree on.

Thanks for your participation!

Rich Barron
Stupid Scanner Tricks

Stupid Scanner Tricks will only be hosting the petitions. We may or may not actually endorse the content of the petitions.

To everyone who received that message about Mumia Abu-Jamal, please do not just believe everything you read without researching the facts. I do not claim to be an expert on this matter, but why do you think all of those people are supporting him? In addition to the people already menitioned, there have been many music artists who have show their support for him through their music and there have even been full movements to get him off of Death Row. Like I said, I am not an expert on this, but this is what I know: Mumia Abu Jamal was a Black Panther and a revolutionary journalist, who was known as "the voice of the voiceless." His journalism acted as the voice for those who had been bruatilized by the police during the Frank Rizzo years. He was accused of having killed a police officer in Philadelphia 17 years ago, however here are some things you might want to consider: during his trial, all but one of the black jurors were illegally removed, Mumia was denied his constitutional right to represent himself, evidence was held fromt he defense, and it has even been shown that witnesses used by the prosecution were coerced into lying. On top of all that, the judge in this trial was a former member of the Fraternal Order of Police, who by the way, has put more people on Death Row than any other Judge in U.S. history. Human rights organizations such as Amnesty International have acknowledged that the basis of Mumia's death penalty conviction were his political beliefs expressed in his writings as a teenage Black Panther. Now, for all you skeptics out there, this wouldn't be the first time someone has been persecuted because of their personal beliefs. Does David Koresh ring a bell? I didn't agree with his beliefs one bit, but I've researched the whole incident and came up with some pretty disturbing facts. Don't think that I am totally against the police or the government, but you have to realize when this took place and the state of racism in society at that time. Another crucial piece of evidence I forgot to mention was that the medical examiners report showed that Officer Faulkner's wounds were made by a .44 calibur gun and not the .38 calibur gun that was owned by Mumia. I am not asking you to just blindly believe what you are reading, but to research for yourself and to reach your own conclusion on what happened. My condolensces go out to the family of the dead officer, but we should not let the viciousness of the act cloud our judgement. If you would like more info about this matter, you can visit these sites:

Actually, the ME noted that he thought it may have been a .44, in
his opinion, and he's no ballistics expert. I think the fact that several
times through appellate courts have not overturned his conviction
speaks volumes.

Motorola Bisiness radios are differenciated by the color of the Dots on the
bottom.

Red Dot radios are all on the same frequency, as are Blue Dot radios.

Now, as to the exact frequency of these, I have no clue. All I know is
that they are in the 400Mhz range.

Andrew

2082. [SST] RadioShack Handheld Scanner Antennas and "Police Call"

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-29 02:06:13 UTC
From: Mark R.
Topic: 2082 Message: 2082

If you are still using a rubber duck antenna on your handheld scanner, wake up and goto RadioShack.
Buy yourself a $9.99 handheld scanner telescoping antenna.
I did and it sure works alot better. I'm picking up signals in my neighborhood, that would not have been picked up by my standard rubber duck on the Pro-91. I'm talking about signals from just a few houses down.
You extend or retract its 9 sections to best pickup what you want to hear.

Also, to comment on Police Call, when I bought the above antenna yesterday, I picked up this wonderful new edition. It serves my needs greatly, and I'm only dumb for not fully reading the 1999 edition, and they made the 2000 even better. Pick up a copy, what are you waiting for?

Happy Scanning,
Mark

Also, all red dot radios may not be compatible with each other. They may
have different CTCSS tones.

From: Monica
Topic: 2056 Message: 2086

Your 45 ft. antenna mast will do just fine with a "DISCONE" antenna for scanning. Not only is this the special type of antenna needed for picking up sattelite and space shuttle missions, but it also sreves as a transmitting 2-meter ham radio antenna. Radio Shack does sell a nice discone antenna. Assembly is required, but it's very easy to put together. Make sure you tighten the small locknuts real tight on each antenna arm, or they will fall off with time. I have used one for years after trying many antennas. Discones are the best.

2087. [SST] Re: stupid question

From: Monica
Topic: 2080 Message: 2087

I'm not sure in what order, but here are some "Blue Dot, Purple Dot, Red Dot" freqs:
464.500
464.550
469.500
469.550
154.600
151.955
151.625

Try these in your scanner. Whatever you hear on a rubber duck antenna is less than two blocks away, since the watt allocation is only 2 watts.

A San Francisco 911 call came a high school's janitor. It was Saturday, the school was locked up, but the janitor witnessed a group of young teens break through a window and had stolen many popcicles from the freezers in the cafeteria. They were taking gallons of ice cream as well.
The dispatcher added to the responding units:
"And get there before the evidence melts."

I wouldn't be so sure of that. Here it's illegal to possess a pry bar unless you are a licensed building contractor. It is, however, rarely enforced. At this point in the anti-Scanner battle, nothing would surprise me.

From: Corey Smith
Topic: 2056 Message: 2093

I have this radio shack discone antenna. I use it hor 2M and 440 Ham transmitting. It gets out great, SWR on it is 1.0 - 1.1. It won't recive very well. I have to use another reciver with a duck antenna to recive when using my HAM with the discone antenna. I have it running through about 50 feet of cable. Do you think that I need an inline amp for reciveing. Do you know of any general coverage amp that won't blow up when I transmit with my ham?

Thanks,
Corey Smith

2094. [SST] Two way radios

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-11-30 00:46:43 UTC
From: Doug Holloway
Topic: 2094 Message: 2094

This isn't strictly a scanner related question, but hopefully some of you knowledgeable folks can help me out. My wife and I spend an occasional evening playing the slots at the casino. When we arrive, we usually split up and search for the loose slots individually. I thought it would be a good idea if we had a pair of two way radios to contact one another if one of us happens to get lucky. I know nothing about two way radios. What features would be essential,especially for my needs, and which could be considered unnecessary bells and whistles? Also, if anyone can recommend a specific model, that would be helpful as well. Doug

Has anyone checked out the icom iq7a ??
It is a really good 2 m / 440 and a even better scanner once you learn to use it.
It was a hard thing to learn but ever sense I learned it I haven't been let down.
If anyone has it let me know your thoughts on it as a scanner and maybe their are some features I dot know about.

Consider getting yourself a pair of FRS transceivers. You will definitely need ones that transmit at full legal power, which is 500 mW. That will ensure the best possible transmission range between you and your wife. You may not need ones with all 14 available FRS frequencies and all 38 quiet codes, but having them will greatly reduce the chances of any interference from anybody in the vicinity who also is using an FRS transceiver. You probably won't need ones that are water or shock resistant though. I own a Radio Shack FRS transceiver, which I reccomend, and the stock number for it is 21-1810. It has all of the features mentioned above, plus others. It's on sale for $69.99 per transceiver now; the price is normally $119.99. This radio is discontinued now though, so don't delay buying it.

Try the Motorola FRS radios. They have a two mile range, and have 14 channels with PL tones. PL tones are for privacy (PL means private line), and the radio's are very compact for confort. Check ebay for a good deal on these radios. I recommend the Mototola brand, mainly because I've owned several different radio's, and they seem to be the most dependable. Good luck, Chris

P.S. Ebay's websight is www.ebay.com (Go to photo & electronics)

What you probably want is a set of FRS (Family Radio Service) radios... The one that have a 2+ mile range advritised would probably work OK in a casino... Plus, if you look at the frequency list at the end of this message, FRS share frequencys with GRMS (Another name for Business radios...) so you might beable to pick up/mess with the casino's security and or maintenece staff!

Just be sure that you get two with several channels
and that use privacy (CTCSS) tones so you and your
wife can have a channel all to yourselves.

FRS radios would be a good choice of equipment to use in this situation
but I doubt the casino security personnel would be happy about you using
two-way radios while in the casino. You may want to call ahead and ask the
management.

Doug,
If I were you, I would get two motorola fr5o's, they are about $49 apeice.
That is very reasonably priced. They are very compact and lightweight.
There is 14 channels to broadcast on and the range is about 2 1/2 miles. It
has automatic squelch settings and a call button. Mine work great!

I think it is illegal to use them in the gaming area, itself but you
can use them out side of the gaming area

the reason is, the radio could be consider as a gaming device and it
would be giving you a advantage

over other people like getting inside information I think they have
it posted NO ELECTRONIC DEVICES

that includes cell phones and pagers. check with the casino 1st.

I stayed at Baley's one year and I brought my hand held and scanner
with me and was walking around the
hotel then I talked with a the security guard about my radio's and
he said he did not care if I had them
but don't take them into the gaming area I saw few other people that
had radios
DAve......

I did some checking myself and Casino Windsor, Casino Niagara, and
Casino Rama DO NOT allow personal two way radios, or cell phones in the
Casinos. You can be arrested and band for life from ANY casino in the
provence of Ontario.

there are several areas that will help you make a J pole anntenna and they workjust great and you can cut them any band or you can make a capped variable anntenna using a variable capacitor adjusting it up or down and this is out of your junk drawer good luck. the j poles are made out of copper water pipe

radios. What features would be essential, especially for my needs, and which could be considered unnecessary bells and whistles? Also, if anyone can recommend a specific model, that would be helpful as well. Doug

Consider getting yourself a pair of FRS transceivers. You will definitely need ones that transmit at full legal power, which is 500 mW. That will ensure the best possible transmission range between you and your wife. You may not need ones with all 14 available FRS frequencies and all 38 quiet codes, but having them will greatly reduce the chances of any interference from anybody in the vicinity who also is using an FRS transceiver. You probably won't need ones that are water or shock resistant though. I own a Radio Shack FRS transceiver, which I reccomend, and the stock number for it is 21-1810. It has all of the features mentioned above, plus others. It's on sale for $69.99 per transceiver now; the price is normally $119.99. This radio is discontinued now though, so don't delay buying it.

Try the Motorola FRS radios. They have a two mile range, and have 14 channels with PL tones. PL tones are for privacy (PL means private line), and the radio's are very compact for confort. Check ebay for a good deal on these radios. I recommend the Mototola brand, mainly because I've owned several different radio's, and they seem to be the most dependable. Good luck, Chris

P.S. Ebay's websight is www.ebay.com (Go to photo & electronics)

What you probably want is a set of FRS (Family Radio Service) radios... The one that have a 2+ mile range advritised would probably work OK in a casino... Plus, if you look at the frequency list at the end of this message, FRS share frequencys with GRMS (Another name for Business

radios...) so you might beable to pick up/mess with the casino's security
and or maintenece staff!

Just be sure that you get two with several channels
and that use privacy (CTCSS) tones so you and your
wife can have a channel all to yourselves.

FRS radios would be a good choice of equipment to use in this situation but I doubt the casino security personnel would be happy about you using two-way radios while in the casino. You may want to call ahead and ask the management.

Doug,
If I were you, I would get two motorola fr5o's, they are about $49 apeice. That is very reasonably priced. They are very compact and lightweight. There is 14 channels to broadcast on and the range is about 2 1/2 miles. It has automatic squelch settings and a call button. Mine work great!

All you need to do is get a little earpiece like the Secret Service people wear and get a mini-clip on mic. You'd be surprised at how discreet the setup is. I saw some of those FRS radios at Sears that were made by Cobra and I think (but wouldn't swear to it) that they used speech frequency-inversion scrambling like some cordless phones. FRS radios are one of my most popular listening targets, and I'm sure that in a big city, you wouldn't want a scanner fanatic to compete with you for the hot slots. Also, I'm taking this Discrete Mathematics course and we do a lot of work with gambling probabilities and computer science. I can guarantee that more than 66% of slots are rigged. I found this out after plotting pure random probability with actual winnings. Sometimes, it's been rumored, undercover casino employees play the part of and unsuspecting lucky soul that hits the Hot Slots. This draws attention and boosts playing.Of course, the machines are rigged to temorarily pay off until the actor leaves, at which time they return to normal programming and payoff only 33% of the time that probability says it should.

Get the Icom IC-W32A - It is bad ass! It is an awesome HT. Dual bander, recive two frequencies on the same band at the same time! I don't know what exactly what you were looking for, but I saw your message and thought that I would let you know.

2117. [SST] Re: antenna making

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-01 15:15:57 UTC
From: brown82@MARSHALL.EDU
Topic: 2095 Message: 2117

Step 1:
Take 2,953 and divide it by the frequency in Megahertz that you want to listen to (eg. 2953/144Mhz = 20.5 inches). This is 1/4th of a wavelength in inches. Now cut sections of thin copper wire to this length.
Step 2:
Take 8,859 and divide it by the frequency in Megahertz that you want to listen to (eg. 8,859/144Mhz = 61.5 inches) This is 1/2 of a wavelength inside of 72 ohm RG-59 TV coax. Obtain a lenth of this stuff and cut it to an odd multiple of the number of inches you got in step 2 (eg. 1 x 61.5; 3 x 61.5; 5x61.5; 7 x 61.5 et cetera, et cetera, depending on how long you need.
Step 3:
I know "solder" is exclusively a noun and NOT A VERB to many people, but this step requires you to SOLDER SOMETHING! strip the end of the coax and solder one of the wires from step 1 to the center conductor and the other wire from step 1 to the outside shield. MAKE SURE THEY DO NOT TOUCH.
Step 4:
Tape your antenna to any non-conductive surface like your wall, your bathtub, your window, your dead tree in the back yard, your china cabinet, I don't care BUT DO IT THE FOLOWING WAY:
take the wire you soldered to the center conductor and tape up [by up, I mean in the vertical direction facing the sky, the place where airplanes fly, the clouds, heaven or the home of the holy deity of your choice. NOTE: the last direction may confuse Satan worshipers]
take the wire you soldered to the outside shield and tape it down [down is the opposite direction of up. It is where the dirt, sand, loam, soil, gravity and stuff comes from. It is also where the Devil supposedly lives.]
Step 5: The final step.
Go to Radio Shaft and buy the connector to fit your scanner. Do you see where your antenna is taped up and down? Good. Now go to the other end and connect your adapter, after all I don't want you to ruin all that hard work. Gratulieren meinen Freund oder meine Fruendin! You have successfully built a 72 ohm vertical dipole antenna. Now, you can plug in your scanner and enjoy the 3 or 4 dB gain over using a rubber duck.

Now that is odd... no CELL PHONES?! I thought that the only place you couldnt use a cell phone was a hospital... but perhaps they have the same reasons... maybe a powerful enough radio transmission could screw up the slot machines or something.

Andrew

in regard to FRS/GMRS radios.....every model from every company that i have seen, is designed to look like those walkie-talkies we all had when we were kids.....make them look professional, like an amateur or commercial radio.....i would be embarrassed to use these current designs in public.

Well, Jim the icom will scan all bands at once you can program 200 channels you get from 29 to 1300 no gaps its a really good radio with great sensitivity.

I know this might be a repeat for some.
Again, my apologies.

It is a virus!
A relative was opening their email at Hotmail, and their friend accidentally got infected, and my relative, unknown to me, opened it. What it does is infect your computer and send copies of the program to everyone in your address book. Get Norton, and if you want, I'll send manual instructions for removing later.
My apologies,
Mark R.

I also tried the below web sites, however they did not open up.. said no such site.....
I am also wondering if anyone could tell me the easiest way to install a "blocking diode" to a small solar panel that was once used for an outdoor solar powered motion detector. It puts out around 13 VDC, aprox size is 9" sq. I have lots of electronic parts from broken devices, so there must be many type of diodes I could use? If anyone could help, I would greatly appreciate it.
Greg
here's two "good sites u should start from"http://rob.aol.com/~cb/cblinks.html also http://dmozorg./recretion/radio/11_meter/ you'll find alot of info on cb/scanner's how to? where you can buy? all kinds antenna's and parts (((just click)))) and go down the row till u find what you are looking have fun:)

Mike:
I purchased a Uniden Bearcat BC895XLT Trunktracker Scanner from Scanner World USA (telephone 1-800-476-8050) in New York for $234.99 no tax outside of NY. It is a great scanner, you can program 300 channels, coverage is from 29 MHz to 956 MHz. Other features include: Trunk System Communications and Tracks Motorola type I, II, III Finds groups or subhroups within a group of your local frequencies. Allows you to separate police, fire, or whatever group you want from your local trunking system (on the800MHz band) and not be forced to listen to a combination of all services at the same time.

From: brown82@MARSHALL.EDU
Topic: 2121 Message: 2126

You should look for the abilty to track Motorola type I, Motorola type II, Motorola hybrid, and MOST importantly: Ericson EDACS. The pro 90 left me high and dry because it won't grab EDACS (which is the ONLY trunking system in use in this area) You can tell if the transmission is EDACS because it does the following:
As soon as the person keys up, the radio makes a quick "fart" noise called a "preamble." This transmits their ID# and channel request info. As soon as they let off, the radio goes BEEP-----BEEP-----BEEP----BEEP like an annoying alarm clock. Your scanner thinks the radio is still tranmitting, so it doesn't scan until after the beep goes away. Unfortunately, the reply on another channel goes away by that time, also. If you scan the 800Mhz trunked band (855-864), you will hear the data control channel. If it sounds like a bunch of pissed off hornets, it's Motorola. If it sounds like a Diesel engine idling, it's EDACS.

NOTE: These systems patch into the phone lines whenever someone tells it to. This gives cops the opportunity to talk to their girlfriends over the radio (as I have heard with Columbus PD and with American Electric Power workers. RadioShaft scanners are pre-programmed to identify these calls and cut out when they happen. You can listen to them with an ordinary scanner, but not with an expensive trunk-tracker? HELLO!

I'm sure that just about any diode you pluck from a device will work. Diodes come in many forms: silicon, germanium, selenium. The big differences in specifications are PIV (peak inverse volts), max amps, and FT (frequncy of transition). PIV is the maximum voltage that it will prevent from going backwards before it breaks down. Max Amps is the lagest current you can run through a diode before burning it. Frequency of transition is the maximum speed it can catch a reversing current. Your average diode you pull out of a radio may have a PIV from .5-20 volts, FT of 1Mhz-100Mhz, and .01-.5 amps max. You can find some killer diodes in old microwave ovens. They have a PIV of perhaps 10,000 volts, FT of ~4000Mhz, and can handle several amps of current at lower voltages. Just be sure to short the huge capacitor first, unless you want to see what several thousand volts feels like (trust me, anything above 240v hurts).

Ok. Trunk tracking is using a scanner to follow conversations on a trunked radio system. These sytems operate much like cell phones in the fact that they don't always transmit on the same frequency. A computer controls what channel a radio will use at any given instant. After the transmission is complete, the reply may not be on the same channel. These transmissions are hard for even a seasoned listener to successfully monitor. TrunkTracker scanners follow the transmissions for you. Well, almost. Nothing's perfect.

The following is from http://www.ScanerWay.8m.com

Trunking is used in many states by the police. Trunking was intended
for keeping people like us with scanners from hearing them.Trunked
systems automatically send out a signal to switch frequencies. The
other radios hear the signal and automatically switch to the different
frequency so none of the users notice the difference but people trying to
listen on a scanner have a very hard time. Now many companies make scanners
that can follow the trunked systems and listen along.

2135. [SST] POLL: Best Scanner Features?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-04 06:09:03 UTC
From: rbarron@exo.com
Topic: 2135 Message: 2135

I really wish my scanner did...
Or
I bought this scanner because it did...

Please select one or more of the following:

o Trunk Tracking
o 400+ channels to hold frequencies
o No frequency gaps (gets cell phones) across wide freq. range
o No frequency gaps (no cell phones) across wide freq. range
o Can pick up cell/cordless phones
o Killer squelch and sensitivity
o Computer controllable or connectable
o I've got a few scanners - each with a specialty

by going to the following Web form:

http://www.egroups.com/vote?id=944287743073&listname=stupidscannertricks

Thank you!

2136. [SST] Want to hear EVERYTHING?!?

Yahoo group: stupidscannertricks (1998 — 2000)

From: Andrew Koch
Topic: 2135 Message: 2136

If you dont mind shelling out $2,100 U.S....

It's avalible IN the US, form a US company, without Import restrictions...

The reason... it's NOT a scanner... it's a piece of TESTING equipment.

A.W. SPERRY
RF 3200 Field Strength Analyzer

The RF 3200 is a powerful tool for telecommunications, cable TV, satellite
and radio industries. Receives and measures signals of wide and narrow band
FM, AM, and single side-band. Frequency range is 100kHz to 2060MHz.
Measures frequency, displays spectrum of signal, measures level of signal
in dBm and dBu. Displays single channel, multi-channel and 2 channel
difference. Scans channels and will output audio through built-in speaker.
50W input, BNC connector or detachable antenna. Its backlit LCD screen
offers graphical output and access to the set-up and measuring menus.
RS-232 output with PC software and cable included. Six AA batteries
(included). 9 x 4 x 1-3/4", 1.4 lbs. (Korea)

Frequency Range: 100kHz to 2060MHz
Frequency Step: 5kHz to 6MHz in multiples of 5kHz and 6.25kHz
Frequency Accuracy: ±25 ppm
Max Input Voltage: 5Vrms
Level Measurement Range: -10dBm to 40dBm ±0.5dBu
Frequency Counter Bandwidth: 9MHz to 2060MHz resolution to 1kHz
Input sensitivity: 9MHz to 2060MHz = 120mV
50MHz to 1500MHz = 50mV
2MHz to 2800MHz = 500mV

Topic: 2138 Message: 2138

My room mate just got a new VW Betle, and I'm wondering what frequency the remote control is running at.

I'm thinking that it's at something like 10 or 20 Mhz, but I really dont know...

My frequency counter dosnt register anything from the remote... (Geez, I wish I had the field stringh analizer :)

From: Monica
Topic: 2143 Message: 2143

Do not buy a Uniden PC 122 citizens band radio. I've had 4 of them, and I got to know the repairmen at the shops I took them to. All the repairmen say it's a very popular radio, and it is a "fair" radio. But I've had nothing but trouble with the finals burning out and audio dead keys. All 4 of mine are constantly needing repair.
Uniden does make a "Grant" model. This is exceptionally better. Has sideband. (Uniden Grant)
Cobra has the best stuff though, just don't get cheap. Spend $170 on a Cobra GTL 148, or another Cobra with sideband. Not that you need sideband, but the better radios are the ones with sideband capability. The straight AM 40 channel radios without sideband are all made to cater to a fool's money.
Radio Shack...here I must say without a doubt ALL their CB radios are junk. Radio Shack does have some good stuff in scanners, but their CB radios are worthless.
Upper channels are illegal to USE, but not to MONITOR or have them in your radio. It is illegal for the repairman to perform this task, but once it is done the radio is legal. Only if you are caught transmitting on the illegal cannels will you face fines. And the repairman for performing the work.
Upper channels range from 27.445mhz as high as 28.500mhz.
Lower channels range from 26.665mhz as low as 25.000mhz.
Most of these channels are military, and Nasa. But they are rarely in use. The 10-meter ham radio band does take a large portion of the upper channels around 28.000mhz to 28.500mhz.
Hope this helps.
John

If anyone is interested, I have a NetSet Pro 46 which
is identical in every way to a Realistic Pro 46, that
I no longer have any use for. It has 100 channels and
is direct entry programmable. Yes, the 800 - 956 mhz
is unblocked. It's in very good condition and works
perfectly. Rubber duck antenna, rechargeable nicads,
and charger/ac adapter included. Only $140 shipped,
but act fast, or this baby's going on eBay Sunday
night right after the Patriots - Cowboys game! (Please
email me directly, lets not clutter up the forum!)

With things that put out less than .5 volts RMS, you can connect them directly to most frequency counters (even though they say never to do that). It should say somewhere on it what the max voltage is. My girlfriend got a set of those things to drive around with her roommate. One was on 27.105 Mhz and the other was on 47.something. I know this because I tuned my scanner into them while they were modulating and when I found the frequency, I showed her that the little controller fades away at about 20 ft. I then proceded to my car and drove 4 blocks away where they could still see me through the window. I cranked up my 300 watt bi-linear and let it rip on channel 12. I drove her little remote control car from nearly a mile away (well, I made it twitch and do crazy stuff by mimmicking the buzzing noises that the controller made). Hah hah. They both got a laugh.

You may want to buy a used radio, but if you do, invest $20 in a Radioshaft SWR/Power meter. You'll need one anyway. Before I ever buy a radio, I hook it to the power meter and see if it puts out 4 watts. If less, the finals are on their last legs. If much more, somebody probably screwed with the radio to put out more power, thus overloading all the critical components and ensuring an early grave for the radio. Get a nice 4 watt radio. Then get a linear amp and blow 'em out of the water. Remember: even with power, the antenna makes all the distance, I mean difference, I mean BOTH. High SWR's will burn up the best radio. I have talked 20 miles on a $20 handheld walkie-talkie with AA batteries. It's no secret or black magic, I just ran it into a ground plane antenna. Anyone that tells you a certain radio's electromagnetic waves go farther than another radio's electromagnetic waves of the same power, they are so full of bull@%&! that their eyes are probably brown.

I would strongly recomend not using the upper channels in the 10 meter band unless you have a amature radio license, the FCC is taking a big step in enforcement of illigal operators on amature bands , just giving you fair warning.

Brown had some advice about antenna verses amplifier for distance and I agree with Brown hands down. A CB needs a good antenna to kick butt. First things first - a good antenna for your rig. Then perhaps a linear amplifier later.
The ten meter bands that are within range of a "freaked" CB radio are morse code only. Some ten meter freqs are voice, but the 10-meter which you will be listening to on your CB will be filled with morse code. ANY voice communication is automatically identified as a pirate source since even ham operators are not allowed to use voice in this ten meter range.
I've monitored these channels with my ham licence legally with a "freaked" CB radio. They are very quite. And for 9 years I have never once heard anything over the "freaked" channels that sounded legitimate - lower or upper channels. There are loads of voice chatter using CB lingo though, but much less noisy than the regular 40 Cb channels.

Topic: 2056 Message: 2158

I agree with that. I use a monster TV antenna and I pick up medium
power FM stations from 200-300 miles away. Best part: I got the antenna
for free because the dude had DishTV and didn't want the antenna anymore.

The FCC allocates the bands. CB has 40 channels.
Anything outside the frequency band covered by those
channels is illegal. Riley Hollingsworth of the FCC
will be happy to let you know this. I understand he
will be addressing this issue in the upcomming year.

I have a BC147XLT and would like to know any mods for it. It only has 25-512 with gaps. I would like to listen to cell phones or something else above 512. Any help will be greatly appreciated. Thank you.

There is an excellent mod for the icom ic-q7a. It is difficult and if you
are not familiar with surface mount components; I would not recommend it.
If you are willing to take a chance (voiding your warrantee and possibly
breaking your rig) here is what you have to gain.
Full transmit 140-170 and 400-470mhz
Receive TV channels 1-12 also.

The information can be found at http://radioamateur.com/icq7/

I have been told that there are also computer programs that can open more
functions and freqs. I don't have any info on that but a lot of info is
available by searching for radio mods and icom.

Simple answer legally NO
technically possible but would usually require using 2 channels.

Stupid Scanner Tricks

---snip---

Bonjour,
Je recherche actuellement un ICOM IC-R10 ou portatif équivalent depuis beaucoup
de temps, sur tous les sites francophones (Belgique, France, Canada ?) mais sans
résultats. Si par hasard vous détenez ce type d?appareil et que vous souhaitez
vous en débarrasser contre un bon prix ou si vous connaissez un endroit qui
commercialise ce produit sans autorisation ministérielle requise, merci de m?en
informer.
Je suis prêt à mettre le prix FORT.
Je suis vraiment désespéré car cela fait maintenant beaucoup de temps que je
cherche.
Merci d?avance, et sincère salutation.

2176. [SST] UNIDEN BEARCAT BC860XLT

IS THERE ANYTHING I CAN DO TO MAKE THE "DELAY" WORK ON THIS SCANNER. THE BEARCAT 860XLT WORKS GOOD, BUT DOES NOT PAUSE ON THE FREQ. IS THIS A FACTORY REPAIR? I HOPE NOT!

ARE THERE ANY OTHER "TRICKS" TO GET MORE OUT OF THIS UNIT.
THANKS......
FRITZ

2177. [SST] Re: descramble

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-09 14:46:51 UTC
From: brown82@MARSHALL.EDU
Topic: 2062 Message: 2177

I see that there is a great interest in my descrambler. In an effort to keep the forum from becoming too crowded with personal inquiries about this device, I'd like to ask that my information be posted and also ask that any further inquiries be sent personally to the address at the bottom.

Size is about 2.5"X 2.5"X 5". It will work with any scanner that has an earphone jack. It has an on/off switch and works with 2 knobs. It runs on 9 to 13 volts DC. It will descramble speech inversion used in cordless telephones and by police (the radio transmission that sounds like Donald Duck). It IS NOT PERFECT. After the signal is descrambled, there is still a little bit of tone left, but this could go away with an audio notch filter (I didn't build one in because I wanted it to be small). I will sell it for personal hobby use - that means that I never intend it to be used to illegally descramble police. After it is sold, its use is no longer my responsibility. It is legal to descramble your own cordless phone, but it is ILLEGAL to descramble police. With that in mind, if you still want to buy it, e-mail brown82@...

If you buy a RCI 2950 you will have a built in repeater access This radio will
do 10 and 11 meters... 25W out of the box. I have owned one for many years
(since '92 first production)
It's a nice radio. Go here to order - - - > http://www.copper.com
Good luck

2181. [SST] Re: repeater for CB

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-11 03:44:35 UTC
From: brown82@MARSHALL.EDU
Topic: 2169 Message: 2181

Anything is possible with the technical expertise. Just remember the following. You must have several frequencies to communicate with the CB. You need one frequency to change channels, one to transmit and one to receive. Depending on how far away you want to put your transceiver, it may be easier to use multistrand telephone wire to connect all the important stuff. Example: Take the faceplate, microphone, speaker, and remove all circuit connections (on most modern radios, there is a small wiring harness that connects these). Leave your faceplate in your house and install the guts of the radio on your tower. Now, run that telephone wire and use it to connect all the leads you cut. Now, you've got a remote control for your radio, next best thing to a repeater.

Topic: 2143 Message: 2182

Mr. Steve B. you mentioned an FCC agent named Riley Hollingsworth. And you said,"He will be happy to let me know" that CB radio has only 40 legal channels. I am aware that FCC agents can give fines up to 20,000 dollars for transmitting outside of the legal 40 channel allocations. Perhaps you are threatening me ?
I don't know why you mentioned an FCC agent by name, adding that he is happy doing his job, and that I will make him happy instructing me on the 40 channel limitations.
We scanner enthusiasts are all very UNHAPPY about the FCC controls and unconstitutional power they yield over the markets and manufacturers. If you are enthralled by listening to this Riley Hollingsworth lay down the laws and litigation then why are you on this message board except to promote this control ? Your mentality makes SST a very unsafe place to express thoughts.
Who's side are you on ?
John

I agree that the FCC force is unconstitutional, but try getting the US Supreme Court to listen. They're currently busy debating whether or not you really have the right to remain silent when arrested. The framers of the United States Constitution were troublemakers. Today we call those types of people militants, whackos, "Homegrown Terrorists", Gun nuts, subversionists, Anarchists. If scanners were around in the late 1700's, the fathers would more than likely endorsed their use as a tool to keep check on the actions of goverment officials. They've taken away our rights to defend our homes and families, free speech, et cetera. Do we have an obligation to obey laws that infringe on our inalienable rights? It is a high crime to even write laws like that. Let's face it. Since the industrial revolution, we've slowly signed away all our rights at the request of big business. Our forefathers volunteered to live in Ghettos while they worked for the railroad, the mines, and the factories. Cornelius Vanderbilt sent more people to the Ghettos than Adolf Hitler and Rudolf Hess. And think about the children that worked to death while the government turned a blind eye. They didn't want to lose the industrial taxes they collected. Is money more important than your freedom? Here's the answer. It's more important than your life.

From: brown82@MARSHALL.EDU
Topic: 2183 Message: 2192

Get a quarter wave -102 inch antenna. It's kinda' big, but it is the most efficient antenna that will fit on your car, unless you want to try a Moonraker 4 (hehehe). Even better, it was only 14.99 last sale at Radioshaft. For best results and highest power transfer, feed it with a 16 1/2 foot piece of RG-8U. I have one on my little toyota and it makes it look like a remote controlled car, but I get out all over town (just like my ex-girlfriend).

Hi, there,
How much for the descrambler? Chances are you'll sell it quickly, so I wonder if you'd be willing to build another one for me. How much would you charge for that?
Thanks,
Paul

2194. [SST] need more information on scanner

Hi guys, I was wondering if someone could help out in get more information on the scanner model # ms200.....by Relm Communications. I herd that the scanner has petty good features but the selectivity (adjacent channel) is not all that good.
Could any one please get back to me about this before I go and purchase this unit.Or is their another scanners that have this same features: Tone decode (ctcss, Dcs).......Thanks....Ray

First, isolate the problem. Does it still light up? if so, evrything is getting power. Do all the numbers function correctly? if so, the CPU is likely still good. Does it stop scanning when you turn the squelch all the way down? if so, the squelch circuit is still good. When the squelch stops, do you hear any static? if so, the audio filtering and amplification circuit are still good. if it still doesn't work, a NFM discriminator chip is probably to blame. If any of the previous circuits fail the check, that circuit is to blame. Anything else I can help you with?

Can't give you any direct advice on fixing your unit, however a very inexpensive way to see if it can be fixed is to take it back to Radio Shack and have them look at it. Normally they charge about $35 just to look, however if you sign up (FOR FREE) their credit card (which you do not have to use) that entitles you to FREE ESTIMATES on ANY BRAND of electronics you bring in.... Hope this can help you and others.. Low budget or not, why spend $35 bucks to be told it cant be fixed!!

From: Chris Ethridge
Topic: 2199 Message: 2199

I figure the epoxy must be a way to keep people from hacking their scanners, but what about those of us who would like to fix our legal scanners ourselves. Is this possible or do we have to send them back to the factory for an extended period of time and possibly a considerable expense? Hasn't the scanner paranoid crowd done enough by regulating our hobby into the ground? Not only is our coverage regulated but apparently so is our ability to repair our own gear.

First to straighten this out, Riley Hollingsworth has absolutely not a thing to do with CB's. Riley is an enforcer to the HAMS at this time. He would not even look twice at someone with a cb and a texas star mounted on the dash of the car. He is political in nature, and just doesn't care. I have met him, I know.

The goal of any group that trys to ban something is to make the offending crowd "equipment stupid." They think that knowledge is a terrible thing to have. Of course, this backfires sometimes. For example, after numerous blows to the 2nd Ammendment to the United States Constitution, the vast majority of the American public has become "gun stupid." Unfortunately, many times this results in folks acting stupid when they find a gun. I am glad that I learned this early: nothing you hear on the scanner is worth using to hurt someone.

I was introduced to scanners when I was four years old. My first one was a Pro-2020 when I was five. I have learned that there is a lot of damaging information to hear. I have heard things that made me lose faith in the people that I trusted. The police, firefighters, paramedics, my neighbors in the community. I learned at an early age that they are just people like you and me, and they make mistakes all the time. I listened as a man was shot three times in the back at close range by the local Sheriff's Department, for what? He was scared of being arrested for unpaid citations, so he bolted. I know this because I heard everything from the traffic stop to the call for paramedics. I've heard numerous instances of professionals using the same race and class slurs I've heard since 4th grade. I've heard friends and neighbors talk about me and my loved ones. They get angry, they get scared, they use language they shouldn't, they talk about folks behind their backs, and they're not perfect. They're real people. But I've also heard these people doing unspeakable acts of bravery and kindness, risking their life for others. I've come to know these folks, I've even participated in manhunts with them. These people are my family. We are joined by my scanner. Maybe now you could understand how much it angers me to see so many folks trying to take away my family.

Probably the first amplification stage. I burned mine out in a brand new pro-90 by accidentally keying up on 300 watts without disconnecting my scanner from a nearby antenna. The first amplification stage was covered in epoxy. "THE MAN" won that battle, because I wasn't able to remove the epoxy (that's tough stuff).

From: COPNEWS@aol.com
Topic: 2169 Message: 2209

I recall years ago I built a CB repeater it was a great experiment but a flop...it was rather involved and not at all legal ... but for the purpose of discussion I will relate it to you.

It used two sites about a mile apart. One site was at my home where I erected a 50 foot tower and hooked up to a crystal controlled CB set. Back in those days we used a "trick" to get what we called private channels. You could in many radios take the transmit and receive crystals, reverse them and get a quiet out of band "private" channel. Any way I generally had the thing operating below the CB band at I think about 26.96 or there about. The same trick was done with the mobile to get it on a screwy frequency. the receiver was then hooked up to a VOX switch When squelch would break on the receiver it caused the VOX switch to close. This was connected to a leased phone line that had a DC path on it. The other end of the line was at an apartment building about a mile away. In that building I mounted a CB antenna along with a transmitter and a small power amp (only 25 watts) The phone line and the DC path were connected to the mic input and the PTT switch. So whenever the receiver would hear a signal it would be transmitted on the unit at the apartment building.... It actually worked for a couple of years. The only real trouble came when the signal noise on the air caused the squelch to stay open and
the sweep tubes in the AMP fried from being keyed on air to long. It was rather cool to be able to talk across the city of Chicago using only one watt CB talkies.... But that was a long time ago and I would never suggest that anyone try it now..... Cell phones are much easier to use and family radio is much cheaper...

HI

the Kansas City, Kansas system is Type II motorola (no typeI at all)

the Kansas City, Missouri system is a EDACS ericcson/ge (EGE) system

i dont know what a pro-90 is (radioshack is it ?) but if it is a radios
shack unit
it should do a motorola system with out a problem.

if your trying to do EDACS then it would have to be the newest radioshack
unit.
pro-94 or 92 ..i have not had much experiance
with the radio shack units so i cant comment too much on them...(i guess a
field trip to the local shack is in order)

i hope this helps

Topic: 2214 Message: 2214

Yes,
I had one. I got it when there was a sale. It was normally like 225 or something and I got it for 129.
I liked it, but there were no mods I could do for it other that tap the discriminator for using my pc to decode pocsag and flex pagers. and see the touch tone numbers dialed on neighbors cordless phones. (you could even find out the next door neighbors cc # with that) But that is against the law, it is good to use a program such as wintone, when listening to the morning radio shows, when they dial someone up to play a prank, you can decode the persons number off the air.

Endless possibilities with a scanner and a pc working together, I guess that's why they say, one mind represents skill, two minds manipulate skill into evil ? go figure.

Have a happy holiday All,
Waltster

for decoding dtmf or touch tones, you can get a line matched cord and plug it into the speaker jack of the scanner , the other end to your pc. A cheap way to make this is to use a 1:1 transformer and a capacitor and resistor network to match the impedence of the scanner to the pc mic input.

2220. [SST] ICOM IC-R2

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-18 05:38:23 UTC
From: Mark R.
Topic: 2220 Message: 2220

Hello everyone and Happy Holidays, no matter what you celebrate.
A couple of hours ago I ordered myself a ICOM IC-R2 Scanner, and I was impressed by its coverage.
I was originally looking for a Pro-26, because there is a mod for those.
This ICOM scanner is not modifiable, as far as I know, and I figured, who really needs to hear cellphones?
Anyone else have this scanner? Any tips?
Thanks for responding,
Mark R.

I have the IC-R2. It is a great scanner for me since I travel a lot.
Don't misplace the instructions since there are several layers of
operations each button does or can be assigned to do. The lifetime
quoted for the batterys is really conservative unless you use it to
receive MW or FM broadcast.
ICOM was supposed to have a computer programming package for this radio
but I have not been able to find it.

To start, I think that kind of experimentalist idea is exactly what SST is all about. The sound may be on a different channel, or the receiver is broken. Do you get sound on any channel?

Date: 1999-12-19 07:21:52 UTC
From: Corey Smith
Topic: 2225 Message: 2225

Does anyone have any info on GMRS? How do you get a license? Is it hard to get one or expensive? Can you set up your own repeaters? What frequency range is it on? Can anyone use it? I am a Ham operator, but I don't like all of the restrictions of always having to give your call sign, not useing codes, etc. I would like to set up my own repeater on GMRS, but I don't know anything about it. If anyone knows about this, please let me know!

Thank You,
Corey Smith

Corey, Even in "GMRS" you must give your call sign. A license will
cost you $80.00 and it is good for five years. I am also a licensed
ham, however I really don't care for it much but for different reasons.
I much more enjoy my "GMRS". Understand there are rules and they
must be followed. We don't want to have another 11meter band (CB).
Although that too has it's place. For "all" the information and more,
go to the "PRSG" web site. They are to "GMRS" what the "ARRL is
to amateur radio. Happy Holidays!

The only channels with sound are the unscrambled channels. Everything that comes through the descrambler has no sound. Of course I am speaking hypothetically as it is against the law to own a descrambler like this.

Jon,
Sorry, no help here. I only know you can get quite a lot of FM stations throughout the dish and there is a way to change freqs on most C-band receivers. You should have an audio mode switch on the receiver or remote.... Interresting question though. Good luck. (And I'll be watching closely for any replys!

Jon,
You probably have an older, modified/pirated VC 2 descrambler board in a C-Band satellite receiver which uses a large 10-foot dish(however, you weren't specific). These boards did (previously to 1992) open up all scrambled channels with both picture and sound until the VC 2+ data stream was introduced to combat piracy of satellite signals. Most of the pirates who worked on these things lost interest as it became more challenging, interesting and profitable to try and beat the new digital technology introduced by General Motors' Hughes Corporation, the MPEG 2 DIRECTV system.
To get possible answers to your questions, you need to subsribe to The Scrambling News newsletter and ask your questions there, although you may find that they too have diverted their efforts to beating the new technology and avoid being caught as they practice "digital corruption and anarchy"! Type in a few keywords on any or all search engines on the internet , having to do with "satellite TV hacks or DTV hacks or TV piracy or free TV, etc." and then make sure you don't get caught abusing the information!
Jack

In response to some of your questions, I can answer what I know about. I am sure other's have more info. I do not have a GMRS license but I did look into it at one time. To get the license normally an application is included with the radio that you buy, fill it out and send the money to the FCC. I believe last time I looked, it was about $10 or so. From what I have heard scanning those frequencies, no codes are used and I don't hear call signs. At one time I contacted 2 way radio business's as regarding repeater usage. There are models that can be used for that, but the fee associated with it was astronomical. With you being a HAM you could probably make something.
Hope this helps somewhat, as to the freq, offhand it is in the 460mhz range.
Greg

...because, my friend, you are probably not the sneaky radio experimentalist type. Besides, it not like General Motors isn't a faceless corrupt organization whose fast track economic scheme eliminated hundreds of thousands of American jobs in favor of the almighty bottom line. For every person that has pirated digital satellite signals, there are 5,000 folks giving welfare to General Motors. Pardon me for seeming biased, but I think that moving the Flint Michigan plant to Mexico will more than offset the small loss of a few well motivated "tweekers."

Jon,
I assume you still get a good, solid, uninterrupted picture on all your VC2 PLUS channels, but with no audio. Some of the people here in Canada still want these boards (the black colored ones) so that they can watch all the porno channels for free and make their own sounds on those channels! I wouldn't promote this, but it happens. Still others will turn on their "closed captioning feature" on their latest up-to-date TV and you'll notice you can increase your speed-reading skills and ability while watching the latest run movies because almost everything you can watch on one of those pirated boards is encoded with "closed captioning" so you can read it as you watch it! You might get sick of doing that unless you are already deaf. These are just a few tricks to try and experiment with while learning about your satellite system, and you should not be encouraged to cheat your service providers out of revenues. There are also tricks that you can do with your scanner while it's connected to a dish through an in-line power supply that sends 18 VDC to the LNB in the nose of your dish and then sends the signals down to your scanner antenna terminal through a DC blocking tap-off splitter to prevent damage to your scanner. Seems to me I got that info at the Dayton, Ohio Hamvention a few years ago, but I can't seem to find those instructions under all of my electronic equipment! Perhaps others on this list can refresh our minds about these kinds of stupid scanner tricks!
Jack

2247. [SST] Re: GMRS

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-22 07:30:30 UTC
From: Corey Smith
Topic: 2227 Message: 2247

Then, what is the difference between HAM and GMRS besides the different
frequencies?
Thanks,
Corey

2248. [SST] Re: Sat Receiver

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-22 11:40:27 UTC
From: Sxyfirhose@aol.com
Topic: 2222 Message: 2248

This is in reply to one SST member(??) who equates to the other SST member's usage of wanting to descramble satelite TV signals. You say you have to pay and he is ripping them off. I would not agree with that. I also pay for cable - aprox just under $80/ month. Prior to that, I had bought a satelite tv receiver/dish, forked out over $400 bucks for the damn thing and than had to pay extra for programming. This did not include any HBO/SHOWTIME movies. After my year or so, my SMART CARD inside went south. I did not see renewing for what I was getting. I feel that if there was away I could of gotton my money's worth by getting more programs somehow without paying anymore, I would of. Now I have a very expensive sat. reciever and dish which is being used as a paper weight.....So, I too, will ask, does anyone know how to make a dish/receiveer / smart card work ??
Thanks and a MERRY CHRISTMAS TO ALL.....

2249. [SST] satellite receiver

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-22 18:41:21 UTC
From: W Hatfield
Topic: 2249 Message: 2249

I have a STS - MBS LSR satellite receiver; it only covers a RF input Frequency of 950 - 1410 MHz. I'd be curious to know if you could hook some sort of antenna to it and find something to listen to. The subcarrier frequency for the audio is 5.5 - 8.0MHz.

Hello Judy,

Thank for sending that email on Bill Cheeks. Did u see the article in Monitoring Times?

I became a member at onelist, perhaps then i can join kc-scanner list. Thank you.

I just bought a BC245XLT, now i can track KCMO and KCK and what'evs. It a wonder machine only if i can figure out how to use it(like fleet maps and all). Well, anyway thank again for "tunning" me into kc-scanner.

Merry Xmas
john

Sxyfirhose,
Check out the auctions at ebay.com
http://www.ebay.com
Some of the participants sell that information on ebay for cheap! Get it
before they ban the sale of this info.....
When you log onto the sight and are asked what you are looking for, type in
"DSS" or " DirecTV " or "satellite systems" and you might find what you are
looking for.
I noticed they don't have many good scanners to auction off. I
suppose that's because all scanners are keepers!
Jack

look for a "test card" on the internet, etc. it will give you all satellite channels (HBO, all pay-per-view, etc). They are around $200 - $500. They are illegal i'm sure.

When the cell phone is initially programed an unlock code
is put into the phone. This number must be entered to unlock
the phone. It can be any number, a very common code is the last
three numbers of the telephone number...eg phnoe number 123-4567
would have an unlock code of 567. Check your original paperwork
this unlock code is usually shown on the contract.

You said it yourself,"why." But you must like to pay into the system
and complain about others. It is good that people pay into the systems
and keep them going, so hard working people with not a lot of money can
get something good with out having to pay a fortune. Also they are
talking about programming and not the reciever, they already own that.

---snip---

SPECIAL CHRISTMAS NEWS BULLETIN

SECRET REVEALED:
SANTA CLAUS IS A RADIO ENTHUSIAST!

After years of investigation, the secret can now be
revealed. Santa Claus is a shortwave, scanner and
radio communications expert!

It really wasn't difficult to figure out. After all
look at all of the clues:

a) "He knows when you are sleeping, he knows when
you're awake. He knows if you've been bad or good"

SANTA MUST OWN A SCANNER!

b) Every Christmas Eve, Santa travels the air routes
of the world from the North Pole, in his sleigh,
reaching the homes of all the children of the world.

THAT OBVIOUSLY REQUIRES SOME VERY SPECIAL CLEARANCE
FROM AIR TRAFFIC CONTROL STATIONS WORLDWIDE. THAT
SLEIGH
MUST BE FILLED WITH HIGH-TECH TWO WAY RADIOS AND
ANTENNAS!

c) Santa safely completes his trip each year, avoiding
war zones, no-fly zones, conflicts and trouble spots,
as well as the numerous weather disturbances around
the
Earth. How does he do it?

SANTA MUST OWN A SHORTWAVE RADIO. HE MUST MONITOR THE
NEWS OF THE WORLD, TO HELP HIM PLAN OUT HIS SAFEST AND
MOST EFFICIENT ROUTE!

I guess we know now what Santa spends the other 364
days of the year doing at his North Pole QTH. DX'ING,
DX'ING, DX'ING!

May the sounds and the spirit of the holiday season
travel the airwaves of the globe and into your home

for
this Christmas 1999 and throughout this very special
New Year 2000. Health, happiness and prosperity to
all.

Best wishes to you, your family and friends.

Merry Christmas & Happy New Year
Joyeux NoÎl et Bonne AnnÈe

Sheldon Harvey
President- Canadian International DX Club
Owner- Radio H.F.

Regarding the ICOM R2, go here for allot of info about the scanner and the software for your pc. http://www.javiation.co.uk/ or you can go here and download it for free for the time being. http://vlaski.virtualave.net/ . I still need suggestions though if this is a good scanner. Anyone that has it or has used it please let me know if you were pleased with it. You can order the one from the UK with no gaps, for about 200.

Date: 1999-12-25 21:55:00 UTC
From: Monica
Topic: 2227 Message: 2268

You asked :

>Then, what is the difference between HAM and GMRS besides the different
>frequencies?
>Thanks,
>Corey

GMRS allows you to talk on a handfull of channels, and nowhere else,
actually less channels than a CB radio has. A GMRS license is a glorified CB
license, when CB required one. They are virtually the same in practical use.
GMRS is quieter and more private than CB, and much cleaner. Other than
that - ditto.
Hams though, access thousands of channels, including all GMRS.
GMRS rarely has access to repeaters, and has less range because of this.
(handheld to handheld, usually).
Ham almost always has a repeater somewhere within range of your mobile
radio. Hams who know code can use shortwave radios that communicate
worldwide. The lowest Ham license allows transmitting 1000 watts of power,
or even more if neccessary. GMRS I think allows 25 watts max. Ham licenses
have a 10 year lifespan. No test required to be updated. Your first test is
your last, unless you wish to upgrade.

Also, be aware that entering the wrong number several times can make one
of the IC's fry itself, a sort of suicide to prevent fraudulent cloning.

From: Corey Smith
Topic: 2281 Message: 2281

Just a general question....

I am incharge of a non-profit organization that is affiliated strongly with a police department.

Can I or How do I go about getting our own licenses for a pair of frequencies (simplex and repeater)?

How much would it cost?
Which band would I be better off using, should I get UHF or VHF?

I know how to go about getting radios and a repeater, but don't know how to get our own frequency licensed to us. I am in the Kansas City area. If anyone has any info for me, I really would appreciate it. This is a non-profit organization by the way.

Thanks!

I'm not an expert but a friend of mine said that Nextel goes over the telephone lines. That would explain why it is so clear so far away.

you can with a program called "Trunker", but it's difficult and requires 2
scanners.

Below is the result of your feedback form. It was submitted by () on
Monday, December 27, 1999 at 06:14:33

What: 800-900MHZ Trunked System
frequency: same as above
body:
I recently bought a PRO-94 Dual Trunking scanner from the local Radio
Shack. Although it's a BEAR to get all the programing done, after severl
attempts, I was sucessful!
A friend told me to try a different antenna since the "rubber-duckie"
one that comes with the scanner doesn't work very well indoors on the
trunked freqs.(I lve in a mobilehome and it's like being inside a metal
box, so incoming signals have a hard time getting in here. Soooo I went
to my local Radshack and purchased these two items and they really
work.....give it a try since this will work on any scanner that
recieves these freqs mentioned above.

part#17-317 -- A celluar antenna for "bag-type" phones
this has a 3db gain! and has a flexjoint so you can move it 180
degrees. Iv'e had GREAT sucess with this antenna both indoors and outside.

part#278-144-- a TNC to BNC adaptor/// you need this to connect to
your scanner; unless you have a different connector on your scanner-----
once again, Radshack has just about any adaptor that you may need.

part17-318--- a magnetic mount antenna for celluar with TNC
connector......works good for mobile scanning.. BE SURE TO CHECK LOCAL
LAWS REGARDING MOBILE USE OF SCANNERS!!!!
I don't want anyone to get busted by their local "Barney Fife"

Also.I have a multiband "export" 10 meter transciever and for the past
several days I have been picking up a broadcast staion called "Radio for
Peace Int." on 25.930USB.What is this;a bootleg station or what. The
programing is pretty crappy but here in S.Carolina I get an S-10 signal
on them. Anybody who can figure this one out;let me know since I'm into
SWL and 2-way DXing.

my dad did some work for nextel, and he knows alot about this type of system. it uses the telephone lines and cellular frequencies. when u press the button to talk, it sends it via cell freq.'s to the nearest cell tower, where it is then put on a regular phone line and connected to the cell tower nearest the other user and sent to their phone with the cell frequency. if the two users are near enough to each other, it just goes strait from phone to the tower to the other phone without using the standard telephone line. at least that's what i'm lead to believe.

nextel operates a digital system which starts, i think, at 854 mhz. check out links for more info http://www.nextel.com/information/technology/facts_digitalsecurity.shtml http://www.nextel.com/information/technology/supporttech.shtml (http://www.nextel.com/information/technology/supporttech.shtml)

2299. [SST] Looking for a handheld scanner with these features, any suggestions?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-28 06:16:33 UTC
From: Mark R.
Topic: 2299 Message: 2299

What I Want In a Handheld Scanner

Price: Around $200

Frequency Range: Continuos 500Khz to 1300Mhz(1.3Ghz) or more.

Must Haves: Backlight display, with numerically numbered memory banks, that make sense. 400 Channels, or more. BNC antenna connector, SMA considered, if only scanner available with features. PC controllable, built-in helpful. When scanning memory banks, steps will not need to matter, and locks in on that frequency exactly, if activity happens. VFO mode, or where you can switch between manually going to a frequency, and going to the memory banks. Good sound, nice treble and base.

Nice to Have: Numeric keypad, must be PC controllable if there is no numeric keypad. Alpha-numeric display. S-meter, whether in display or analog meter built-in. Data feature for skipping data streams. Trunk scanning abilities. Delay feature.

Your help is apreciated. I have an Icom IC-R2, but find it not to be quite my style yet, I just got it, so who knows.

My book from 1996 shows them to be:

Punta...
154.950
155.130
155.370
155.565

Port...
(I found no police frequencies for this town. They probably are dispatched by the county or maybee even state. E-mail me back with the county that it is located in, and I can give you the county frequencies. I have some fire frequences listed for them, but chances are that if the town doesn't have their own police dispatch, they don't have their own fire dispatch or even fire department. Do you know if there are actually police officers for this town, or are they patrolled by the county? I work in Law Enforcement, so if you have any further questions, let me know!)

2301. [SST] Re: Fwd: unblock the 800 - 956 mhz

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-12-28 14:50:28 UTC
From: O'Phelan, Eric (MLBFS - CHI)
Topic: 2260 Message: 2301

To unlock a cell phone do the following. 1) depress the "function" key, 2) depress the (0) Zero number (13) times, 3) Then depress the recall button., 4) Then scroll through the phones memory using the up and down arrows to find the unlock code., 5) It should be the sixth or seventh entry in the memory, but some phones are different. This may not work on all phones, but most do.

Does anyone have any opinions on the Bearcat BCT-7 Highway Patrol Unit?

Rick

not sure how a message entitled unblock 800-956 mhz turned into a unlock the
cellphone matter, but..lol....also be aware that the phone could have a 4 digit unlock code and that some sales reps are lazy and the code could very

well be 000 or 0000, the factory code! happy holidays, jim

When the cell phone is initially programed an unlock code
is put into the phone. This number must be entered to unlock
the phone. It can be any number, a very common code is the last
three numbers of the telephone number...eg phnoe number 123-4567
would have an unlock code of 567. Check your original paperwork
this unlock code is usually shown on the contract. >>

Mark, for $200 your not going to find much in a hand held like you want, unless the seller is desperate for money. I recently purchased an Alinco X10 scanner, that receives from 100 Khz to 2GHZ. The only spectrum missing is 824-850 Mhz, and 935-to 950 Mhz. Why the 935 to 950 Mhz spectrum was blocked on this model in the USA remains a mystery, since this is a commercial 2way radio area. Disneyland uses this spectrum these days, so do alot of Las Vegas Nevada hotels. Monitoring Cell phones is boring as H, for the simple reason those doing illegal activities dont do it on cell phones since the police and feds themselves monitor the spectrum from various sources. In a few years ALL cell phone activity will be digitalized and encrypted, so why bother listening. Best scanner made was the Regency MX7000, and mine is not for sale. Good Luck in your search though. 73

Yesterday I switched the Murata IF filter SFD-450A labeded FT-2 with a
0,01 microFarad ceramic capacitor, now the bandwith is about 30 Khz, do you
know something like this sandyj, switching the IF Filter with a capacitor?
and It is secure to the "scanner Health"?

Thanks

From: Tlowery473@aol.com
Topic: 1769 Message: 2311

Nextel is actually Time division multiple access "TDMA" it operates on the 800 MHz SMR frequency band and the tower's are linked VIA T1 lines this why you have the longer distance. The phones are in the Nextel system individually thats why they have a different ID for each phone they also have a fleet ID that is internal to Nextel's system i.e. Nextel's computers know where the belong and who they can talk to. With digital encryption, If you try to listen with a scanner all your going to hear is noise.
hope this helps everyone if you need to know more let my know.
Terry

I think the most important reason is that there are 3 different types of the AR - 8200

A us version a japan version and a european version
The european version is the only one with no gap

Look at the homepage of AOR

Sandy,
Basicly the feds raided the Ramsey electronics store and confiscated radio kits. the list is on the site but I can say at least two of the kits were for wireless microphones and the fm transmitter kits.
please check out this site for more info...

http://208.46.148.11/

there is a big discussion on that site as well as alot of info.

Both Punta Gorda and Port Charlotte are in Charlotte County, FL. The two towns are on opposite sides of Charlotte Harbor (if I'm not mistaken).

the filter is there for a reason and it also depends on what circuit it is in. my guess is if you get any reaction at all it will be an overlap like white noise and maybe a second or third hamonic interference. this is an educated guess only but if you havent had a rpoblem since you have done it then , then i wouldnt be overly concerened

Where did I mention that I wanted to listen to cell phones in this post?
I already can get the images in the lower 500Mhz range, and I'd fall asleep
listening to it.
I have an Icom IC-R2, and its going to take me a little getting use to.
One thing is the banks are not labeled in normal numbers.
I'm getting a little more happy with it.
Last night I did pick up a cordless and some guy had fell asleep in his bed,
and his wife was laying by him. I wonder if he knows that anyone could hear
his transmitted snores. Listening to it all would put me to sleep too.
Anyone have railroad freqs for NW Missouri, for now, I don't know what
railroads come through here.
I did pickup some activity on a suggested frequency, and another frequency
constantly picks up the data burst beeps for the EOT device.
Well, everyone have a good scanning night.

Stupid Scanner Tricks

---snip---

Dec. 29, 1999

Courtesy of William Westenhaver of Montreal, here is a great website for those of you who might be looking to follow the arrival of the New Year in different countries via web radio monitoring.

http://www.rnw.nl/realradio/features/html/newyearseve.html

This article, appearing on the Radio Nederlands webpage, is entitled New Year's Eve Monitoring on the Web". It is compiled and edited by Mr. Lou Josephs. It provides URLs for various radios stations around the world, hour by hour, as the New Year arrives in each time zone.

This is an excellent resource, and will compliment the similar listing of off-air shortwave broadcast services which was distributed to you earlier.

Thanks to William Westenhaver for sending along the details on this URL, and thanks to Mr. Lou Josephs and Radio Nederlands for making this available.

A reminder that you can find the list "New Year's Eve and Y2K Shortwave Radio Monitoring" on the CIDX webpage:

http://www.anarc.org/cidx/SF6Y2K.html

If you have any questions about any of this, please feel free to contact me, by telephone, fax or e-mail.

Sheldon Harvey
President, CIDX

From: s. ballard
Topic: 2330 Message: 2330

Does anyone know how or if you can get the private or restricted frequencies for the police? Also does anyone know how I can get the list of frequencies for Minot, North Dakota? I have some listed but cannot figure out what they are for exactly. Any information you give me will be appreciated. Thank you, shannon

2331. [SST] WWW Form Submission

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Thursday, December 30, 1999 at 21:06:41

What: Shortwave
frequency: 14.23, 2.5, 5, 10, 15, 20
body: To listen to pretty pictures, tune to 14.230 MHz and you can
usually hear someone sending their picture or something it sounds like a
bunch of blips with tones in the middle. If you have the right program
for your computer and you hook your radio up to your sound card you can
also see the pictures! WOW! There is also a radio station called WWV
where you can hear the time! It's at 2.5, 5, 10, 15, annd 20 MHz. Is that
cool or what? The only one i can hear is at 5, sometimes 15 (i live in
colorado) Depending on where you are it differs. And if you or anyone
else hears a sound with steady clicks about every half second and a
steady tone between, PLEASE TELL ME! That is usually a NOAA weather
sattelite, and I have only heard one so far, but I have the software to
decode it and it's kinda cool.
Well, enough of my radio blabbering...

Hi Rich,
The NOAA weather sats go by a couple times
a day ,if you have WXsat or similar program put
it on standby and turn the squelch open on the radio
on 137.500 or 137.620 (137.500 is more active).

The amsat.org website has all sorts of info about sats,
also I can email WXsat if you need it.

Kevin

I have had incredible results finding the police frequencies you request.
You should try scanning between 163 and 168 megahertz.
You ask for "private and restricted" police frequencies. I remind you we should be living in a free society where no police frequency is private. I do not believe any police freq is protected by law. When police are allowed to act secretly we will also lose the right to have scanners.
Police use coded transmissions on many of these channels, and skip around this 163-168mhz range depending on their identity.
There are other ranges, but here I was more lucky. I found much undercover operations here in San Francisco. About 40 percent of the traffic was coded. The 60 percent in the clear and readable was either CUSTOMS or SECRET SERVICE - or mostly California statewide DEA, Drug Enforcement Agency. Also some unidentified surveillance from another city using the interstate, possibly ATF. These agencies all operate outside of California whenever they need to hop a bus and follow a suspect, or travel in 4-10 car convoys of unmarked vehicles, including a helicopter. Also check 154.680 in California and 154.665 for body transmitters.

2343. [SST] Question...Mod for IC-q7a

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-02 17:53:17 UTC
From: Teh Hong Soot
Topic: 2343 Message: 2343

Hello happy new year to everyone.

Did you all still remember about the modification for Icom IC-Q7A.

Once you perform this mod to your radio, you should have the following new features:

FULL TRANSMIT FROM 140 - 174 MHz and 400 - 470 MHz

TV CHANNELS 1 - 12 WHEN BAND SELECT BUTTON IS PRESSED

2 question I want to ask.

1st Question:
My set without any mod can transmit from 136-174 MHz and 400-470 Mhz.
This shows that my set without any mod can transmit at wider range.
Why I need mod for this.

2nd question:
How to make it works for TV channel? 1-12 is what frequency?

Thankyou,

From: brown82@MARSHALL.EDU
Topic: 15 Message: 2349

They make little clocks with an internal antenna that listens to the ticks produced by WWV in Ft. Collins, CO and uses that to calibrate itself automatically. I think RadioShaft used to carry them several years ago, but I am unsure as to their current availability. As you notice, there are regular hums, high pitched squeals, and beep intervals. These are precisely accurate and are used to calibrate machines that use time as a variable for data collection (such as oscilliscopes).

2352. [SST] funny calls

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-04 14:47:07 UTC
From: mcgovern design
Topic: 2352 Message: 2352

Just heard this one last night:

Dispatch: "Complaintant just called in a priority-one suspicious person;
someone is at their door claiming to be the police."

Officer: "That would be me."

2353. [SST] WWV Clock

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-04 18:12:56 UTC
From: RadioMitch@webtv.net
Topic: 2353 Message: 2353

Radio Shack manufactures a clock capable of receiving WWV (National Bureau of Standards Broadcasts) signals that costs $24.99 stock number 63-968 which listens to the broadcasts on one of WWV's frequencies and has a time correction program in it and displays it on an LCD display. It is a cheap effective way to get an accurate time display.

Topic: 2359 Message: 2359

I have a scanner and I listen in on the State police. I know they are starting to do drive checks by computer.....can one hook up their computer to catch some of the replies???

2360. [SST] Re: Bearcat 210

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-05 05:40:31 UTC
From: COPNEWS@aol.com
Topic: 2360 Message: 2360

The old 210 does not cover 800 MHz at all it can only get 800 with an external converter. Its a lousy radio any way. Old design not triple conversion. Bad front end.

I recently bought the Sony scanner you are talking about. Is it the 1300 Mhz scanner? I liked it, it worked pretty good. I especially liked the computer program that came with it, it gives you a good way to program the scanner on the PC.

Jarred,

I have a Bearcat BC-210 scanner, made 13th week, 1978, according to the tag on the back. I've heard mods on how to make it tune down to the 136 - 137 Mc band and widen the bandwidth to about 30 kc to receive weather sats but so far as I know, that's about it. The scanner can receive 30 - 50 Mc, 146 - 174 Mc, and 416 - 512 Mc and you can program 10 channels. If you want it to receive the 800/900 Mc bands, you'd need an outboard downconvertor to receive them. It's a pretty good scanner for local stuff as long as it falls into the standard VHF-Lo/Hi and UHF-Lo/Hi bands. It doesn't have as many frills but it does keep me up on local happenings as I type on the computer. B-)

Well, SHOOT!

That is just out of my scanner's range! It can do 30-54, 138-174, and
380-512 MHz! Doh!

Thanks anyway,
aLEX

PS. I do have WXSat. Thanks anyway.

I used to have a small program that sets your computer clock to WWV time,
when you have your radio hooked to your soundcard.

2369. [SST] Re: No Subject

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-06 06:38:04 UTC
From: Monica
Topic: 76 Message: 2369

If you live in Chicago and you want to listen to California's frequencies, well, the only way i know how is to use your computer by going to LIVE POLICE BROADCASTS, like http://www.policescanner.com/ and http://www.policescanner.com/police.stm and http://www.westworld.com/~justus/scanning/live.htm and other links related to scanning like secret government freqs on this page : http://www.westworld.com/~justus/scanning/secret.htm
And more links on this site:
http://www.primenet.com/~confused/scan.html
And here's a frequency finding directory:
http://www.911scanner.8m.com/
To answer your qeustion, no, you cannot hear California from Chicago. Even if you had an antenna that was sensitive enough, it would pick up all the other police departments sharing that same channel between California and Chicago, since there aren't that many frequencies out there to have everyone on their own channel anymore. The only way two can share the channel is that the distance between stations ios great enough so that neither can hear the other. An average distance for a home antenna reception of an urban police staion is about 30 miles or so.
Hope that helps. Welcome to the hobby.

You dont need that. Go to www.nist.gov and get their time program. All it requires is Internet access or a modem. You can also get a WSPing trial version at www.ipswitch.com. It has a time synchronizer and a ton of other features like finger, whois, and dns lookup.

From: Jon Cunningham
Topic: 76 Message: 2371

There are websites where you can listen to scanner traffic from just about any big city, however to hear it on your scanner would be unusual unless the skip was in.

From: COPNEWS@aol.com
Topic: 2372 Message: 2372

Nope You cannot listen in on computer traffic. The computer system is on 800 MHz and is digital. If you could dial in the frequency all you will hear is noise. Each message is sent to only the terminal requesting the information and only that terminal will see it. Even if you had a 800 MHz terminal you would see nothing... Its the one thing we have not been able to crack so far...

2373. [SST] headsets-frs radios

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-06 17:57:48 UTC
From: John
Topic: 2373 Message: 2373

I was hoping someone could help me...I often use of those FRS radios tocommunicate (one way) to my wife's scanner. I have a couple of different headsets I want to be able to use on the radio shack FRS radio. The radio has a double jack on the side and one of the headset speaker mikes has a pair of plugs that fit perfectly...only problem is that it causes the radio to transmit continually, regardless of whether the push to talk button is pushed in or not...the headset is a uniden apx311 model. The second headset is an unknown model, and the plugsappear to bethe same size but are spaced differently so they will not fit the jacks on the radio...Any help would be most appreciated.

my dad did some work for nextel, and he knows alot about this type of system. it uses the telephone lines and cellular frequencies. when u press the button to talk, it sends it via cell freq.'s to the nearest cell tower, where it is then put on a regular phone line and connected to the cell tower nearest the other user and sent to their phone with the cell frequency. if the two users are near enough to each other, it just goes strait from phone to the tower to the other phone without using the standard telephone line. at least that's what i'm lead to believe.

I have Bean told the same think and that's why thay offer Cell phone to Cell for you as Cheap as 5c's a min hear being all the tower's are linked using ISND...

2384. [SST] Fwd: Agilent (HP) offers Unprecedented Savings!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-08 02:16:15 UTC
From: Rich Barron
Topic: 2384 Message: 2384

I'm forwarding this on to the list in case anyone is technically
interested in test equipment.

Rich Barron
SST

---snip---

If you've been waiting for the perfect time to get incredible savings on
top-quality used test and measurement instruments, this is it.

Beginning January 20, Agilent Technologies (formerly Hewlett Packard) will
conduct the first in a series of multi-million dollar auctions on Tucker
Electronics' PlanetTest.com. This is an unprecedented event-Agilent
Technologies' first auction ever held on the Web! Over 260 recent models
of
top-quality, used instruments will be up for bid. And the bidding will
start as low as 80% off the new list price!

PLUS-if you're a winning bidder, you'll be able to purchase our Tucker
Electronics 14-Step Quality Reconditioned Service separately.* Now
there's a
deal that nobody can beat-because no one else is doing anything like this
on-line!

Imagine! You could save thousands of dollars on some of the finest
instruments available-and enjoy all of the extra advantages that have made
Tucker Electronics an industry leader for over 30 years. You'll receive
our...

* Knowledgeable technical and customer service representatives
* Lease and revolving credit financing options
* Unparalleled warranty service*
* Return privileges that apply to any purchase you make
* Plus no escrow service requirements and no third party hassles

Added values like these can only be provided by a respected
brick-and-mortar
company-like Tucker Electronics.

Want a closer look at what you'll find at the Agilent Technologies
auction?
Here's a preview:

* 4395A/001 500MHz Network / Spectrum Analyzer with 1MHz resolution
* 5361B 40GHz Pulse / CW Microwave Counter
* 54600B 100MHz, 2 channel, Digital Oscilloscope, 2mV sensitivity

* 54845A 1.5GHz, 8GS/s, 4 channel, Infiniium Oscilloscope
* 6671A 2000W, 80V at 220A, HPIB, Metered, 0.002% reg. Power Supply
* 83620A/004 20GHz Synthesized Sweeper with 1KHz resolution
* 8922S 1GHz GSM Mobile Station Test Set
* E2925A/001/002/100 32 bit, 33MHz, PCI Exerciser and Analyzer

And much more!!!!

Download the complete list of equipment today at
http://www.PlanetTest.com/Agilent so you can incorporate the auction into
your new annual budget, and compare prices in the marketplace to determine
your maximum bids.

So mark your calendar NOW, and be at PlanetTest.com on January 20th when
the
curtain goes up on the biggest on-line event in the T&M industry! Don't
miss
this opportunity to get fantastic prices and great Tucker Electronics
service on the instruments you need.

Take advantage of this terrific opportunity and register to bid today at
http://www.PlanetTest.com/preferred. And when you register, look forward
to
early notices of even more upcoming auctions from leading manufacturers!

Jim Tucker
President
Tucker Electronics

* This service may not be available on selected items.

2385. [SST] WWV and scanner preference over biased news

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-09 01:07:35 UTC
From: brown82@MARSHALL.EDU
Topic: 15 Message: 2385

When their site was down, the shortwave radio still worked. Here, we lost
phone service for 3 days because of Y2K. Still, the darned news keeps
putting out the blanket statement: Nothing happened anywhere... boy,
they sure do a good job at that. That's one reason why I like the scanner.
It's a great thing to think the phone guys were scrambling around come
midnight when the computers started shutting down. Hah!

On Thu, 6 Jan 2000, Q Dude wrote:

Below is the result of your feedback form. It was submitted by () on
Thursday, January 6, 19100 at 22:22:07

What: Sending signals to freqs
frequency: Any freq you want
body: I heard about sending a signal to a police frequency by putting a
CB microphone in front of a scanner in THE WACKY SCANNER PAGE
http://www.webzone.net/dshuffy/wsindex2.htm.
I was trying a similar experiment, but instead of trying to send a signal
over a police frequency, I was trying other frequencies such Bussiness
radios and cordless phones. It was interesting that when I tuned to
channel 9 on my CB radio and put the scanner on SCAN while holding the CB
mic in front of it(I blocked the police frequencies while trying this
experiment), my scanner stopped on a cordless frequency(43.7200). I
tapped the CB mic when it stopped on that frequency, and it did transmit.
I don't know if it would work while someone would be using the phone on
that frequency. I tried transimiting signals to other frequencies. I
tuned to channel 22 on the CB and put once again my scanner on SCAN while
holding the CB mic in front of it. The scanner stopped on a freq that is
used for my local school(151.7150, motorola bussiness radios) I had to be
holding the scanner and the CB mic in a certain angle. Move the scanner
around along with the CB mic in front of it until yo!
u hear the signal in you scanner. I talked on the CB mic and it did
transmit my voice to that freq. it only worked when I had the CB radio
tuned to channel 22(That means that you can probably send something to
your local Wal-Mart!). Try this experiment by putting your scanner on
SCAN and tunning your CB radio to different channels to see what you
would get, and move you scanner in different angles. I suggest you to
block the police frequencies so you wouldn't accidentally send a signal
to them. NOTE: DON'T TRY THIS TOO MUCH THOUGH BECAUSE YOU MIGHT FIND
YOURSELF IN DEEP TROUBLE ONE DAY!! DO THIS AT YOUR OWN RISK!! BE CAREFULL!

2391. [SST] Re: WWV and scanner preference over biased news

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-09 02:12:58 UTC
From: Alex Swedenburg
Topic: 2391 Message: 2391

Yeah, ive known about the software for a long time now, i just seem to like using it trough the radio better for some reason. BTW, does anyone know where to find the software for the radio->soundcard time sync can be found? i had it once, but i can't find it now.

Consider that perhaps your CB radio does this:
I experienced the same thing one day passing by a comedy club in San Francisco. The entertainer was using a wireless mike. the freq was 169.105 to the mike.
My CB was in my car parked outside the club. (people inside paid $15 for the show, not including a one-drink minimum. I enjoyed the show for free in my car, using my scanner.)
When I replied to a friend over the CB on channel 8 I heard my voice blast over the speakers of the comedy club. Good thing it was improv night. The entertainer took it in stride and fit it into his act.
If I was the mishevious type I could have made trouble, but I shut my CB off.
What we are experiencing is probably this:
The CB interferes with wireless systems. Cordless phones, wireless microphones, as such. If your scanner is already sitting on the cordless phone freq then of course you will hear the interference, but it is not the scanner which is doing it. Your interference is still there caused by the CB wether you are listening with a scanner or not. You are only hearing it because the scanner is already tuned to that freq.
In order to hear cordless phones, wireless mikes, etc...you have to be physically close to them anyway, since they transmit with about 1/4 watt of power, so therefore your CB is within range close enough to interfere with them as well. If you hear a police frequency with your voice on it when you transmit on the CB, it is because your scanner is now the target of interference. Your Cb is now interfering with your scanner. No police radio is being interfered with unless it is very close to your CB at the time.
That's my take anyway. Interesting stuff.

I guess I didn't understand the original question, does this dude want to
see Mobile Data Terminals? If so, he needs a baseband audio output with a
hamcom data slicer, then he can see what's going on via a computer com
port by using a protocol decoder.

Take an Ohm meter and see which plug closes the switch when you press the ptt button, then, you can splice the good set onto the right plug harness.

On Thu, 6 Jan 2000, John wrote:

Those scanners are triple conversion, so an external down-converter would be virtually useless. As of now, there are no cell mods for these scanners.

I think so, but hey, they can't keep tabs on everbody. Public
nullification of prohibition brought it to an end, and I think scanners
serve a much better purpose than liquor ever has.

Lansing (Eaton County) is Post 11

42.74 Statewide Channel 1 - L. E. I. N. (car side only)

42.58 Statewide Channel 2 - L. E. I. N. (station side only) / car to car

42.24 Car to Out of County Post

42.68 Post to Post

42.48 Statewide Channel 4 - Tactical / Emergency

155.505 Statewide Robbery, Larceny, Narcotics, Homicide Detectives (Tactical Channel 2)

154.665 Statewide Homicide Detectives

154.92 Statewide Vice Squad

155.46 Statewide Auto Theft Detectives

154.905 Statewide Narcotics, Homicide Detectives (Tactical Channel 5)

154.68 Statewide Tactical Operations

45.38, 45.46 M. S. P. Statewide Helicopters (lower = air to ground, higher = ground to air)

154.935 Statewide Fire Marshall Division (Arson Investigators)

154.695 Statewide Mobile Extenders

445.6 Emergency Management Division Districts 1 and 8 (Lansing is in District 1)

Emergency Support Team (E.ST.) (M.S.P.'s version of a S. W. A. T. Team)

460.025, 465.025 Channel 1
460.075, 465.075 Channel 2
460.125, 465.125 Channel 3
460.175, 465.175 Channel 4
460.225, 465.225 Channel 5
465.05 Channel 6

Marine Patrol

39.1, 39.14, 39.58 Statewide Marine Patrol (39.14 also used by Sheriff Departments)
39.82 Statewide Mutual Aid

can anyone tell me of paging services like pagenet,which i have, that send out fire call ,etc, to your pager ,since these have to be paged out by listening to a scanner. this can be from any state!! & free

thanks b

2403. [SST] Re: sending CB into frequencies

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-11 06:01:04 UTC
From: brown82@MARSHALL.EDU
Topic: 2396 Message: 2403

Especially if you are using a linear amp or if there are any loose connections, interference will be great. The physical explanation is as follows: if there are imperfect connections, there will be sparks that jump between the gap at the bad connection. This will cause a less powerful transmission that encompases all frequencies of the radio spectrum. This is called broadband emission and it is the same source of horrible buzzing you pick up when driving under high voltage powerlines. Even FM is susceptable to this, but AM is horribly prone to picking this stuff up.

2405. [SST] FRS Radios

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-11 07:49:21 UTC
From: RadioMitch@webtv.net
Topic: 1983 Message: 2405

Here is a tidbit of information to those of you contemplating opening up the FRS radios to modify them to accept a BNC connector to extend your range, one word of advice I have to say about this, DON'T! Do not bother wasting your time, I spent the latter part of about 3 hours opening, gluing, soldering, experimenting to fit the plug, reopening, repositioning and finally having to reopen the radio because it would not work with a ground wire attached to the ground on the BNC plug. Use the radio for what it was intended, low cost, short range communication. A rep from Motorola advised me of this, but since my friend broke off the rubber "duck" so to speak anyway, I was forced to implement an unorthodox modification anyway. I also tried a 1/4 wave gutter clip ground plane on my car, it worked a LITTLE better, but not enough to make a significant difference. Hope this tidbit of info saves some poor soul some aggravating time trying to extend its range!

2406. [SST] Re: sending CB into frequencies

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-11 13:32:31 UTC
From: COPNEWS@aol.com
Topic: 2396 Message: 2406

YOU ARE PRETTY MUCH CORRECT....cb radio will get into PA systems that are wired as unbalanced and medium to high Z I most cases the long mic cables used by thses systems act as antennas the rf is restified and passed along to the audio stages. Generally speaking the CB is not getting into the wireless mc system as most professionl system are true FM and are not going to be affected by a five watt signal from outside. But bad speaker and mic wiring can cause a situation that will allow rectification of the AM into audio.

2407. [SST] Unblocked Scanner for a good price

Date: 2000-01-14 20:13:21 UTC
From: aq509@osfn.org
Topic: 2407 Message: 2407

Hello, I was wondering if anyone has any recomandations for me. I'm looking to buy a new UNBLOCKED scanner, that has a BNC connection, preferably rechargable battery packs like Bearcat scanners have. The price range for this should be $100-$250.

Thank you VERY much!
Alex K.

2408. [SST] Re: sending CB into frequencies

I did somthing similar once with a 350 lin. I was driving by a local hangout in Cotati Ca, and a guy was playing guitar to the folks eating outside, I key"ed up and heard myself on his amps and said all drinks on the house for the next two mins. I could have done more but as you said respectfully I held back.

But I crackedup bigtime! It took a while to stop laughing.

From: brown82@MARSHALL.EDU
Topic: 1983 Message: 2410

One thing to take into account is that the rubber ducky antenna is circularly polarized. This means it works pretty well no matter how the antenna is oriented. But this antenna is not the same impedence as your standard homegrown ground plane. So when you put a 50 ohm BNC hookup on your radio, your radio is transmitting into a load for which it wasn't designed. For those of you that don't understand this phenomenon, it is much like trying to get a really high note from a tuba. The radio waves sort of "echo" around along the conductor and cancel themselves out when they destructively collide. This cancelling effect is what renders an antenna worse which would otherwise be much better than a simple rubber duck. For this to work, you must build a small matching transformer built to terminate into 50 ohms. Then you would get wonderful results with a ground plane antenna magnet-mounted to your car.

Topic: 2402 Message: 2411

It was rather hard to understand this message, but a do believe that he is talking about 2 tome, sequential paging... i.e. a tone of (for example) 296.5 Hz for 94 Milliseconds, followed by a tone of 1321.2 Hz for 70 MS... (Example given is Fawn Twp. fire department #2, Fawn Twp., PA.

As you can tell, I have experience in this... I set up a computer so that FT#2 can self-dispatch... did that for Y2K, incase the power went out... we had a generator, but our dispatcher did not...

Anyway, there are used ALL over the US, mainly by Volunteer Fire departments, and by some small businesses.

2414. [SST] RE:CB

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-16 23:46:12 UTC
From: Andy Steggall
Topic: 2414 Message: 2414

If you want a good high power radio with lot's of channels I would buy a Ranger RCI-2950 or RCI-2970 the 2950 has 25 watt out put and the 2970 has a 100 watt out put and you get AM,FM,USB,LSB,CW modes You will pay about $130-$300 for a good used one but it is worth it. If you get an old modal you will get FEQ. from 26-32 MHZ. new modal you will get 26-30 MHZ you can use the 11 meter band or 26-28 you will hear conversation mostly USB and LSB you can not talk on 10 meter or 28-32 with out a ham license but you can listen to them and yes they do use voice in the 28 band on USB and in the 29 band on AM,and FM. I have one of these radios and would not use anything else.And take there advice and get a good antenna

hope this helps
Andy

The only way to buy a NEW unblocked scanner is to purchase it overseas and
(illegally) import it to the states (presuming you are in the US).
Otherwise you are stuck with the used market.

2417. [SST] egroup for Louisiana

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-21 02:16:04 UTC
From: W Hatfield
Topic: 2417 Message: 2417

If any one is from Louisiana and has some active scanner frequencies for the state, we would be pleased if you would drop by and post them, since we are trying to cover the whole state with everything from local police to the electric companies. Also, if you have some good links for Louisiana, post them as well.

Thanks for your help.

Below is the result of your feedback form. It was submitted by () on
Monday, January 17, 19100 at 19:28:46

What: Scrambled signals.
frequency: Anywhere
body: Right, scrambled signals are usually AM with the carriers removes.
Only USB and LSB go out. You can't hear them on AM, USB or LSB. (that's
what it is here, north england)
So, if you put a low power carrier there, your scanner will hear it
(badly). How do you get that low power signal? Here's how.
Get a kids RC toy (not a complex one, one that's got a simple "push
button and toy will beep or something) open it and change the crystal.
You don't have to get the freq. of the Xtal spot on, you can even use
harmonics as these transmitters are unfiltered. If you're spot on
frequency, transmit a few rooms away. If you're further out, then
transmitter closer. Simple! Any you'll be bored again within a week, cos
they all are rubbish.
Who: A bored ham.

It can be heard daily probably at many times, but I heard it on and off
from 5:00pm - 6:00pm.
Can only hear the sweet girl up in the helicopter though ;) Can;'t hear
the people in the studio - just another address, I guess - or find out
the radio station!

2429. [SST] List Info - Please Read (and shameless plug)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-23 23:01:24 UTC
From: Rich Barron
Topic: 2429 Message: 2429

Here is some helpful info about this list which may clear up some confusion.

First off, all e-mail addresses posted to the list will be mangled so that those evil spam bots won't get your e-mail address and start sending you junk mail. It causes us some problems because that also means you can't directly mail someone who has posted to the list. If you want people to see your e-mail address you will have to be a little clever and post it in such a format as:

E-mail: myname "at" myhost.com

instead of:

E-mail: myname@...

Which you can see is missing the 'e' in 'myname'.

Next, please be aware that you can take care of your own subscription options and more at the lists website:

http://www.egroups.com/group/stupidscannertricks/info.html

But in order to gain access to your area, you have to sign up with e-groups. They are the host of our group and have a lot of nifty features available to you once you sign up with them. You can take part in our polls, find old answers to questions in our archives, change your subscription, take part in a chat, and more.

Feeling swamped? You can change your subscription to "Digest" if you only want one e-mail message a day that contains a summary of the days messages. Or you can choose to read the messages only on the web. Those are the two best options for those of you feeling swamped with e-mail messages. I like the digest mode myself.

If that doesn't work for you and you just want off this crazy thing, then unsubscribe by sending a blank message to:
stupidscannertricks-unsubscribe 'at' egroups.com
and you will be taken off the list immediately. No muss, no fuss. A blank message will do since it's all automated - nobody will read what you send.

Stupid Scanner Tricks is moving to a new home with a lot of new features. This is different than the above website which just takes care of this e-mail group. Our new home is more of a radio portal site. You can get news, e-mail, links, and search the web for any kind of info by using our advanced search engine which will serach other search engines, giving the best results from Yahoo, Excite, Lycos and others.

Find MP3's, newsgroup postings, and more.

http://www.stupidscannertricks.com

We are still developing the site (improving load times and adding features), but wanted to give you all a first look at it because as a member of our group, you are our favorite people. :)

Do you have a job posting?
Or want to run a special offer for the group?
Or would you like a few beta testers for your new program?
Or even want to share the nifty software you came across?

Feel free! This list has well over 1000 subscribers waiting to share information and learn more about scanners. We want to be your number one resource for announcements and press releases!

Do you have a radio related website? Be sure to list it in Stupid Scanner Links! We have categories for Ham, Shortwave, CB, and of course Scanners. Once you are added to the list you are automatically set up to have your site rated and reviewed by visitors to Stupid Scanner Links. And you can also have your visitors do the same by simply cutting and pasting some HTML. See how your site rates against others in our mini Yahoo of radio sites with our own star rating system.

Want more? OK! Get free website stats from us to track how many visitors you are getting, plus what size screens they have, their Java capabilities, and much much more info. Just sign up for our free site stats service, cut and paste our HTML and you are on your way!

Not getting the visitors you though you were? Then I guess you should sign up for our free banner exchange! Sign up with our simple form, then just copy and paste our HTML onto your site and bingo! Your swapping banners with our site and others in the exchange. More exposure means more hits.

Don't have a website, but want people to know you use a scanner? Get our free web based e-mail! Yourname-@... with 6
megs of storage space - twice that of other services. Plus free spam protection, zillions of unused names, and you can read your mail from other services like AOL or WebTV from the same account.

All this great stuff is available from:

http://www.stupidscannertricks.com - the new radio portal

original article:http://www.egroups.com/group/stupidscannertricks/?start=2418
> IM sorry if this is a bad question but why would one need 100 scanners ??

Maybe he's going to resell them, or maybe he's like me and loans his scanners
out to friends "just for the weekend." Now my friends want to *buy* them
from me, but they're PRO-2004's and PRO-2006's. I don't want to sell them,
but I'm keeping my eye out for other scanners for my friends.

One of the early issues of "Popular Communications" had an article bu a guy
who had a bunch of scanners, maybe 8 to 10 scanners. I counted once and he
was able to monitor something like 64 (!) channels. I did like his
setup, though. Each scanner had a separate speaker. I would have gone further and
labeled each speaker to show which scanner was connected, and certainly added
an LED or some kind of indicator to show which speaker was active.

He might also be using them at something like a group home to give the
residents the opportunity to hear what's going on in their neighborhood.

Citizens Band Radios (CB's) are on the following freqs. I doubt thats what they're using though.

Channel 1 - 26.965
Channel 2 - 26.975
Channel 3 - 26.985
Channel 4 - 27.005
Channel 5 - 27.015
Channel 6 - 27.025
Channel 7 - 27.035
Channel 8 - 27.055
Channel 9 - 27.065 (Emergency Channel)
Channel 10 - 27.075
Channel 11 - 27.085
Channel 12 - 27.105
Channel 13 - 27.115
Channel 14 - 27.125
Channel 15 - 27.135
Channel 16 - 27.155
Channel 17 - 27.165 (unofficial trucker channel)
Channel 18 - 27.175
Channel 19 -27.185 (official trucker channel)
Channel 20 - 27.205
Channel 21 - 27.215
Channel 22 - 27.225
Channel 23 - 27.255
Channel 24 - 27.235
Channel 25 - 27.245
Channel 26 - 27.265
Channel 27 - 27.275
Channel 28 - 27.285
Channel 29 - 27.295
Channel 30 - 27.305
Channel 31 - 27.315
Channel 32 - 27.325
Channel 33 - 27.335
Channel 34 - 27.345
Channel 35 - 27.355
Channel 36 - 27.365
Channel 37 - 27.375
Channel 38 - 27.385
Channel 39 - 27.395
Channel 40 - 27.405

Channels 4, 8, 12, 16, 20 and 23 are also remote control freqs

The Uniden Bearcat-BC7 has CB scanning frequencies, but you could also find out the CB range for Ohio to scan. You may want to keep in mind though that they may be transmiting on more than one frequency on any given day. I hope this helps.

Well...one way, is to go to the FCC's Freq. Database, another is to go to radio Shack and pick up a copy of Police Call, Police Call Plus, or Beyond Police Call. It is updated yearly, and comes in volumes listed by state

Hope this helps

2440. [SST] Not really a scanner question... Hacking cordless phone hardware :-D

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-25 00:57:51 UTC
From: Andrew Koch
Topic: 2429 Message: 2440

Alright... I just had some fun soldering a cordless phone back together after an unfortunate meeting with a hammer...

I was wondering if theirs anything I could do to it to make it a 40 Mhz transmitter.. I.E. make it so that it skips looking for it's base unit and just opens up on one of it's 25 possible chans...

When you turn it on, it transmits on 48.84 49.02 49.83 for about 3 seconds each.

I assume that it's looking for a base..

Anyway, the phone is a RatShaft 25 chan cordless, cat no 43-1051

Any suggestions for me so that I can break the FCC regs?

Andrew

Marshall:
I got your message via stupid scanner tricks. Thanks for taking the time to send the response. I imagine what you are saying is that the characteristic impedance of the antenna currently on there is NOT 50 ohms and the bnc has a 50 ohm impedance, but honestly, I think it goes far beyond that, Since the BNC connector doesn't have a proper ground connection to it (if you remember I mentioned that when I hooked up the negative battery terminal of the radio and when iI hooked up the rubber duckie which is actually a 1/4 wave helical 20 mhz bandwidth 450-470 antenna, it worked only the SAME as the original antenna (by the way the "rubber duckie you stated as the original is NOT a rubber duckie, but a helical 1/4 wave centered lead antenna with NO GROUND PLANE. Anyway, for what its worth, that's my predicament, I doubt anything can change the range problem except hooking up a higher antenna at the base, but given the interference of this band, I doubt I would gain anything but more intermod living in metro NYC. Thanks anyway, Marshall!

Topic: 2434 Message: 2442

There is a way to go into the FCC's freq. database online, but I find it a bit confusing, and have stuck to other websites. I think this is the site (or at least one of them)
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts
Also, check www.fcc.gov , there is sometimes pretty interesting articles about radio communications there as well.

From: Q Dude
Topic: 652 Message: 2446

Just wondering about the legality of mods, tell me which of these are illegal:

1. Asking for mods (only legal purposes)
2. Asking for mods (can be used illegally)
3. Asking for mods (always used illegally)
4-6. Reading the mods (3 options above)
7-9. Making the mods (3 options above)
10-12. Using the mods (3 options above)

It's not that we hate them! It's just our pet names for 'em :)

Like on a woodworking list, the call "Craftsman" "Crapsman" and how we call
Windows Win-Blows (Well, OK... I'm not to fond of Winblows) or Word
Perfect, Word Defect...

Unfortunately, with the new wireless privacy act (which is not law, YET)
would make it a crime to POSSESS any information regarding modifications.
I view this as more of a scare tactic than anything else, but when
legislation like this comes around, they are always eager to make an
example of someone. Take my sound legal advice: be discreet. Just because
something is legal doesn't mean that agents of the "Home of the Free &
Land of the Brave" won't hassle you if you make yourself obvious. It's
perfectly legal for them to bring frivolous charges that will stain your
name, cost you most of your savings in legal fees, and scare your loved
ones. Truth is: your damned if you do, and damned if you don't, so enjoy
life and be discreet.

The problem with RadioShaft is they had economic stakes in the expansion of wireless phones. For years, radio enthusiasts were number 1 at Radio Shack. Then, they figured that more money would be made by selling wireless service. So in exchange for increased profits, they sold out to the wireless industry and gave radio enthusiasts the cold shoulder when it came time to fight the growing burden of anti-scanner legislation. They used to sell some heavy duty radios, but now they sell Chinese toys. That is why they are RadioShaft. They gave the shaft to the very folks that made them so big to begin with. They're as trustworthy as Judas Iscariot.

About the Radio Shaft store and why everyone rags on it...
I do know some facts. Truckers are the experts on CB radios.
#1. Check ANY truck stop on Any highway in America. Find their CB radios and see how many Radio Shack radios you can find for sale. Better yet, some truckstops even have CB radio repair shops inside them. Ask the radio technician there why truckers will use ANY CB radio except a radio shack radio.
#2. I have owned 4 Radio Shaft Cb radios. None lasted a year. And every technician I brought them to could not repair them. Actually only one accepted the challenge and even tried unsuccessfully.
#3. Parts for my radios were no longer available even though they were only 6 years old.
I could go on...

Yeah, i had that problem too, cheesy radio scrap CB's... they are made to look like a normal radio like the rest, but are manufactured and assembled differently then a good quality CB.
Also, my R.S. handheld scanner doesn't sound nearly as good or recieve like my father's bearcat handheld..
I have nothing against Radio Shack, i use alot of their parts for other projects.. but I won't buy any more radio equip. from them..

david
you can not hear them unless they are not on freq hop
unless you own a singars radio which are not available to civilians
this radio hops or scambles 74 freq per second so basicly it is imposible
unless you have one of there radios
if you what more info e-mail me
wally

From: jeremy
Topic: 2457 Message: 2457

This has been a past discussion quite a few times on SST. I always thought it wasn't illegal to listen, you just couldn't discuss what you were listening to (Which, I suppose would make no sense, so i think i understood wrong)
But I am pretty sure it is illegal to listen in on the phones now.
Although, they are still recievable on the scanners in the upper 40 mhz and 900mhz bands as well, so i'll be awaiting input from others in the group as well.

Why?
My list:
#1.High defective rate on parts
#2.Inflated price on parts
#3.Inflated price on just about everything else
#4.I used to work there. High pressure to get names/addresses, push the charge card, make commission; and commission cuts for Christmas season.
#5.I used to work there. Working inventory til 3 AM after a 9 hour selling day.
#6.They still haven't realized where their market niche really is, and therefore have not fixed #1-#3.

I get my parts from Electronic Golmine, Jameco, or AxMan Surplus (local business with all kinds of cool stuff). I get my equipment through online auctions and at pawnshops. Better stuff, better prices. Manuals available online or at military surplus stores.

I've never had a problem with Handy-Tandy's junk mail. Just the junk.

2462. [SST] Help!!! I want to buy a scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-26 17:43:44 UTC
From: paupaul99@aol.com
Topic: 2462 Message: 2462

I am completely clueless on this subject. I want to buy a used scanner that can pick the usual stuff and also built prior to 1993 for ovious reasons. Will any scanner do what I want it to, or will it have to be programed? for certain freqs. I was looking at a BC 760xlt, a BC 700a, Rs pro 43, and a Regency 800. Any sugesstions or help with this questions woulds be much appreciated. Will these units work from the get go?.....Thanks in advance Paul

how can the police tell if you are listening to phone converstions
on your scanner ?

Jarred Pfeifer <jpfeifer@...> wrote:

Is it legal to listen to cordless phones? I have been warned that it is
illegal and that the police could show up at my house.

When you squawk about rat shack, don't forget the fact that they never have the part you need at your local store so you have to go out of town to get it if you really need it.

That little red light on their scanner detector lights up. :)

..actually the most common method of detection involves someone who
has overheard something juicy while snooping on a neighbor telling others
about it or snickering and giggline when they next see the person...

Don't limit yourself so. I picked up an AOR 1000 communication receiver at a pawnshop for $50 in '98. Complete coverage from .5MHz to 1.2GHz. I got rid of my RealPlastic Pro-39, Pro-43, and Pro-23 soon after. The AOR also permits manual selection of AM, FM or WFM modes. My point is that sometimes the obvious solution is not the best. I sincerely hope you're not seriously interested in cellular monitoring. Not because I use cellular--I don't. But I find it a boring and fairly juvenile pursuit. Good for a little amusement and novelty. However, the same frequencies are used by other services: I once overheard a simplex conversation on a cel freq. (I forget which) that sounded like a law enforcement tactical exchange. That was in Issaquah, WA. paupaul99@... wrote:

They can't. While actively "scanning" a set of frequencies, your radio will give off a detectable emission, but so does your computer, microwave oven, electric razor.....
While stopped on a given frequency, you are just receiving an incoming signal.

2471. [SST] Re: Antenna question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-27 02:20:54 UTC
From: JasonHouch@aol.com
Topic: 2471 Message: 2471

I am trying to listen to a large county trunked system that is broken up into several sub systems. I have a distant sightline to most of the repeaters (within 10 miles). On a couple of the sub-systems, I get pretty well consistently. On others I either get intermittant clear and broken or not at all. I have 4, 895XLT's and an 835XLT for trunked and an AR 8000 for conventional listening. I use 35' Beldan 9913 with a Radio Scrap star shaped antenna on the roof. Any suggestions as to how I can improve reception? Is there a book titled "Antenna Systems for Dummies"? Thanks

2472. [SST] scanning cordless phone calls illegal?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-27 04:14:50 UTC
From: yelrihs49@aol.com
Topic: 2472 Message: 2472

I have had a scanner for 11 years. I have always listened to cordless phone calls. The thing is don't ever think about using anything you here for your own gain and it is considered "for entertainment purposes only" Best thing to do is keep it to yourself. Just be smart about it, that's all.

2473. [SST] My 2cents on mods, cordless phone monitoring, and RadioShack

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-27 05:33:36 UTC
From: Mark R.
Topic: 2473 Message: 2473

Listening to cordless phones may or may not be legal, but one stupid way to find out is to blab what you heard on a conversation. I heard about something not good for the people of my city, but didn't say a word, as that can only help you get into trouble. So, if you really are bored, listen, but I advice against it, for legal reasons.
The new Ghz phones out, have little security, if any, and are not digital. I have frequiencies if anyones interested.
And you can pickup cellphone images in the 490Mhz- 530Mhz range, but you'll get bored very fast.
I replaced the frequenices they were stored on my scanner, as it wasn't worth listening to.

Mods for the Pro-91? Sorry, there are not mods. Wait! I do have one. If you don't want it to work anymore, take a sledge hammer to it, than drive a truck over it, than a steam roller, and than toss it in your local river/lake/toilet. Feel free to skip any step given, as one will probably do.
Sorry, there are NO mods for the Pro-91. It is made after a law was passed saying the factories can't produce easily modifiable scanners. So its really impossible. If you want to pickup cellular or something, you'll have to import one from Canada or somewhere, because there will be no gap in the 800Mhz freqs and it is illegal to import them, and crappy if you get caught.
I had a Pro-91, so heed my words on this one peice of real advice. Do you have $10 and some change for tax?
Goto RadioShack, no its okay really, 5 minutes in the store can't hurt you, goto the antennas, and look for a bag with a handheld scanner antenna, that will pickup 25-1300Mhz, it is a telescoping antenna and you raise/lower sections for certain bands. It really helps, and has an excellent price!

Now my opinions on RadioShack. I agree their jump into the wireless market with Sprint is disgusting. Thank goodness for local shops, I feel proud to support the local people, who know what they are doing, and are in the business cause they like the hobby, although if they make any money, thats great too.
I walk into my local RadioShack, after they rearranged it sometime back, and there are telephones everywhere.
The aisles are towards the back. There is that cheap base scanner right there in front, $139 one, and the PoliceCall CD for $30(is it worth that much) on a nice stand. But on the otherside of that stand is cordless phones, the wall on the left of the store, PHONES, everywhere you look Sprint and telephones. The left wall does turn into computer stuff and and then into an aisle with the electronic parts. Its a maze to get to the aisles though, take a left, than a right, go left again, around the phone display. Anyone notice the computers they sell, and have on display there are empty? Maybe one is an actual computer, but when in the aisles and you

walk behind the computer display, you can see the display computer is empty, and a cardboard picture is placed inside to look like the connectors are there. Do they play a video on the monitor or something?
RadioShack is less for hobbyists these days, the scanner and other radios display behind the counter, is never lit up, the prices are hard to read, even for my young 20/40 eyes and when I had 20/20, it was the same.
Final thought on RS, you've got questions, I doubt the salesmen have the answers, espically when you know the correct one.
RS throws phones in your face as soon as you walk in..

So please, help control the local hobbyist population, have your hobbyist spade or neutered.....
Wait, that wasn't it.
Oh, we should support the local hobbyists and their stores first before RS when it comes to scanners/cbs/ham, and don't forget the pawn shops, where you can hope the people don't know the fair price of a scanner, and you can buy cheap.
Goodbye.

In lots of pawn shop scanners, nobody ever figured out how to clip diodes or clip jumpers, so most used radios will have to be cracked open to be modified. It depends how "Gestapoed" your PD is. Most would be clueless, but some could point a yagi antenna and listen for the radio signal that EVERY scanner emits. This tells them also what frequency you are listening to.

If you want to get really good signals, use a large television antenna and point it at the tower you want to hear. Use an outdoor matching transformer and matching cable (you may have to find rg-6 cable). Also, I think one thing that never gets stressed here is safety during antenna installation. Remeber:
Never work alone
Don't attempt more than you can handle
Don't install an antenna anywhere even close to power lines. Most neighborhood electric lines are UNINSULATED (if they appear to be insulated, that is most likely a neoprene weather coating that WILL NOT protect anyone) and most run at 7,200/12,470 or 19,900/34,500 volts. It's always sad to hear about someone getting electrocuted from an antenna.

> get go?.....Thanks in advance

Hi. I'm even more clueless...What are the Obvious
reasons refered to? I'm a firefighter in Rhode Island
and all my scanning is really limited to fire/police
service and additional interest has just started to
grow for me. I just don't know enough all around. I
have a portable radio shack scanner w/ 200 channels
and it works great for what I do but I'm certain there
is a lot out there that I'm missing out on. Any
advice for a newbie? Also how about national guard,

Army, Navy, USMC, USAF frequencies I could pick in my area? I checked an online listing and after programming what I believed to be the Air national guard freq. into my scanner I immediatly picked up the baby monitor down stairs. Now I know Rhode Island air guard can be rather juvinile but I really doubt they would use a baby monitor.
THanks for your help folks.

Hi Guys/Gals,

Does anyone know anything about a mod for the Radio Shack DSP 40,
digital audio processor ? I am told that there is suppose to be a mod
for the unit that will improve its performance to be near the NIR-10.
If you know where this mod is someone please send me the URL for it.

Thanks and 73'

Exactly. And one thing I've noticed about some VHF-UHF TV antennas is that
it will receive VHF in one direction and UHF in the opposite direction
because the reflectors are designed differently. So the best thing for
this dude to do is point his TV antenna around until he gets the best
signal possible.

2486. [SST] YAGI Antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-27 21:37:26 UTC
From: Alex K.
Topic: 2486 Message: 2486

A YAGI antenna is basically a uni-directional antenna, so you can find where the signal is coming from by pointing it in a certain direction. I read an article once about the FCC using these to find pirate radio broadcast.

On Thu, 27 Jan 2000, Wayne R. Hatfield wrote:

> I would like to know what and how this (YAGI antenna) is and works.

Well, a yagi antenna is an antenna made of several elements that are parallel to each other. The antenna is very directional and it receives in a direction perpendicular to the elements. There are three types of elements and each serves a specific purpose:

Reflector: it is positioned at the back of the antenna (away from the signal) and it reflects the signal back to the active part of the antenna.

Directors: there can be several directors and they create a more intense electromagnetic field around the active element (you could say that they "pull" the signal in).

Driven Element: this is the active part of the antenna. It is between the reflectors and the directors.

This antenna is built to respond to a specific frequency range. They point this very effective antenna and pick up the Intermediate Frequency (IF) produced by your scanner (this is typical of all superheterodyne receivers). By doing a few calculations (instantly with a special computerized receiver), they know exactly where you are by triangulation and they know exactly what frequency you are listening to.

If you don't think your scanner emits RF, just take another scanner and tune it about 10.7 MHz lower than the first frequency and listen for the dead carrier.

A couple of things to remember when using yagi antennas. They can either be horizontally or vertically polarized, they all have minor radiation lobes (in other words, they can either receive or transmit in many directions, but usually have one or two major lobes), and no two antennas will receive EXACTLY the same.
The elements acts as parasitic elements to each other the bigger being the reflector and usually this one is opposite the target station the director usually is closest to the target station. Hope these tidbits help.

Its a 2 way street. Just because you assume you can transmit ok, don't believe it. You either receive AND transmit ok or not. One cannot possibly know EXACTLY if one is transmitting or receiving accurately without the proper equipment.in this case what is called a Voltage Standing Wave Bridge., commonly referred to as an SWR Bridge. BEWARNED, not all SWR bridges are the same, but at 27 MHz the accuracy is not a priority. First off, you must check to see that your coax cable is ok and not dried up or cracked. Then you have to make sure the continuity is ok (no shorts between ground and the radiator lead). THEN you have to hook up the SWR meter in-line (series) with the CB output and your antenna (best point is as close to the antenna as possible) At this point, switch the SWR bridge to the forward position, adjust the dial for full scale deflection, then switch to the ref (reflective) position and read the SWR. If its 1.5:1 or greater, your antenna is not matched properly to your CB and you will have to either lengthen or shorten your antenna. Hope this helps. You can get the SWR bridge at Radio Shack or better yet a good electronics supplier.

Travis, assuming your CB radio is not wired to your trucks alternator circuit, try wiring the CB radio directly to your trucks battery, but remember to turn it off after you park, turn off the ignition. Second make sure that steel whip is fed with good quality coax cable and ground the shield of the coax to your trucks body frame. This should improve things abit. Make sure your coax connection at the radio itself is solid and tight, 90% of the bad reception is caused by poor solder joints in the connector weather it be PL259, or BNC, make sure that center pin is connected solid and clean to the center wire in the coax.

2503. [SST] Re: [[Help!!! I want to buy a scanner]]

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-28 15:56:07 UTC
From: Allyn Taylor
Topic: 2503 Message: 2503

"Obvious reasons" refers to cellular frequencies being blocked on US scanners since 1993. Initially, the block could be defeated by cutting a jumper, clipping or installing a diode, or by a software reset. I found cellular monitoring rather dull, as I am not inclined toward eavesdropping on discussions about pizza orders, what's for dinner, etc. Just my opinion.

Travis,
RadioMitch and John Christopher have the best advice for you.
I can only say that it is easier than it may sound to do what they say.
#1. Check the coax line for beaks, dryness, any place where the car body metal is making contact through a hole in the insulation of the coax.
#2. Make sure the metal of your car is not making contact with the antenna. (That's why they put tennis balls halfway down antennas on vans and trucks)
#3. Get an SWR meter from any radio store and learn how to use it. It is very simple. RadioMitch explains how.
#4. I differ with John Christopher in that the static will cease by wiring directly to the battery of your car. It may or may not, and I would prefer using the car's harness somewhere else because it may be filtered by any filters already installed in the harness. Directly wired to the battery you will not be using the car's manufactured static dampening filters. My experience has been that it depends on the car though. The static comes from cheap plug wires on the distributer. You may have to buy more expensive plug wires.
#5. We are in a peak year for sunspot activity, meaning there is more static on the CB and shortwave freqs. Some of it may be natural and a healthy sound to hear on a CB meaning it is working just fine. Good static will sound like a rushing surf with lots of voices in it. Bad static will sound like an electrical short or a buzzing bee.
#6. Make sure your connection at the back of the radio is clean and tight. And if there is a connection at the antenna, same there too.

Radar
#5.

2509. [SST] Re: Antenna question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-28 19:14:44 UTC
From: tguess1@airmail.net
Topic: 2471 Message: 2509

Group,
As a engineer I am hesitant to write for fear of sounding like a
Scanner Snob.. But here goes.
There is nothing like a cut to frequency or cut to band of frequencies
antenna. The TV antenna sounds great for the limited band it was made
for. But it has several deficiencies. #1 it is very narrow in receive
angle and has a high rejection to the sides. So if you are not looking
directly at a weak signal you will very likely miss it. #2 What about
the frequincies out of the V or U band.? At 800 - 900mhZ a TV antenna
can, on some ocassions, actually be less than unity gain. The real
watch word is height. Use a broad band antenna - Larsen Discone - and
get it up in height. The ARRL publishes some propaganda about antennas
that can be useful, even a old copy of the ARRL handbook (Cheap) can
give you some info. My suggestion is if possible go high with a good
feedline and if needed a broadband amplifier. But then don't complain
about the intermod crud..

Hi Guys/Gals,

I need some help locating a transistor ..... It's an ECG 473. It's not available from Phillips. It will have to come from someone who has some "Old" stock. The transistor is an Silicon, NPN good for frequencies in the range of 130 to 180 Mhz. and have an RF output of approximately 1-2 Watts.

Thanks .....

2511. [SST] Help w/ discrminator

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-28 21:58:08 UTC
From: From: SIscanner
Topic: 2511 Message: 2511

I recently did a discrminator tap to may scanner but I cannot decode MDT....
I plug the tap into my line in on my computer and i can hear the audio from
the scanner.
The MDT program says monitering but never does anything. Im pretty sure I
did the mod properly
I have another scanner w/ out a discrinator tap and when I plug the
headphone jack into
the audio in jack on my computer than using the mdt program I click on
analyze signal i see something like

```
__
|___| |___
```

but when I do it w/ the desrminator tap I see

```
_ _
| |_| |
```

something like that but more closer together so im
pretty sure I did the mod right but i don't know why the program won't work.
Someone told me I need to add a tantalum capacitor....would that help/ how
would i add it?

Be sure to check one thing out before going any further. Make sure that the only thing that the center conductor ever touches is the antenna, be sure the antenna is completely insulated from the body of your truck. Make sure that the radio is negative ground. If that doesn't fix your troubles, more than likely, you got one of the bad radios that Cobra has made many of. The problem that usually causes a radio to do that is improper grounding of internal components, especially the mic connections. If you still have trouble, e-mail me.

And also, if the static occurs only with the engine running, that is a sign that your ignition system is putting out a grievous amount of RFI that can only be eliminated by using shielded coaxial cable for your plugwires.

The tantalum cap is placed between the sheilded cable and the disc output. It serves to filter some stuff and to protect your FM disc chip from getting fried by a static spark. To monitor MDT's, I'm pretty sure you have to build a Hamcom data-slicer and run it's output into your PC com port.

I'm just telling you what the transcripts from the review said. I found it quite by accident in the government documents section of the local library. There are tons of laws that contradict previously existing legislation. For example, laws that define probable cause for searches and seizures don't seem to take into account the existance of the Fourth ammendment, but then again, personal freedoms are not much of a priority these days.

2523. [SST] New Ghz Cordless Phone Frequencies

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-29 02:14:47 UTC
From: Mark R.
Topic: 2523 Message: 2523

The listed frequencies are for educational purposes only, and listening to them, may be illegal in your area.
Please check your local laws for details and excercise caution.

Okay, these are the freqs some asked for. These are the ones I have found in a frequency search on the scanner, and were active, as I have done more than one search of that part of the radio band, there is more than one search would find, but may not be all.
These are probably the 1Ghz phones, and will not be the 2.4 Ghz, as my scanner will not pickup those. Although I do not know the pairing of Ghz phones, so these may be asigned freqs or images.
I'm surrounded with freqs from these phones, to enter another neighberhood I find less of these in use.
So it varies by area, and how many people around you use them.

Another search of the below area may reveal more to store in your memory banks.
Have fun, and don't be stupid. Do not let what you hear ever leave through your mouth, this will only get you in trouble, and make the other hobbyist scanners look bad, mainly because of the media.

2524. [SST] Re: help with CB reception

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-29 05:54:39 UTC
From: RadioMitch@webtv.net
Topic: 2500 Message: 2524

Monica:

In regards to the static on his radio, he may be better to hookup the radio to the battery IF and only IF, he get a large amount of alternator WHINE, on his receiver, which is a whining noise which changes pitch as you accelerate, this often happens as a result of the commutators in the bushings of the alternator acting sort of as an rf generator which adds to the problem. Another suggestion would be to use coax as the battery cable into the radio if the noise is coming from the B plus line. One other suggestion, there are a mirage of filters available widely through electronic distributors to suppress static and noise on your radio, you can also check in many CB & Amateur radio flea markets and breaks., I used to use a double braided RG-8X cable which radio shack actually sold which was excellent (sounds weird I'm giving RS a thumbs up on something, right?)

One last bit of advice, being a ham radio operator, I have found many manufacturers
of ignition wires carry RF suppressive wires that will actually attenuate the high frequency popping noises that come from the ignition, just remember they also have a higher resistance in your ignition system, though.

Hi Larry.....I don't know where you live but a very good source of transistors is Hamfests, there is one coming up March 12 here in Indiana, and if you haven't found it by then I will try to locate it for you. I have made a hard copy of your request and will keep it until you notify me that you have found it. I attend nearly all the hamfests in Indiana, mostly for the fellowship.

From: tguess1@airmail.net
Topic: 2500 Message: 2530

The other thing to think about is that the body, frame, and/or bumper may not be electrically grounded together. A bunch of 24 inch X 1/2 inch ground braids going from the bumper or fender to the body, the motor block to the frame/body,as well as from the exhaust system to the body/frame may help. Newer cars are notorous for being floating grounds.

2535. [SST] New CB

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-30 02:13:53 UTC
From: colby@nni.com
Topic: 2535 Message: 2535

I own a UNIDEN 76XLW (40 channels with 3 weather channels)and am not very happy with it.

Please let me know of a fine quality cb radio. The more I read, the more i get confused.

People say forget the common name brands, Radio Shack, Uniden, etc., and go with texas ranger, galaxy, etc.

I need a 40 channel with weather, and would like more than 4 watts because everybody seems to be blowing me out of the atmosphere. I hear forget SOUNDTRACKER, there is a newer version with a backlit display, and on, and on, and on.
I use the radio in a 1999 Dodge Ram 2500 Cummins diesel with a 2' Firestick mounted on the front left fender.
Thanks for your experience.

2536. [SST] Re: YAGI Antenna

> broadcast.
>

A Yagi antenna looks basically like this:

```
| | |
| | |
---+-----+-----+
| | |
| | |
```

Each element is a percentage of the frequency... with the center element
being a half-wave dipole antenna...

The only problem is that a Yagi antenna at cordless phone frequencies would
be about 10-15 feet tall!

Andrew

A lot of cars have braiding between the bumper and the chassis, I know mine does, he can completely eliminate a lot of his problems by using a magnetic mount antenna like a K40 stuck on the middle of the roof which is the best place to put an antenna on a car for the best omnidirectional pattern, if he doesn't want to use a mag mount antenna (given the current price of magnets) he could also use a fiberglass whip to solve a lot of SHORTING problems associated with a 1/4 wave stainless steel whip also.

Yep. You can order them directly from the bowels of just about any old
radio you find at Goodwill or a similar second hand store. Buy an old
broken radio for a buck and you may find one or two in there.

Is there a difference between cell phone freqs and cordless phone freqs? and I need to get a better antena for my RS Pro 94. I live in a huge neigborhood and I cant believe that nobody has a cordless, I think that they do but I just cant pick it up. Im using an ols scanner antena thats about 2 1/2 ft long. I have no idea what kind. Does anyone have any suggestions?

Also, check out Digi-Key in Thief River Falls, MN
They still sell open variable capacitors -- OR attend the Dayton Hamvention
Bob
www.qsl.net/n8exf

PT Barnum may have been correct, how else can you explain eBAY?

2544. [SST] cb reception update

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-30 07:09:40 UTC
From: Travis McSherry
Topic: 2544 Message: 2544

thank you to everyone who responded and i'll try the ideas out i also noticed
that the overwelling static that i hear is only present when my engine is on i
plan to take it back to the place where it was installed only a few days ago
and see what they can do about it

2545. [SST] Re: Listening to Cordless Legal or Illegal

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-30 12:57:30 UTC
From: kepi blanc
Topic: 2457 Message: 2545

Is it legal to listen to cordless phones? I have been warned that it is
illegal and that the police could show up at my house.
****
No, it is not legal to listen to cordless phones. However, the law is virtually unenforceable. The police or the Feds would have shown up at my house years ago if they could tell that I was listening to cordless phones, but they'll never know as long as I keep my mouth shut. The same applies to you.

Did anyone see the story on NBC's 'Dateline' about the guy who was arrested for harassing the people who lived around him? He listened to their cordless phone calls, took a lot of notes, and then started phoning the same people in order to harass them. The police couldn't figure out who he was and neither could the phone company. He only got caught after telling one of his victims that he had a scanner. So, as long as you don't make big waves like that guy did and cause trouble, listen to as many cordless calls as you want.

Search and seizure laws only modify previous
legislation. All the 4th ammendment does is
protects against unlawful searches. it does not
define what that is. The type of law you where
talking about would directly controdict a major
act of congress.

I AND LOOKING FOR INFO ON LISTENING TO CORDLESS PHONES ON THE 49 &
900MHZ AND OR GOOD INTERNET LINKS WITH INFO ON THIS

NOT INTERESTED IN CELLULAR PHONE FREG. AT PRESENT

IS THERE A UNIT THAT WOULD TELL ME WHAT FREG. MY OWN HOME 900MHZ
CORDLESS PHONE IS USING WITHOUT LOOKING IT UP IN A MANUAL WITH THE
PURCHASE OF THE PHONE?

CAN I USE, BUY OR BUILT A DIRECTIONAL BEAM TYPE SCANNER ANTENNA ON A
ROTOR? (FOR THE HOME)

IS THERE A RECOMMENDED BOOSTER AMP TO USE IF I HAVE BUILT THE BEAM ANT
TO ZERO IN ON A DISTANCE CORDLESS PHONE IN MY NEIGHBORHOOD

WHAT IS THE BEST OMNI SCANNER ANT TO USE ?
FOR A HOME AND OR A MOBILE VAN
ANTENNA SIZE IS NOT A PROBLEM

HOW DO YOU GET PASS THE VOICE BOX SCRAMBLER ON THE 49 OR 900MHZ PHONES
IS THERE A STANDARD SCRAMMER CHIP USED IN MOST PHONES ?

CAN I USE MY SPARE COMPUTER WITH A PROGRAM BUILT IN ?
LOOKING FOR A TURN KEY TYPE OPERATION

AT PRESENT I AM USING A
RADIO SHACK PRO 43
MODEL 20.300
200 CH AM /FM PROGRAMMABLE SCANNER
IS THIS STILL A GOOD SCANNER?

DISCRETIONAL LISTENER

Actually the air force use to use it to interfere with radar, its called chaff. I also heard a rumor which is probably not true that if you filled your hub caps full of strips of aluminum foil it can screw up police radar units.

Not only are listening in on cell phone and cordless phone conversations illegal, it is also illegal to listen in on background transmissions (SCA transmissions), Voice Paging services,
Remote Broadcasts from television stations, and encrypted and scrambled transmission.

As far as the police are concerned, I heard of a man stopped in Virginia for speeding, his car was searched with an electronic wand similar to those used at airports. The police found his radar detector within 10 seconds. The point I am trying to make is that if they can find a radar detector, I am almost certain they can find a scanner.

Yes there is a big difference.
Older cordless phones are in the 42-49Mhz, rough figure but search in there.
Ever notice your Pro-94, if you are in the US, won't pickup certain parts of the 800Mhz range, thats where cell phones are.
I doubt a Pro-94 will, but try in the lower 500Mhz range for cell phone images, you can pickup some conversations there.
Its possible all you neighbors are on 900Mhz phones, and maybe those phones are digital 900Mhz rendering them useless to today's scanners, unless you enjoy listening to the same sounds a modem speaks, pickup a phone on your computer line someday, if you are still a dial-up to the internet.

Okay, to try and recieve a better range of cordless phones around you, which is boring and I don't enjoy or involve myself in the practice, and if you do, keep it all to yourself. Don't need another Dateline NBC story making the good scanner hobbyists look bad.
Goto RadioShack, get the $9.99 handheld telescoping scanner antenna, and use it instead of the stock antenna or whatever you have which isn't picking up even a neighbor's phone. When I used a Pro-91, this greatly improved my range in all bands and I was able to pickup phones down the street, amazing my stock antenna didn't do it. Stock antennas usually suck, thats why other antennas are sold. This little bit of money spent is well worth it.
Someday, when you outgrow or get dissatisfied with the Pro-94 and they have a good trunktracking scanner out with extended frequency range into 1300Mhz(1.3Ghz or more), get one, as alot of people around me have Ghz cordless phones these days, and they have no security to scramble the radio transmission. Its amazing people would buy those and maybe think they were more secure.
We just bought a cordless phone and made sure it had digital 900Mhz, plus wanted to have caller id display and answering machine. We payed kind of high, but worth it. And people, when buying a cordless, make sure it says DIGITAL 900Mhz, not just 900Mhz. Unless it states digital, any scanner can pickup the 900Mhz and hear you, and if its not digital, be careful and make sure it has a scrambling feature. Not some dumb feature that only changes channels.
So remember, unless it says its Digital 900Mhz, its not a digital cordless phone, even if it has a nice digital answering machine, that doesn't count.
Hope this helps.

Aluminum foil is coated with a polymer that keeps the surface from tarnishing. This polymer insulates the foil from your antenna, thus it became a "Faraday Cage" which blocks radio waves out. Repelling the waves is exactly what it did.

The manual may not give you the phones freq, but may just give you the range.
The easiest way would be to scan the bands while the phone is in use.
You can dial into you local telco's milliwatt or a time/temp mumber to keep the phone busy while your are searching.
If it is a 49MHz phone, look for activity around 49.8MHz (49.5MHz to 49.9MHz) and again in the 46.4MHz area too. The 46 MHz band will have BOTH sides of the QSO.
If it is a 900MHz phone, you need to scan all of 902 to 928 MHz. My Utech phone is 912.3735 according the the freq counter. I have not looked for it with a scanner (call it lack of interest).

You can ALWAYS buy a scanner antenna - depends on how much money you have. One of the BEST scanner antenna is a good old TV antenna. They are very wide banded - providing you get a VHF/H-L/UHF. Modify it to mount vertically if you want maximum signal (no horz/vert losses), use good coax (RG6 or RG11 depending on loss/run path). It all depends on how obivous you want to be to the neighbors! I mean, how friendly will they be when they know you are listening to the household life thru the baby sitter monitors on 49.83 +\-.

Omni antenna - use a Discone antenna -- broad banded! Mobile, a tri-band VHF Ham antenna will fill most needs. (triband = 6m, 2m & 70cm -- Comet or Diamond are pretty good)
73, Bob

Just click on the link below, and sign up for an account at X.com. It takes less than two minutes, and we'll put $20 cash into your account to get you started. What do you get?

* FREE $20 cash deposited in your checking account
* FREE money transfers (send money instantly to anyone's email)
* No obligation, no minimum balance, no monthly fees
* Super-high interest on any money in your checking account
* FREE starter checks, and a FREE VISA debit card.
* plus, a whole lot more!

So click on this link right now, and come get your $20!

You can use a frequency counter and lift your frequency off the air instantly.

Truth is, that will mess up many types of speed Radar. That happens because the bottoms of the hubcaps are essentially moving at 0 mph and the tops of the hubcaps are moving at about twice the car's speed. The radar sees 3 objects moving at 0, 60, and 120, and that can really confuse it's computer. In fact, to calibrate speed radar, they use tuning forks much like the ones used to tune pianos (because the radar reflects off the tuning fork as it vibrates at the standard speed). If you ever want to talk your way out of a big ticket, ask the cop to turn on the radar and see how fast your tuning fork is moving as you move it in front of the radar unit. When the radar unit says your hand is moving at 45 mph, tell him that your car vibrates too and maybe the radar needs recalibration.

I don't care if my neighbors listen to me talking about some rash I just noticed, but I sure as heck DO CARE if a government official has listened to me talking about a bad 1040. The point is that little folks can't hurt you, even if they harrass you. But digital phones CAN be picked up by any government agency that fills out the requisition form for a digital descrambler. Think it can't happen? Think your right to privacy extends to US agencies? Keep thinking. There is a law that says all telephone company switches must be accessable to the Department of Justice. That means they don't have to bug your phone, they can just route all of your calls into any field office with phone lines and a tape recorder. Before any of you think I'm a whacko, just do a little research on telecom laws.

Both sides of the cordless phone conversation are found in the 46mhz range.
I now one or two by heart - 46.610 / 46.970 are examples.
Without that10 dollar antenna at Radio Shaft you will not pick them up
very well. You need that telescoping antenna, not the rubber duck.
Even with that telescoping antenna your handheld will only pick up about
2-4 blocks away. With a good home base antenna you may get as far as a mile.
Cellular phone freqs are very very different and they operate very
differently too. But that's a long story. I'll keep it short.
Radar

2567. [SST] Re: Re; LIKE TO KNOW ABOUT FOIL

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-01 08:23:29 UTC
From: Tim Suggs
Topic: 2546 Message: 2567

Well, let me start off by saying my Police Radar Certification is current. Most of the "cheaper " Police radar units (Speedgun, K-100 and older stuff) will only read up to 199mph. IF they clock something faster than that, it can damage the unit. I've seen many a radar unit go "belly up" because some bored officer tried to clock an airplane on the runway. Most planes rotate and lift off @ less then 199mph, and should be out of the effective range from one end of the runway to the other, but what smokes the units are the C-130 type PROP planes. The props do rotate faster than 199, and I have seen units sizzle and fry trying to clock these type of planes (No, it wasn't me!)

I have never seen anything "physical" mounted on an automobile that will defeat Police Radar, I have seen electronic situations that would interfere with proper operation/reception of the reflected radar signal, but nothing mounted in a vehicle. Even had one guy who tried to "fight fire with fire" by "shooting" me with his own radar gun that was the same type/freq as what I had assigned to my unit/area. No problem, I knew something was up by the reading and thought I saw him laugh his butt off as he rode by going to lunch, so I swapped areas with another patrol and went to the eating hole and looked his car over. There on the seat in plain sight was a K-100 radar unit just like mine. I swapped radar units with the other patrol when I took my area back, which operated on another band/freq and waited for him to return to work. POW! Right between the eyes! I got a 61 in a 25 zone. I pulled him over, and he was so upset that he run his mouth to the point that I got him to tell me he was using another radar unit, was even stupid enough to pull it out and show it to me. It came back stolen from another local municipality, so that was 1 ticket AND an arrest!

On to the "tuning forks" issue. Yes some units are calibrated with tuning forks, but even those tuning forks resonate at specific vibrations (speeds) when struck, mine were 30mph and 70 mph forks, thereby allowing you to check your unit for proper operation. I have stopped vehicles, wrote the ticket, then realized I hadn't checked the calibration of my radar unit yet, so I tore the ticket up, gave them a verbal warning and THEN checked the calibration then and there. And folks, please remember that all the high-tech stuff used is for the purpose of accurate detection and documentation of the offense and it not a game for most of us. If you're speeding, you're speeding, period. And if you can't see why that's not to smart in the first place, then you'll probably meet a lot of Police Officers.

You will never be able to talk your way out of a ticket. You may be able to give the Police Officer some information he was not aware of (such as you just turned onto that road and hadn't seen a speed limit sign yet), and he/she may decide to use his/her discretion and either give you a verbal/written warning, but you'll never "talk your way out of a ticket". And those that try, usually talk their way into a ticket, or maybe a closer look at those tires/light/horn/wiper/seatbelt/registration/insurance which might result in

additional tickets. I have always found that those who get out trying to show they have no "fear" of the law by running their mouth, usually deserve a very close and very long look, and you'll usually find something worth "talking about".

Just my nickel's worth (I passed .02 cents after the first paragraph).

Tim.

I saw a comercial while watching Howard Stern tonight for a scanner ready
for cordless and cell bands. I don't know how thier doing it but it probably

won't last long the # to order by phone is 1-800-324-8838 or (8828) I
barly caught the # the comercial was so quick! I don't have the $ so I'm
not even bothering...

Does that $10 dollar antena from radio shack have to be pointed in the direction of the ophone or does it pick up from all around?

>descrambler.

Very true. Best you can hope for without end to end scrambling of your own
design
is "enhanced" security with the digital 900 meg phones. I have a digital
spread
spectrum phone (a Sony SPP-S9101) and I dare any local law enforcement to
spy on
that (as many do to 49 meg and analog 900 meg phones) but that DSS phone is
about as secure from Federal snooping as a CB walkie talkie. Neighbors are
sure not going to hear
anything but what sounds like white noise if you have a 900 Meg DSS phone
though! :)

BTW: I recommend that Sony SPP-S9101 to anyone who is concerned about
security. Also
has fantastic range (I can well walk over a quarter mile from home with it
and still talk).

I have seen that commercial many many times and have noticed that it was a regular scanner! In fact i believe it was the SportCat 150!
Its a big scam!
And if you read closely it says on the bottom that you will probably need an outdoor antenna to listen.

2576. [SST] RadioShack Antenna Question Answered

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-02 06:20:39 UTC
From: Mark R.
Topic: 2576 Message: 2576

Trust me when I say this, and those who have bought it will agree, buy the antenna, it is a great improvement for such a low price. I believe it is omnidirectional, but pointing towards a distant phone, you may have too. Otherwise usually just having it up to the number of extensions necessary for optimum reception of that band, will be all you really need to do. If you have a base scanner, there is a antenna with a right-angle connector on the antenna, and its the same price. So, for handheld or base, its a good price for a great improvement.
Hope I've helped.
Mark R.

From: Mark R.
Topic: 2577 Message: 2577

Check out this link below, as the R3 looks like a sweet and promising scanner. The likes I haven't seen before.
Hope I can get one when the FCC approves, but imagine the price it will be! Our scanners are entering a new sophistication era. I expect to see alot more in future scanners.
This dealer has a picture and info on the R3.

http://www.universal-radio.com/catalog/widerxvr/3333.html

I'm excited, can't wait for its release, anyone have an idea when that will be?

Knowing some one is Using a Scanner is VERY hard there is only one REAL way, All Radio's, Scanners & TV ETC use a _SuperHet_ System Wear By what comes out your Unit's Speaker is Picked up and then Resent at VERY low power for the Amp to give to you, with some Radio's (Hi powered one) you can Pick up the _SuperHet_ from several chain away and hear what the radio is Tuned to...

This is about the Only way you could get Caught, That I can Think of...

Been reading this thread for a while now and I have to say that I believe it to be practically impossible for any one to "listen in" to your if freq and determine the frequency you are tuned to. I'm sure there might be some emission there but at such a low level that it would not be feasible for any agency to utilize. Perhaps another wive's tale for the newbies.

Before you disregard this thread, think about the signals that travel from space probes that are beyond 100,000,000 miles away. They are transmitted at about 1/4th of a watt. This nation that is advanced enough to send a probe beyond our solar system can't accomplish the feat of monitoring the IF carrier in a scanner 400 feet away?

Actually it is quite feasible. I've seen both ham radio and commercial
repeaters
suffer interference from scanners and I can tell when my neighbors have their
scanners on easily. (I've gone looking though)

I've actually keyed the old 147.435/146.40 Mount Wilson repeater in L.A. with a
Bearcat 101 from 15 miles south as the crow flies back in the late 70's.

The grey area is whether that type of "evidence" would be at all admissable in
court. Kinda sounds like "unreasonable search" to me.

Older scanners like the Bearcat 220, 250 and ESPECIALLY the 101 radiate
with more power accidentally then some modern cellphones do by design.

I will say that I've seen my RS Pro-2050 on a spectrum analyzer and my farts
probably generate more RF then it does.

How did you key the old Mt. Wilson repeater with a scanner??

Been reading this thread for a while now and I have to say that I believe it to be practically impossible for any one to "listen in" to your if freq and determine the frequency you are tuned to. I'm sure there might be some emission there but at such a low level that it would not be feasible for any agency to utilize. Perhaps another wive's tale for the newbies.

At 11:33 AM 2/3/00 , you wrote:

>How did you key the old Mt. Wilson repeater with a scanner??

I added the second IF freq of 10.7 Mhz to the repeaters input freq of 146.40 and the nice strong spur that old scanner transmitted was sufficient to break the squelch and key the repeater. It was not a very strong signal at all and was easily covered by users but it sure was annoying to the lower powered stations if you had that frequency in memory and were scanning. (cachunka! cachunka! cachunka!)

Most modern scanners do not radiate that strong of a signal, but some do! If 10.7 does not work you might try 10.8 or 10.85.

This trick is what turned me on to SST. I ran across the SST tricks list and saw
that trick in there and was thereby motivated to find out more about SST.

If anyone wants a scanner that radiates WELL I have an old Bearcat 250 that is for sale. Also have a Regency HX-1500 that is also for sale.

Those transmissions that tell you where an airplane is are called ACARS.
That can be monitored by computers and a decoding program.

Topic: 2463 Message: 2598

A few years ago, I had a conversation with someone from the FCC (this is before the mircro electronics era) and he told me at THAT time that it was easier to track down a radio pirate with a strong signal, BUT he also said they could pick up very weak signals and track them down almost as easily. This man had a SINGER field strength meter in his house with meters the size of a CD player, believe me, if it generates RF, it CAN be picked up!

THE 10 DOLLAR ANTENNA WORKS FOR MY SCANNER
I HAVE UESD IT FOR A YEAR AND IT IS THE BEST

AND I HAVE A PRO 43 RADIO SHACK SCANNER

USEING IT ON 49 TO 46 MHZ CORDLESS PHONES

AND IT WORKS ALSO WITH CERTAIN 800 CELL PHONES ALSO

Electronics is a facinating area of life, but I seriously have a problem in believing that ANYONE can access a mountain top FM Amateur Repeater with a Receiver circuit only. Now it may be possible under certain circumstances to feed and mix the receivers IF frequency 10.7, 10.8 Mhz into an FM transmitter stage, that will emit a large enough amount of RF to key the mountaintop repeater on 146.400 Mhz the repeaters input frequency, not the frequency you actually listen to activity with on 147.435 Mhz. For those of you who dont know, this Amateur Repeater has one of the worst reputations in Amateur Operator conduct. Since this specific frequency was used in this extrordinary claim, I suspect one of the repeaters members is trying to seek alittle attention. True, scanners do emit spurious radiations, but not enough to Key the 435 repeater. If it were true, the FCC along time ago would have banned the sale and manufacture of scanner radio devices.

Lets challenge the scanner users out there to a little test. If you can key an FM repeater with a Bearcat Uniden Scanner, video tape the feat with the back case off the scanner (this will verify that a transmitter section has not been added to the scanner) and start keying and monitor the frequency on a second scanner receiver while video taping. If you can prove it can be done, Im sure the CIA, FBI, Secret Service and a host of other legal radio users would be very enlightened as a matter of national security. By the way, old and new Bearcat Uniden scanners have no transmit key to send with, but there might be other ways to key the circuit under ideal conditions right?

I do not know about the 147.435 repeater, BUT as a tech, in a 2way shop, I HAVE used a bearcat 110 and 250 as a cheap and dirty signal generator. I have keyed local repeaters with a Cushman CE3 and an antenna on the roof, I have used a Wavetech 3000 to set off weather radios in the building down the street, and Regency was required to recall Polaris marine band radios because in the early 80's, they used to key up the 10/70 repeater in Cincinnati and St Croix, VI.

Now, newer scanners MAY have lower emissions and Regency learned the lesson when the FCC forced them to fix the L.O. problem, and the 10/70 repeater was moved across the county and does not look down on the river anymore... but these things ARE possible and I have seen them up close and personal (took over a year to find the carrier on 10/70!)

FYI, Bearcat IF was 10.8MHz.

And I did have fun watching the havoc caused by WX radios going off when playing with the Wavetech :)

Too bad I'm not a 2way tech anymore.

is the 147.435 rpt the "animal house repeater" that we have heard so much about??

Bob

meddle not in the affairs of dragons, as you are tasty when served with coleslaw and bar-b-que sauce.

TEXTS

REQUEST FOR REVIEW OF DECISIONS OF THE UNIVERSAL SERVICE ADMINISTRATOR. Extended by sixty days from the original ninety-days the deadline for taking action in various requests for review of decisions by the Schools and Libraries Division. Adopted: February 1, 2000. by Order. (FCC No. 00-28). CCB

REQUEST FOR REVIEW OF THE DECISION OF THE UNIVERSAL SERVICE ADMINISTRATOR.
Dismissed Providence Seward Medical Center's appeal as moot. Action by Deputy Chief, Common Carrier Bureau. Adopted: February 3, 2000. by Order. (DA No. 00-200). CCB

INTER MOUNTAIN CABLE, INC. Granted petition for special relief allowing waiver of the FCC's rules to the extent necessary to permit Inter Mountain
Cable to establish regulated cable rates on behalf of certain small cable systems located in Virginia, WV and KY. Action by Chief, Cable Services Bureau. Adopted: January 31, 2000. by MO&O. (DA No. 00-181). CSB

NORTHLAND CABLE TELEVISION, INC. Granted petition for special relief allowing a waiver of the FCC's rules to the extent necessary to permit Northland to establish regulated rates on behalf of certain of its small cable systems in Aiken, S.C. Action by Chief, Cable Services Bureau.

Adopted: January 31, 2000. by MO&O. (DA No. 00-180). CSB

TCA CABLE PARTNERS, INC. Dismissed a complaint filed against the Oct. 1, 1994, rate increase for the cable programming services tier in Bella Vista, AR. Action by Acting Chief, Financial Analysis and Compliance Division. Adopted: January 31, 2000. by Order. (DA No. 00-178). CSB

REVIEW OF THE FCC'S BROADCAST AND CABLE EQUAL EMPLOYMENT OPPORTUNITY RULES AND POLICIES AND TERMINATION OF THE EEO STREAMLINING PROCEEDING. Adopted new EEO rules to promote anti-discrimination efforts, broad outreach and industry flexibility. Dkt No.: 98-204, 96-16. Action by the Commission.
Adopted: January 20, 2000. by R&O. (FCC No. 00-20). MMB

AMENDMENT OF RULES TO ENABLE MULTIPOINT DISTRIBUTION SERVICE AND INSTRUCTIONAL TV FIXED SERVICE LICENSEES TO ENGAGE IN FIXED TWO-WAY TRANSMISSIONS. Granted in Part and denied in part request for stay of the
Reconsideration Order. Dkt No.: MM- 97-217. Action by the Commission. Adopted: February 1, 2000. by Order on Req.Stay. (FCC No. 00-27). MMB

COUNTRY COMMUNICATIONS, INC. Found that Country failed to demonstrate unique circumstances and lack of reasonable alternatives to warrant a waiver of the modification rules for Phase 1 220 MHz license, and denied its petition for reconsideration. Action by Deputy Chief, Commercial Wireless Division. Adopted: February 2, 2000. by Order. (DA No. 00-193). WTB

UNIVERSAL CABLE COMMUNICATIONS, INC. Dismissed request for an extension of
a temporary waiver of rules which requires that at least fifty percent of the customers on a common carrier microwave system used primarily to rely broadcast TV signals not be affiliated with the licensee. Action by Chief, Public Safety & Private Wireless Division. Adopted: February 1, 2000. by Order. (DA No. 00-189). WTB

ADDENDA: The following items, released February 2, 2000, did not appear in

Make your own weather broadcasts. "And for tonights weather we'll have big
rocks falling from the sky with occasional periods of poisonous frogs"...

>is the 147.435 rpt the "animal house repeater" that we have heard so much
>about??

Yes indeed it is. But what is there nowdays is just a toilet. Back in the
late 70's
and 80's there was a lot of talent and it really was fun to listen to and
participate
in back then. Now it is just a cuss fest with a very high proportion of
alcoholics
and drug users.

I was on there from 1974 through 1989. WA6NDT.

What sort of antennas and receiving equipment do those receivers use -
a lot more sophisticated than a local PD would have access to or know
how to use.

eGroups: stupidscannertricks digestHELP!!!!!!!
I have a Radio Shack Pro 62 and the battery main board fried on it the other day. I have a friend who can rebuild me one but I need the Schematic for it. Anyone know where I could get ahold of a Schematic for the Battery Board? Radio Shack wants 80 bucks to fix it and he can rebuild it for about 15 to 20 bucks if he has the schematic. Anyone with any sort of info would be helpfull,
Thanks
Paul

I really recommend the Rat Shack Mobile Scanner Antenna, I got GREAT reception when I mounted it on my roof, and it transmits very far with my handheld CB! (Plans for putting on the roof is at my site < http://www.calckid.8m.com/scanners.html >)

Good Luck

From: Monty Deluca
Topic: 2622 Message: 2624

What problems do you have with it? I was going to buy one. Next the Pro 92 is supposed to be good. But the best hand held is the uniden 245XLT. And it's less money. Please give me all the known problems with the pro 94 in FULL DETAIL. Can you change the batterys for a battery pack in the Pro 94 like you can do in the pro 92. The 245XLT uses barttery packs only.

2625. [SST] Announcement: New E-Mail Lists

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-07 04:21:38 UTC
From: Rich Barron
Topic: 2625 Message: 2625

Stupid Scanner Tricks.com is proud to announce the expansion of its ever popular, feature rich, e-mail list into new fields of interest.

With the sucsess of our 1100 member strong scanner list, we've decided to tackle the other radio markets as well, bringing the fun back into the hobby in a public forum. Say goodbye to the spam littered, content-free postings of the newsgroups. Don't worry about being flamed for posting a "dumb" question. Human moderation of the groups means only the top posts get passed on to the group - not the "Me Too's".

Visit http://www.stupidscannertricks.com/elists/ for more info and subscription forms or just send a message to the e-mail address listed below to be automagically subscribed.

These E-Mail Lists Are:

- Moderated
- Available In Digests
- Readable On The Web
- Better If You Contribute
- A Great Way To Promote A Related Product Or Service
- Free!
- Informative For New And Old
- Set Up To Let You Poll The Group
- And Have Browseable Archives

Stupid Scanner Tricks
stupidscannertricks-subscribe@egroups.com

The Best "Never Been Stumped" Scanner E-Mail List. Professionally moderated to stay on-topic and quench any flames. Plus press releases, product announcements, and special offers for and from members of this list. With 1100 members and growing, this list can generate a lot of incoming E-Mail (Hint: switch to digest mode)!

Stupid Ham Tricks - NEW LIST! Get In Early!
hamtricks-subscribe@egroups.com

People With Ham Radios Love To Talk. Otherwise they would have just bought a scanner. :) Join this list for your club and you can announce your ham swaps, testing schedules and workshops, and swap war stories.

Stupid Shortwave Tricks - NEW LIST! Get In Early!
shortwavetricks-subscribe@egroups.com

Learn A New Language The Hard Way! Tune into local or foriegn language radio programs from all over the globe. Now you can finally share your

tips and tricks with others who enjoy listening to the same programs you do! Join the Stupid Shortwave Tricks list today!

Stupid CB Tricks - NEW LIST! Get In Early!
stupidcbtricks-subscribe@egroups.com

Those Ham Radio People Got You Freaked Out? Get a CB and join this list to learn how to get the most out of it. 10-4?

Stupid Electronics Tricks - NEW LIST! Get In Early!
electronicstricks-subscribe@egroups.com

Heck, Anyone Can Use A Radio. But how many people can build one from scratch? Get nifty electronics tips, tricks, and ideas. Find out how to get started and come back for help.

Hey! Advertisers and Developers - READ THIS! We allow one free posting a month per comapny for related products and services and two two postings a month for new product announcements - delivered directly to your target audience's e-mail box for free. Need more exposure? We can consistantly deliver over 130,000 impressions a month on our e-mail list alone. Need even more exposure? We have banner ads, banner exchanges, e-mail co-branding, and free links listsings (with star ratings, popularity rankings, and reviews!). Visit http://www.stupidscannertricks.com for a look at what we offer.

its only illegal if you get caught. I have been listing for 20 years ,just keep your mouth shut about it and you will never have a problem with it. as a ham radio operator I would not be doing it if it were not safe. it also states in our constitution that any radio single that is transmitted though the air can legally be received? just a tid bit of information

2630. [SST] Rs $9.99 Antenna opinions and questions, plus my Icom R2 Scanner is up for auction.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-07 09:14:00 UTC
From: Mark R.
Topic: 2630 Message: 2630

If you are looking to purchase an Icom IC-R2 Wide-Band Scanner that is PC programmable, then check out the one I have for auction at eBay. Its in excellent shape, and I'm selling to get a different scanner, can't stay with one for too long these days. I had a reserve but its been met and surpassed, so it will sell!
Goto:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=253585325
And good luck!

I'm having email problems, so you might want to remind me of what scanner you use, what your area is, and some other questions I have forgotten. It has worked better than the stock antennas for most users. Ever been to Rich Well's Strogsignals.net website? Try www.strongsignals.net
It's a fantastic site, and Rich Well deserves some praise for his work and dedication to the scanning hobby and helping it keep strong. He has reviews on most of the scanners out there these days, and in an handheld antenna review, the RadioShack 20-006 antenna, the $9.99 one, was ranking very high during and after the tests, and came out very high in the end. The Ant-8 by Grove beat it, but its not produced anymore. Some scanner enthusiasts will tell me some of what I said was wrong, but I'm just too lazy to check the site right now, I read it a few days ago, and remember it placing high, in the top 5 or 10.
Maybe you got a bum antenna? Get a replacement. I think mine was taken back, due to the fact it was packaged back together different than the others, but I think it was just a refund deal, as the antenna has worked great for me. Not all the antennas can be good, so try a replacement. Those wishing for a base antenna review, should also check out Rich's website, for a review of the numerous antennas he uses in his shack, the cost of buying a bunch of base scanner antennas kind of rounded down the review in terms of quanity of antennas available to really review, outside of his own.
I hope this helps you and others. Moving into an apartment will get you tons of cordless phones around, of course I'm thinking of apartments in 2 or more story buildings, but I know there are larger apartments as half of a house, out there.
Being in a major city is a help, I'm in a mid-sized one, but theres plenty around. Like someone said, get it for those cordless phones you are so bored, you'd actually listen too.

From: brown82@MARSHALL.EDU
Topic: 2618 Message: 2635

There is a data burst on the standard weather channel frequency that tells the radio to come on. It sounds like 2400 baud paging (SCREETCH! SCREEEEEEETCH!) and then the severe weather anouncement broadcasts on the standard frequency as usual.

I sure believe it. I've had a cell phone antenna on my car for a year now, and I've always used it for my scanner with great results. The little coil in the antenna coincidentally makes it an excellent all-band antenna.

I think I can help. There are lots of modifications for allot of scanners at this site, type In cityofgreenville.com and click on Ham Radio at the top of the screen you will find a very comprehensive page with lots of great information. This is a great site for anyone who likes to play around with radio equipment and is filled with lots of realy great radio information

Sounds like the 2400 baud digital signal alerts the receivers alarm to trigger and opens up the squelch ckt?

2641. [SST] Re. new CB

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-01-31 15:35:05 UTC
From: Donald L. Tupper
Topic: 2641 Message: 2641

I see that you asked about the PC76XLW. That is a good radio as long as it
is set up right. I am a dealer and will tell you that everybody wants watts.
But when the watts are turned up then you audio does go down and you can not
talk as far and are not as loud. From what you said about having a antenna
(2') on the left front fender does not help. What you are doing is making
your radio talk and hear from the right rear and not front and to the left.
YTou need the antenna in the center of the car or truck to make it work at
top proformance. You also need to have the proper ground. That means do not
put it on plastic as a bumber or cap of the trunk. I hope that this does
give you some help. Have a good day. Don

2642. [SST] Again more on the $9.99 RadioShack antenna and picking up cellular phones.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-08 09:30:47 UTC
From: Mark R.
Topic: 2642 Message: 2642

Okay, someone asked this, so I must answer. If you get the handheld model, it's always straight up, its a telescoping antenna, so you extend it for certain freq ranges. If you move the antenna a little to pickup the freq better, its the whole handheld scanner you are moving along with it. The base model of this antenna, has a right-angle to the connector on it. The antenna does not swivel or tilt on either models, only the whole radio.

The 890-9** Mhz range is NOT cellular phones. They are in the 800Mhz range and are located in the blocked 800Mhz band of your scanner. The 890-9** Mhz range is those analog and digital 900Mhz cordless phones widely sold. You will only be able to listen in on analog 900Mhz phones, and the older 46-49Mhz cordless phones. Remember when buying a phone so it won't be easily understandable on a scanner, make sure it says DIGITAL 900Mhz, not just 900Mhz, as that means its analog. I saw this ad the other day, and it was for a cheap GE 900Mhz phone. Funny trick was, they made it seem like it had digital technology, fooling the stupid, but not false advertising by saying it was digital 900Mhz. What they did was, put a neat graphic near it, with 900Mhz in the middle, some square in a circuit form, with small and together, analog waves.
To the unknowing, they would think its that there digital.
Well, thats all for now.
Bye!
Mark R.

"We all"???? Who's "we"?? Certainly not me!! My AOR1000 may receive the freqs, but I don't bother listening. Not because of any legality issue, nor privacy issue, but because the conversations are so inane. However, occasionally I have stumbled upon a simplex conversation that sounded like law enforcement tactical in the "cel" range. Anyone know of any agencies using this range?

From: Andrew Koch
Topic: 2633 Message: 2645

Say what? Didn't this message go to the whole list, and not this one individual personally?

Andrew

Hey,goofball!Who cares if you are a cop?You posted an answer on a
public forum and don't like the feedback-thenDON'T POST!!!As for it
being illegal-it is a stupid law and probably unconstitutional to boot.

2647. [SST] I have something to say!!!! about colby@nni.com

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-08 18:07:26 UTC
From: MMAL24@aol.com
Topic: 2647 Message: 2647

If you are a cop and you think you can come in here and say dont email me about all of this illegal stuff than you shouldnt have signed up. It really bothers me that you would join a club and be big mr cop and tell people that you are going to get involved.

I really dont care if you are involved with the law, we cant get in trouble for talking about radios anyways. Your hobby is talking on the radio and our hobby is listening and if you have problems with it than get the F out of the club.

I dont know Ms. Rice but I think you owe her an apology. Everyone read below what he wrote to her. THAT IS FRIGGEN WRONG!!!

Does anyone agree with me???

colby@... wrote
Ms. Rice:

Please do not write me. I am ivolved with law enforcement. I do not even own a scanner. If you choose to write me again I shall and woll seek appropriate remedies against you.

2648. [SST] Re: Hello! web page would not open

From: Morris K. Lynch
Topic: 2633 Message: 2649

Why don't you find a group that is primarily for law enforcement and toss your weight around there. You might get it tossed back to you by someone in that group. If you do not have a scanner what are you doing responding to emails from the stupidscannertricks group?

From: RadioMitch@webtv.net
Topic: 2650 Message: 2650

The best place for an antenna on a car is the exact center roof of the vehicle. This assures for the most efficient antenna performance. It will also load the antenna better than a side mounted antenna to the transmitter. Actually I prefer a professionally installed center mount antenna, a magnetic mount antenna is a close second, but be careful especially if you are a ham and check the power rating of the antenna, before cranking up the power! Another antenna I like is the collinear which is a 1/4 wave cophased with a 5/8 wave, but make sure you tune it to the center of the frequency band you want to use.

Ohhh boy, my income tax refund is going to be big, I plan to buy the Radio Shack Scanner with 1000 channels and Trunk Tracking feature for $369.00 + Tax, not that I don't like my 150 channel one I have right now, but it can't do shit with it. But hey, I ain't got nothing to lose, except my money, hehehe, and oh, about the Coldless phone listeners, its allllll good.

Date: 2000-02-09 15:33:22 UTC
From: colby@nni.com
Topic: 2657 Message: 2657

I am getting confused, and I am colby@...
I am starting to think that somebody out there thinks I am a cop. I am also thinking that I wrote to this Ms. Rice about not writing to me. I am totally lost.
I was answering her about what my Uniden 80XLT can do so she may know what to expect from hers. I said, and described, what frequencies (cellular) that mine did in fact receive. I was being sarcastic when I said, "of coarse, I don't listen because that's illegal". Am I confused or what? I don't know nothing about this cop thing. Thanks!

You might find it interesting to read Monitoring Times Feb 2000 -- there is an article in there with a comparison of the Uniden Scanner and Radio Shack scanner and the quality of the Trunktracking between the two units before you go spend your $$$$. Is interesting reading and lets you understand they both TrunkTrack differently.

From: From: SIscanner
Topic: 2659 Message: 2659

Hi all I started a scanner site http://www.ScannerWay.8m.com and need more frequencies please send me anything I don't have so far.
I currently have frequencies that include:
Military (M.A.R.S.)
Family Radio Service
National Weather Service
Amateur Radio
Citizen Band
Rail Roads
VHF Marine
G.M.R.S.
D.E.A.
F.B.I.
Prisions
A.T.F.
Uniteds States Marshals
Television Audio
Fast Food Places
Dot/Star frequencies

I take it that you are talking about the Pro-94? I bought one a few weeks ago and i love it. Only thing i am not too fond about is that it only does trunking. It wont do conventional at the same time. But monitors a lot of trunked systems at one time. So its a great scanner!

Eric

From: RadioMitch@webtv.net
Topic: 2650 Message: 2661

The antenna was made by Hustler Electronics and was designed for the 2 meter and 220 and 440 MHZ amatuer radio Band. It consisted of a 1/4 wave antenna (you could actually transmit on that section alone with no gain if you wanted to) followed by a "phasing coil" and an additional 5/8 wave at the top of the antenna. Its bandwidth was somewhere in the vicinity of around 4 or 5 mhz and was an excellent antenna. Try Stuart Electronics in Flushing, NY, Barry Electronics but I don't know whether they make one for the CB band if they do it will be pretty big!

Hey gang......

This may be the wrong list for this request, but let me try.

With all the talent on this list, there must be someone
who has frequencies for Puntarenas (Costa Rica), and
Cozumel (Mexico), yes?
If not, can anyone point me in the right direction, please?
I would certainly appreciate you posting them here, or to me
privately.
Thanks......Joe

2663. [SST] WWW Form Submission

Below is the result of your feedback form. It was submitted by () on
Wednesday, February 9, 19100 at 15:08:38

What: cell phone calls
frequency: 850-920
body: get yourself an old rotary dial television set.
Set it to UHF channel 80-82. The screen goes blank, but
you can listen to transmissions. Adjust the tuning ring located on the
Uhf channel selector to fine tune the incoming transmission.
It's a TV/scanner in-one. What more do you want.

Who: David A. Span or Disco Dave

2665. [SST] MDT program

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-10 07:43:45 UTC
From: Jeremy
Topic: 2665 Message: 2665

I got a new computer, and lost the program that decodes MDT data.
Can anyone give me the address? I saw it posted once before.

Also, will i need any mods to my scanner? or just plug the cable from the speaker output into the computer line in?

Thanks

2666. [SST] Jobs?

Topic: 2670 Message: 2670

Ohio has no law about a scanner in your car. Kentucky does! HAMS ARE EXEMPT
(good reason to invest a little time into getting your Ham License - even a
no-code Tech Class license)

From: mcgovern design
Topic: 293 Message: 2675

I tried this w/ my old Sharp Linytron, for curiosity's sake. I think I heard what were phone voices, but it was difficult to make any sense of it through the static.

And as for eavesdropping on phone conversations in general, whether it's legal or not, I find it downright boring. I've listened to cordless phones, aircraft, police, fire, EMS, business, etc., and other people's phone conversations are by far the most boring. If you enjoy it, I'd never judge you. It's just not such a thrill for me. :)

2682. [SST] Michigan Scanner laws?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-11 21:21:15 UTC
From: Andrew Koch
Topic: 2682 Message: 2682

My friend and I often go to Michigan for day trips... he stated that it is not legal to have a scanner in the car at all, and that the MSP will confiscate it if we are pulled over...

I want to know if this is true or not... I am from, and my car is licensed in, Pennsylvania, where I am also a Volunteer Firefighter.

From: JasonHouch@aol.com
Topic: 2676 Message: 2690

Well dream job or not.......there are many types of businesses that have need for information gathered from police/fire calls. Some examples are towing companies, building/contents restoration contractors, personal injury lawyers, etc. I head up our radio operations in which we have a staff that monitors 16 scanners 24 hours/7 days for a specific type of incident. You just need to be creative and think of businesses that can use specific info that can be culled from listening to scanners. Then approach the decision maker at that company and you might find yourself in a dream job and everbody calling you superman for turning their lead process into a very successful venture! Good Luck!

newspapers and tv and radio stations also have people that monitor police and fire.

2693. [SST] Trunked System

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-13 04:20:10 UTC
From: Robby Workman
Topic: 2693 Message: 2693

This may sound like an odd question, but does anyone know how to determine who use which group of frequencies in a trunked system? Here is the situation:
A particular law enforcement agency in my area uses the Southern Linc system as their primary means of communication; Southern Linc was originally devised as a common link for all Southern Company utilities (MS Power, AL Power, etc.), but they also "sell" use of the system to private individuals, companies, government agencies, and whomever else desires to use it. I checked the FCC site, and I think I know all the repeater frequencies on this area's towers, but now I'm at a standstill. I have a wonderful trunk-tracking scanner, but up until now, I have had no use for it. If anyone can help, or if you need some more information, you may either post to the list or email directly to me (robw810 at yahoo.com).
Thanks RW

radar detectors are pretty much OK.. you do not hear of truckers being pulled over and ticketed for having a radar detector. the problem with having one arises when you get caught speeding or having an accident caused by speed... check the DOT in the states you are going to be working. Just call the highway patrol number and ask the person that answers. In OHIO, it is most likely going to be a trooper than answers.

DEFINE "scrambler". Scramble WHAT? Eggs? Radio? Phone? brains after 32 hours of non stop driving?

Negatory EarthMan on the radar detector in a class anything that requires a CDL. Anything that requires a CDL IS a commercial
vehicle and radar detectors are definitely prohibited. Now the scrambler I don't have a clue about, but from my end of the radar
gun, I've never seen one that worked.

Tim.

From: COPNEWS@aol.com
Topic: 2687 Message: 2704

Michigan has some of the most ridiculous laws on scanners. You can have a portable in the car if it is not connected to a power supply and external antenna....
If it is mounted and on car power it must have a permit..... I know this is dumb I am just passing it along. In order to get a permit you have to state a good reason to need a mobile scanner and then you are supposed to list all the frequencies that you want to hear (really)? The real killer is that say you want to hear everything the police do in your local county. You are supposed to get a letter from the sheriff that it is OK.
This law was written many years ago before the invention of the scanner radio when all you had were huge trunk mount units that got maybe two or three channels at best. Police officers and fore fighters are ex exempt as are Amateur radio operators.

I have experience with this si since I was arrested back in 1988 while passing thru Schoolcraft Michigan. Al though the van was owned by WMAQ radio in Chicago and was a legitimate news unit < the radios were yanked out and I was handcuffed.
I later got the radio back cause I was a ham operator as well as a newsman but it shows you how silly some of the cops are over there.

Attempts to repeal the law have met with hard times

2705. [SST] Re: question about the laws

Topic: 2706 Message: 2706

You know, it is so simple to get a Ham Radio License these days, I mean, a SIMPLE (so simple that ANY kid can pass it), exam that you can buy the exact questions and answers at any Radio Shack. A Ham Radio License is all you need to be EXEMPT from scanner laws in all 50 states. No more worrying if you can or cannot have a scanner in your car, is it plugged in, is there a matching power connector? will the scanner cops steal (err, confiscate) it? For the simple cost of "working" for a Ham License, you will have peace of mind... besides, with a license, you can actually TALK on VHF and UHF to other Hams. The Technician Class license does not require morse code either! How simple can that be?
Want more info, check out www.arrl.org for classes/exams near you.

True. But I do know of hams who have been hassled over mobile and even portable
scanners by clueless cops. (As some certainly are) Another problem for hams
nowdays is their handhelds. Hams have been blamed for all the burping and
farting
and other stuff that is going on with certain police departments and I also
know
guys who have had their HT's taken from them for "investigation" in cities
where
that is a problem.

From: Bob
Topic: 2706 Message: 2711

This may be true, but the cop on the beat will have to answer to the chief or county/city officials if he is out of line. After the Y2K Non-Event, almost every county/state agency knows about Ham Radio and one phone call would most likely clear up any "misunderstanding" . As for the few morons that play games with HT's and freqs not in band, the FCC is catching them. It is so easy to catch a problem these days! Any Ham that abuses laws is not a real Ham and deserves anything that happens.

A true story, in 1978 or so, I was cruising south on I-75 at a high rate of speed, well, OK, I was going almost 70 in a 55. The Kentucky trooper saw all the antennas on the car and after he gave me a ticket, asked if I had a radio that could listen to the police. My answer was SURE, Do you want to see it?
His eyes lit up and followed me to my car. I picked up the mic and asked for the local posts phone number. I was going to autopatch them. He said never mind and walked away. It was worth the price of the ticket for the belly laugh I got.

Bob

Topic: 2687 Message: 2712

Section 1. Section 508 of Act No. 328 of the Public Acts of 1931, being section 750.508 of the Michigan Compiled Laws, is amended to read as follows.

Sec. 508. (1) Any person who shall equip a vehicle with a radio receiving set that will receive signals sent on frequencies assigned by the federal communications commission of the United States of America for police purposes, or use the same in this state, unless such vehicle is used or owned by a peace officer, or a bona fide amateur radio operator holding a technician, general, advanced, or extra class amateur license issued by the federal communications commission, without first securing a permit to do so from the director of the department of state police upon such application as he or she may prescribe, shall be guilty of a misdemeanor, punishable by imprisonment in the county jail for not more than 1 year, or by a fine of not more than $500.00, or by both fine and imprisonment in the discretion of the court.

(2) This section shall not be construed as restricting the use of radar detectors.

Why should you have to get a ham license just to listen to a police
scanner!!!!

Maybe we should get a license to listen to the radio or watch TV this
is the UNITED STATES

we should work to remove all restriction to the scanner radio hobbie

Dave....

Best thing to do is NOT to use an HT that has had the MARS/CAP mods made to it unless you are authorized to have them.

Yea, uh-hu, and alrighty then!
Think about it, the really really good surveillence stuff is very illegal.
Answering a question like that would open up at least Federal level
monitering of one's life for at least a year, if its not happening already.
This internet is literally swarming with ears.
Try buying something real extreme, then you will get the picture.
Good Luck, (word of mouth is better).

First I'll point out that this is primarily addressed to those with ham radios in their vehicles. And to expand on this a little, most ham HTs have the capability of being modified to transmit in the public service bands. Unless the owner holds the proper credentials to have such mods made, they could be in even more trouble should the "clueless" cop decide to take them in. If the mod is discovered, then they may get charged instead of released. This could be the case in any state. So I highly recommend that the mods not be made unless you are certified to have them.

Tim

you are right on that Iam a treasure hunter (with a metal detector)
you should see all of the rules and regs

for that hobbies!!! I was going to Canada to do some treasure hunting
and asked the custom people

what time of rules they had for treasure hunting they looked at me kinda
funny and said " what are rules we don't have any except don't go on private
property

In the US we are slowley losing are rights that we used have and we should
stand up for those rights!!!

DAve....

Sorry, too many liberals in Congress. If we had a piece of legislation up to remove scanner restrictions, someone would commit a heinous crime, then use a scanner in a car to evade police. Bam! Legislation killed. Media hype and "convenient" crime keep restrictions in place and always stronger.

Handheld or base? Either way, it's not even a scanner, it's a "communications receiver", and a good one from Icom or Sony retails for about $4K. AOR is a good bet for handheld. Check the websites.

2723. [SST] weird scanner problem

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-16 23:36:42 UTC
From: Scott Johnson
Topic: 2723 Message: 2723

I have a scanner problem that may have an easy solution, but
I have not been able to figure it out yet.

I have two scanners:
1. Bearcat Sportcat walkie-talkie w/ 800 mhz band
2. Realistic Pro-2005, full cell coverage

I have for a long time been able to receive cell calls on
my Sportcat. It is supposed to be cell blocked, but they
still come in (example frequency: 902.4875).

Here is the problem: I can have the Sportcat tuned into
a cell call in progress, using the rubber duckie antenna
with clear reception. Then, when I tune the Pro-2005 to
the same frequency, with the ROOFTOP antenna, it receives
nothing!

I can search with the Pro-2005 and find cell calls so I
know it does receive okay. I don't know why this scanner,
which is better, would not receive transmissions on the
same frequency as the smaller one with the smaller
antenna.

Anyone have any ideas?

Scott

Hey,
I have been looking at the scanner tricks page and I dont see where I can post a question for others to answer.
May question has to do with modifications to 2 Uniden Bearcat Scanners I have.
Since obviously you were able to mail to "the list" can you help me out?
Thanks

Agreed! we have far too many "rules" in what used to be a FREE country, I mean, at least we aint the Brits where you (used?) to need a TV license.

What I'm saying, is if you really want to have a scanner in your car, you do not want a battle with the scanner cops, and you do not have the time or money to fight "city hall", life is made simpler by getting a Ham License

From: Cap133@aol.com
Topic: 2727 Message: 2727

Hi All:
I was wondering if anyone out there had any opinions on the Radio Shack All Band Glass Mounted Mobile Scanner Antenna.

I live in an apartment and was considering mounting this antenna to my sliding glass door so I can get better signals. The antenna I currently have is the $10 Radio Shack indoor antenna. I think that the apartment is interfering with the signals and thought that an "outdoor" antenna might be a little better. Any thoughts? Thanks.

Topic: 2728 Message: 2728

There can be several reasons why you can receive on one scanner vs the other.
First, 902 - 928 is a shared band and not cell phones.

Ok, now the answers, I hope.
What is the sensitivity of the scanners in question? The sensitivity is measured in microvolts and a good VHF/UHF receiver should be .5 uV or better.
What frequency are you listening for? Is the antenna cut for that freq?
Something that is not mentioned a lot, what is the IF of each scanner? It is possible for one scanner to interfer with the second. If the image of one is stronger than the desired receive signal, then you will de-sensitize the second scanner.

I am not a "scanner" listener, I use my ham gear to listen to freqs outside the ham bands. 20 years ago when I worked at a factory/importer service center, it was my impression that portable, hand held, radios were more sensitive than fixed stations because the needed to overcome small non-reasonant antennas, where the fixed station was more selective... ie, better filters, front end etc.

Measure the antenna is one way to know what it is cut for. Another is to read the manufacturers label if it still has one. Then you could also use a neat toy like the MFJ 259 anyalizer.

Open connections inside the radom (if it is fiberglass covered) will prevent receiving bands.

Pre-amp or an active antenna will help it receive better.

Bob

From: Jack Ricci
Topic: 2728 Message: 2740

Scott,
When I was new to the hobbie of scanning and trying/trading scanners to see what each would do so I could settle on owning all the right ones, I found this same phenomenon you are experiencig and no one would or could explain my particular situation. I had to figure it out myself. I travel a lot in two counties in Southwestern Ontario, Canada.(Essex and Kent Counties)
They are a hotbed of communication activity. We can also scan the state of Ohio and especially Michigan because we are within 40 miles of either.
(We are on the north shore of Lake Erie and therefore surrounded by Michigan and Ohio).
When I was in my home town of Leamington, I would program my 200 channel scanner with all the frequencies I could hear cell phone calls on in Leamington. The frequencies I plugged in did not coincide with the published cell phone frequencies. That was the first mystery.
When I did a service call in Windsor, Ontario, (across the Detroit River from Detroit, Michigan), I figured I would be blown away with cell activity fromWindsor and Detroit so I would park the van and listen. I found the exact opposite! Not only was there a lot less cell activity coming in on the frequencies I had programmed in Leamington, but I was hearing utility and public works calls from Detroit on the same frequencies!
I figured it couldn"t be that there were no cell phones in this area and it couldn"t be that the Michigan public works people were licensed to talk on the cell frequencies which are reserved for cell only!
It turned out that I did a search for cell calls in the area within the frequency range my scanner was hearing cell calls on in my home town, and suddenly I was overwhelmed by cell activity but on different frequencies within the same range that I would hear them on in Leamington.
I learned that cell towers in neighbouring towns don"t use identical frequency coverage in order to avoid interference from nearby cell activity and that only some frequencies overlap from cell site to cell site.
But most of all , I learned that I was actually listening to frequency images on my scanner , the true cell frequencies were about 21.4 mhz above the frequency that I had punched in my scanner----- That"s why I heard public works seemingly on the cell frequencies, that"s why I couldn"t hear Windsor cell calls on the phony Leamington cell frequencies. If they had been the real cell frequencies, I would be able to hear something on the cell band anywhere in the world, but I was only hearing nearby cell sites on the wrong frequencies-image frequencies!----------

2748. [SST] Re: Radio Shack Glass Mount Scanner Antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-17 19:05:19 UTC
From: brown82@MARSHALL.EDU
Topic: 2727 Message: 2748

That scanner antenna is crap. I know from personal experience and from many others. The antenna doesn't even touch your radio! Try this: walk outside with a TV antenna but DON'T hook it to your TV. Did it improve reception? The "through the glass" antenna TRIES to tranfer signal through the glass by using 2 transformers, but putting any 2 transformers so far away (relative to their size) will result in a very low efficiency of signal transfer.

This is the question that you need to ask yourself: what is the house made of? if it is wood, an indoor antenna will do almost as well. If it's brick or has metal siding, ANY outdoor antenna will harvest great gains.

Don't fall for the "through the glass" trick. It's a waste of money. Just buy 20 ft of coax and put an antenna on the roof or anywhere outside.

the best antenna is one that is magnetic or one that is metal touching metal. you wil lose a good portion of reception with the glass mount.

just experiment and you will see.

From: RadioMitch@webtv.net
Topic: 2738 Message: 2754

You have to measure the antenna with a tape measure. Every antenna has a resonant frequency for the most efficient transfer of power from the transmitter to antenna. You must include all metal parts of the antenna including springs, balls at the end of the antenna, and washers and clips. There is a formula 300 divided by the frequency in megahertz, so if the frequency is 50 mhz, you take 300 divided by 50 which is 6 which is in meters for a full wave antenna, multiply by 3.28 to get the length in feet, divide by 4 to get a 1/4 wave then take 95% of that to get the electrical length, then you have to measure the antenna to that length, which will give you a ball park length, then tune it down with a simple VSWR bridge. Thats the way you do it, if anyone else tells you otherwise, don't listen to them, that is the simplest way to do it, its simple effective and it works, take it from a HAM AND COMMERCIAL OPERATOR!

2755. [SST] Re: antennas

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-18 04:27:37 UTC
From: Bob
Topic: 2738 Message: 2755

Yes, measure the antenna. The length of the antenna will tell you its resonant frequency... for example. if the antenna is 18 - 19 inches, then it is cut for about 150 MHz, if it is 54 inches, it is cut for about 50 MHz. The formula is 468/f = 1/4wave in inches. I am not talking about loaded or helical (rubber duck) antennas.
The MFJ 259 is a device to measure the resonant frequency. You connect the antenna feedline to the device and you can see the SWR on the meter. It only covers up to 170MHz but I think that AEA makes one to go to 70cm (the Ham UHF band).
I would suggest that you purchase (or look in your county library) a copy of the ARRL Handbook or a great book by Bob Shrader called Electronic Communication.

From: RadioMitch@webtv.net
Topic: 2738 Message: 2756

Pre-amps will help if you live in a low intermod and low rf pollution area, since you will only increase noise and intereferнce as you amplify the signal you want to receive. A pre-amp is only as good as the design of it. Some pre-amps may even hinder reception, while others may help on some signals, filtering out unwanted signals and other bands. Also note that you could possibly overload the front end of your radio, especially if you have a sensitive FET front end which may be all you need. Sometimes looking for perfection elsewhere is just as bad, especially when it was in your backyard to begin with! Take it from one who use to work at intermod central, the Empire State Building.

Another thing concerning glass mounts: If you try to mount it on a sliding glass patio door, most of them are DOUBLE PANED to cut down on heat loss, ergo even less if any gain.

I'v e had my Pro-39 for over 6 1/2 years, and it's a great scanner in my book. Had an Energizer battery upchuck it's contents in '98, so I had it re-built by Radio Shack-they did a great job too. My fault, as I laid the scanner on it's side with depleted batteries in it. Now, I use the Radio Shack Nickel-metal-hydride batteries in it-they take forever to recharge using the charging circut in the scanner, but last quite longer than ni-cad batteries, and you can recharge them anytime without the memory problems that ni-cad's have.. My scanner has a code on it like this: 8 A2. The 8 might be the month, the "A" could be taken as built on the first shift, and the 2 is definately the year it was built(1992). As far as modifying to receive cellular phones, nothing needs to be done. The pro-39 receives from 851 thru 868.9375 Mhz, and there's lots of cellular sites in that frequency range in my area, so no modification is necessary.
Hope this helps....
Brian

PRO-39 takes a cell mod. Don't know why you'd want to, except to restore full range. Art-Sci publishers puts out a scanner mod/CB mod book set, updated every year. Radio City in Minnesota carries them. 1-800-426-2891. Ask for Maline...she knows the books better than anyone. Tell her n0zkg sent you.

The pro 2040 is an excelent scanner for any one who
has alot of frequencies to monitor. I am very pleased
with my pro 2040 and will never sell it. I especially
like the data skip feature and hypersearch.. I would
highly
recomend that scanner, you will be glad you purchased
it..

sir,

a HAM license is the same as an Ametuar radio license.
you can find study books at any radio store or online.

Ametuar radio (HAM radio) is worldwide communications.

hope this helps.

I like my Pro 46 very much. You can scan between 2 freqs with it, plug in 100 freqs & scan them.

I wish I could interface it with my PC to program channels.

When the battery's get low, there is an annoying beep letting you know, every few seconds.

When you have the EARPLUG in, the annoying is DEVASTATING.

Anybody know how to defeat that beep?

Hello to everyone on the group. Is there any one from the connecticut area that could help out in finding the match pair of the frequency (42.580). When I scan this frequency, all I hear is one side of the communication. I also try using the trunked system with no luck on that. Could someone please post these frequencies. The area I would like to monitor on the I-95 is from the town GREENWICH all the way up to WESTPORT on I-95.
THANKS,
RAY

Everybody thinks these antennas suck. I don't see why RadioShaft doesn't just discontinue CRAP like that. Instead, they dicontinue much needed parts and great equipment. That's why they're RadioSHAFT. You can sure tell that RadioShaft doesn't have people with REAL RADIO KNOWLEDGE making the decisions.

The Connecticut State Police is in the process of changing over to a "digital" 800+ frequency. For a short period of time (during the transition) the Troops (base) are broadcasting on the former low band as well as the new 800 band. The vehicles DO NOT transmit on the low band. Just the high one, which being digital, you cannot pick up.

We in the radio news biz have found that glass mount antennas as a whole are a sort of weird animal. We all know they were created to make cellular more acceptable for the big shots who were first to use it. It was hard to sell cellular in the beginning when you told the car owner big shot that a hole had to be drilled in his Benz! Glass antennas really have never had a good spot in professional communications. there are too many factors that can make them less than the best. The makeup of the glass has a lot to do with it. Newer expensive windshields are leaded and that kills signal. Defroster wires and even the Ford built in AM FM antennas system which is IN window can affect rear mounts.

If you were to sweep a glass mount antenna you would see that the receive goes way up and down depending on the FREQ and the way it is mounted. A glass mount can never be as good as a thru the roof quarter wave or multiband. No matter who makes it be it radio shank or the big boys like antenna specialists its a compromise at best.

Want to do it right? Drill a hole and put in a multiband whip.A/S makes the best ones out that don't cost an arm or a leg. If money is no problem then buy an AUSTIN ($90).

But the truth is that in metro and most suburban areas the best thing is the all around workhorse 17 inch whip. Unless you have a lot of low band traffic.

I can listen to cell calls with my pro-51. I hear them in the 800-900 channels.(please nobody tell me its cordless cause you can tell the difference,) also I bought my scanner used for $35 it has a couple of odd frequencies already on it.I have heard that there is a key trick for the ones made before 94 but mine was made in 96.The channels I have (the odd ones) are,318.030,608.660,63.600 when I put it in direct search I can go through all the 300's 600-500's,& 60-70's, Howe come they are there& how can I save any of the other ones that I am not supposed to have? Also did I get a good deal?I am not familiar with Radio shack brands I used to have a Bear cat I could hear Cells on that too!(like i said I know theyre cells cause I have heard people say I am on my cell, & they will be driving around) HELP Me figure out exactly what I have and how I can get the best use out of it.

I had a similar annoying beep in a short wave radio. Here's what to do: open the radio up and follow the leads from the speaker into the audio circuit. If you notice another input from a place other than the discriminator output, that is probably your culprit. Just slice that lead with a razorblade (if that's not it, you can always scratch it and resolder it).

I have a pro-90 that picks up cellular intermod in the 42Mhz range, if the stuff sounds like cellular. What does it sound like? Are they police? Lots of State police and highway patrol use this range. It is usually half-duplex, so you may only be hearing the powerful dispatch tower and miss out on all the mobile units.

Does the apartment have cable TV ... you would be surprised that you can get some decent signal off the cable since the cable system generally has some shielding faults somewhere between you and the building or neighborhood distribution amplifiers. As far as putting an on glass antenna on the patio door, that is not smart. Better to tape a 20 inch piece of wire to teh glass and attach that to the coax. Another hint. If your apartment has a patio door that has an ungrounded frame on teh door drill a very tiny hole in the metal frame and put a very small sheet metal screw in it then attach to coax.... You could be surprised...

Brian,
Those are not the proper cell phone frequencies. I had a similar
Radio Shack product in Canada about 8 years ago and was happy to hear all
the analog cell activity that was spawning at the time on those frequencies
on the Radio Shack portable scanner, but it turned out they were only image
frequencies, which was acceptable to me at the time, but actually meant I
had a lousy scanner that wouldn"t reject the stuff on the wrong
frequencies, so I got me some better scanners whose front end did the right
job. What's the difference to a listener? I found that image frequencies
would only let me hear local cell activity with either a portable whip or
tower mounted omnidirectional antenna, whereas a true scanner which allows
true scanning on real cell frequencies woul allow me to listen to a lot more
cell calls from cities 40 miles away when I used the tower mounted
omnidirectional about 45 feet up!
Jack

2786. [SST] Re: [MODS]

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-20 04:32:25 UTC
From: Jack Ricci
Topic: 2765 Message: 2786

Any mods I made in the past to Radio Shack scanners, whether they were base or portable, were to restore the cell band and usually required only the removal of a certain diode that was inserted to block those frequencies when law makers started to force manufacturers to comply with new bans on listening to cell phones. It is my belief that these same manufacturers did not want to lose a portion of the market that liked to listen to cell calls, so they built sloppy scanners which allowed local cell activity to be heard on an image frequency instead of the true cell frequency so that they could make both lawmakers and cell listeners happy until the lawmakers clamped down further and forced certain states and certain countries not to produce any type of equipment that could listen to cell. When I modified and restored cell bands to Radio Shack scanners, I found that there was a definite advantage even if you could already hear cell activity on an image frequency. The images were only local calls on local cell sites. The restored cell band on a good outdoor antenna would allow you to hear cell calls from distant cities up to 40 miles away! It did seem redundant at first because on the same scanner, I was able to hear cell calls from roughly 850-870 mhz on the images, and hear the same calls on 870-890 mhz (roughly), after restoring the true cell frequencies.But on an outdoor tower-mounted omnidirectional, I was able to hear stuff on the true cell frequencies which I was not able to listen to on the image frequencies!

SCPC-FDM LIST.

Discussion of SCPC and FDM(SAT DX) The purpose of this list is to
provide a forum for satellite communications (scanner) hobbyists
interested in SCPC,FDM and similar modes of reception.

Including Inmarsat,FltSatcom,Meteorsat and similar.
Dicussion of antenna design and equipment,decoding techniques etc.

Any information shared on this list is for experimental and educational
purposes only.

come and join in on the chat!

URL: http://www.onelist.com/group/SCPC-FDM

we have over 500 members worldwide.

Thanks.

A HAM license is a permit from the United States Federal Communications Commission that permits a citizen of the United States to transmit on amateur radio frequencies while on US soil. I don't know about British radio laws, but they probably have something similar.

On Fri, 18 Feb 2000, carl's e-mail wrote:

Jack,

Now, you have my curiousity peacked.
What are the actual cell phone frequencies?
Now, that I think of it, on approximately 855Mhz, I also get the Oceano Dunes Park Ranger frequency-always wondered why they were on the same frequency area as the "cell phone" range, without getting any interference like I do.
I've checked the 900 Mhz range with my cordless Phone at home, that seems to be accurate.

Brian

About the 42.000mhz police range in the Connecticut area, also know that California's CHP use this range for statewide coverage. It is duplex as it probably is in Connecticut as well. There is no set distance between the base and mobile freq though. You will need to scan the range hope a mobile unit is close enough for you to determine the "paired-mobile-freq" to the base freq. Until you get lucky doing that it would be best to find a freq list somewhere. Good luck.

Subject: [SST] Re: Connecticut state frequencies;

I have a pro-90 that picks up cellular intermod in the 42Mhz range, if the stuff sounds like cellular. What does it sound like? Are they police? Lots of State police and highway patrol use this range. It is usually half-duplex, so you may only be hearing the powerful dispatch tower and miss out on all the mobile units.

Well, we have over 1100 members on the list now. Not bad for about a year.

Many of you may be new to e-mail lists like this, others old pros. But here are a few tips for everyone to help keep the quality up and the bandwidth down around here.

First off, everyone should visit:
http://www.eGroups.com/list/stupidscannertricks
at least once to see what all there is to offer. You may have to sign up once to get a password - be sure to use the e-mail address that you are getting this list on, or it may not see you as a subscriber at the egroups website.

The above site will let you chose very cool options - digests modes or "read on the web" mode. This way you don't get 20 messages into your mailbox each day, but can still read the list messages in whole or in part. My favorite is the full digest - all the days messages get put into one e-mail and sent to you.

You can also - God forbid - unsubscribe from the list at the website. Plus there is a chat room, message archives to read/search past messages for questions that may have already been answered, and a new database feature that I haven't really messed with yet.

As for the messages, try to keep the length down a bit by only quoting the relevant parts of a message before or after your comments. Nobody likes scrolling down to the bottom of a long series of messages that were quoted only to see someones one line comment. Plus some people get charged by the K of data transfer or have a mailbox size limit of less than a meg which may get overflowing with all the messages that are 90% quotes.

I am moderating all the posts to the list for only two reasons.

1) to weed out the remove requests before the bombbard the list.
2) to keep the list on a general topic and not a flame war or duplicate posts.

If you post a message you will get a little note to this effect. Don't sweat it - 95% of the messages get approved. If you are cursing out someone or spamming the list with remove requests it will be rejected. Other than that I don't really care what you folks talk about as long as its civil. It's OK to stray off topic now and again on this list. It helps us get to know each other a bit. If it goes too far I'll let you know or just not let it through (or people will start complaining or unsubscribing).

If you'd like to tell your friends about us, you can send them to our website at http://www.stupidscannertricks.com where there is information on all of our groups; or just send them our special e-mail address just for subscribing - stupidscannertricks-subscribe @egroups.com (remove the space)

Thanks!

Rich Barron

Try scanning the frequencies between 896.0125 to
920.000 MHz, for any cell activity. those are TRUE
image frequencies that you will be able to use if your
scanner has DUAL CONVERSION. If yours has TRIPLE
CONVERSION, it will not work.. Also as far as codes
go, I don't know of any sites. Try any search engine
and type in "Codes for ----- Police"

Hope this helps..

Brian,
In Canada, our major cell companies are Cantel (Roger's AT&T Wireless) and Bell Cellular. In CANSCAN's 1999, Windsor-Detroit , 4th Edition Publication, they list our two major cell companies as operating on cell site tower frequencies of roughly 869 mhz-894 mhz. This will probably be similar where you are because North America has borrowed some of the upper UHF TV channel frequencies and assigned them universally as cell phone frequencies to make way for the then-new technology. That is why you can use an older 83-channel TV to roughly tune in cell phone calls above channel 80! I can use my cell phone where you are and you can use yours here, and we can both use full coverage scanners to listen to each other if we're within reach! You will find that most North American cell sites use the same frequency coverage.
It's the tower frequencies you want to monitor because they travel much longer distances to maintain phone contact with the cell users and therefore can be received by a good scanner on the proper frequencies from quite a distance-like 40 miles with an outside antenna-15 miles with a good portable whip antenna.
A less desirable scanner with a sloppy front end will allow you to hear intermod or cross-modulation or cross-talk interference on the wrong frequencies, giving the appearance that your scanner picks up proper cell frequencies, but they are only interference being overheard on the wrong frequencies on your particular scanner. That's why you hear the Park Rangers on your 855 mhz as well as interfering cell calls seemingly on the same frequency! The Rangers don't hear that cell interference on their radios! - only you do! This is called monitoring on an "image frequency ". This is not bad though, for you anyway, considering you can listen to some cell activity if you want to without spending the bigger dollars for a better scanner. However, if you're one of the park rangers and you wanted to keep tabs on daily park activity with that scanner, you would be annoyed with how poorly it performs on your "park " frequency!
Monitoring cell towers on scanners that produce "image frequencies " does not allow you to listen to distant cell calls-only the very local towers have a strong enough signal to interfere with your particular scanner and bleed through on the wrong frequencies!
The cell phones themselves operate on a lower frequency than the towers do, and they are much harder to hear on a scanner because they only transmit a lowly 600 milliwatts in most cases. So if you hear some sort of cell call within 820-845mhz, it's not your imagination, because individual cell phones do operate on those frequencies, but get rebroadcast on the cell site towers on the assigned cell site frequencies which are higher and stronger.
The moral of the story.....if you enjoy listening to cell calls and you want to listen to more , and from further away, get yourself a real scanner, or modify the one you have if it's an easy mod. You will still

overhear the intermod , interfering cell calls on the wrong frequencies on
your particular scanner, Brian, but you will also hear the more distant cell
calls on the "right" cell frequencies.
Hope this fable helped-- it came from lot's of experience and use
of different equipment through the years.
Jack

Dear sir,

Try radio Shack, Bearcat or any other stores that sell
scanners. The scanner you want will have to cover 800
MHz frequencies. Most scanners now have 800 MHz
coverage because the 800 MHz trunked system use is
more wide spread. If you look at the box that the
scanner comes in, It will usualy tell you the
frequency range, If not just "800 MHz Coverage". The
```

box should have that specification on it. Try this
website for starters..

www.uniden.com

This is the site for Bearcat scanners.

Hope this helps.

Dear Jerry,

Look in the phone book for any privatly owned radio
shops and call them.. Another way is to ask a ham
operator if you know one, and see what they can do.

Thats all I can come up with.

Pete

2815. [SST] Non Scanner Question (Crystals)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-24 01:23:14 UTC
From: brown82@marshall.edu
Topic: 2811 Message: 2815

This is the time to become a frugal experimentalist. Just unscrew the back of the radio and look at the crystals. Buy the proper frequency crystal and replace the old one. It's even simpler than installing a light bulb because there are no threads (the crystals just plug in, and there's no backwards). If you fail miserably, the only damage you will do is forget what socket to plug the new crystal into. In that worst case senario, it won't cost any more than it did before if you want a pro to bail you out. That is true unless the radio is digital, in which case the frequencies are programmed without crystals.

You mean a scanner that will demodulate digital speech? Laws are in the works as a preemptive strike against any possibility of digital scanners. They sure would be nice. You could listen to PCS phones, digital cordless phones, and the digital police you are talking about.

2817. [SST] Want Guam freq's and help

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-24 07:54:37 UTC
From: Matthew Middlebrooke
Topic: 2817 Message: 2817

Does anybody have a list of guam frequencies? I'm especially looking for fire, medical, police,and military frequencies. Also does anybody know the IF frequency for the Bearcat 140(BC140)? It's a 1986 model.
One more thing I would like some instructions for a homemade antenna that would cover between 20MHz-530MHz
Any help will be of great service.

Matthew

2818. [SST] 900Mhz Phones and Cell Phones

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-24 18:31:31 UTC
From: Mark R.
Topic: 2818 Message: 2818

About two or more times I have seen 900Mhz freqs incorrectly mentioned as
cell phones, or cell phone images.
896-920Mhz are 900Mhz cordless phones, I have picked up a neighbor's phone
in the 896Mhz range.
Cell phones are in the scanner-blocked 800Mhz range, and you will sometimes
get images in other freqs.
The Icom R2 I had, picked up several cell images in the 490-520Mhz range,
thats a rough rememberance of what exact freqs, but thats where alot
appeared.
Hope everyone has a great weekend.

Mark,
Admittedly I am new to this group and to scanners, so
I dont know I I should be asking you questions but at
worst I get no reply so here it goes. I tried some of
the Freqs for the tv stations and my scanner gives me
an error when I try to program any. Do they build
these scanner to block out certain Freqs? Of am I not
reading the right pages of my book. Any help you can
give me would be greatly appreciated.
Thanks
Todd

From: RREMT@aol.com
Topic: 2819 Message: 2820

Most scanners can only pick up certain frequency ranges. Check your manual to see what ranges your particular scanner can pick up. As far as I know, only the newer scanners can pick up the 800-900 MHz ranges. Also, in regards to the 800 MHz ranges, you would need a "Trank Tracker" scanner to pick up these ranges properly. I hope this answers your question.

Todd,
Yes your scanner is blocking out the TV station freqs. And that is not all that is blocked I'm sure. There are modifications (mods) that can be applied to the circuitry, but I am not qualified to help you with them. Others on the list can help you find these mods for you. However I simply suggest you sell what you have and get another one which suits your needs. I reccomend a Radio Shack radio, which I rarely do, but the Pro-2006 has served me well for years, and I can send you directions on how to modify it for cellular freqs. All it takes is removing 2 screws and use a toenail clipper to cut a diode.

Dear Mark,

Yes most scanners do block out those frequencies.. The
reason is really unknown, but also you would need a
scanner with "NarrowBand FM recieve" which is found on
many more expensive scanners, the same thing goes for
the frequency ranges.

what you could try though is tuning through the
frequency range of 470-512 MHZ. that range of
frequencies contains TV frequencies on them..

I would like to help out in any other way that I can.

If you have a question, Contact me

Pete at;

fenderbender911@...

Hope I could help.

Pete

2826. [SST] codes

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-02-23 23:28:47 UTC
From: LARRY HIDALGO
Topic: 2826 Message: 2826

This is unrelated, but I recently purchased a car with a Kenwood cd player installed and I can't figure out the code to make it work. I contacted the dealer and he said he purchased the car at an auction and couldn't help with the code.

Does any one know how to reset the code on a Kenwood CD player? I think the model is KDC-7011.

Thanks

lh

Try going to a car stereo shop. Talk to someone who installs car stereos. You could even try, Best Buy or Circuit City.

Most scanners will block out broadcast radio and TV stations among many other signals. You will want a scanner with "continous" coverage. That, for example, is 25Mhz-1300Mhz(1.3Ghz), and can extend these ranges. If your scanner stops its highest freq range at 956Mhz or so, I really doubt you could pickup TV audio. Not that it is out of range or of a higher Mhz, its just blocked out of your scanners coverage. I had a Pro-91 as my first scanner, and of course it had some blocked freqs, someday you will get a scanner with more coverage.

Pete, I understand if your response went to the wrong person, I own a Sony Wavehawk ICF-SC1PC.
It picks-up 25-1300Mhz with only cellular blocked, I had an Icom R2 but didn't like its ease-of-use, which didn't seem to be much, but the new owner and many are happy with its ease-of-use and how it operates.

What gets me right now, is I installed the software, and the Sony comes with the Percon freq database, so I use it and the Sony's programming software, take an 2 hours or longer, then get done, close Percon's software and it crashes Sony, and I didn't save it yet. So I have to go back and do it all again. At least the Percon software works, because at first it didn't want to load and would crash, so I had to tell Windows to "Ignore" it, and it would load.
I guess its better programming by hand with an Icom R2, but programming software really helps.

If you have an alphanumeric pager, go to www.incidentpage.net and sign up for this free service. When you sign up, you tell it what area you are in. Then, the service's dispatchers will send out calls over your pager. You will be able to "monitor" your scanner without even having it with you. It is really neat! I've been using it for about two weeks now and I love it. If you have any questions, feel free to e-mail me.

Thanks,
Corey Smith

Mark, Thats not entirely true, TV audio starts at 59.75-889. Go to the Stupid Scanner tricks website and click on "TV the hard way". (http://exo.com/~rbarron/same. html) (http://exo.com/~rbarron/same.html) They have a complete listing of the TV audio's freq.

Maybe one day there will be a legal unblocked scanner, but with the way it's going now, I just think there will be more blocks on the scanner, not less.

Good Luck!
Alex

well if most of the scanner owners who want to eliminate the problem of being limited to the few freqs most scanners cover eg;RADIO SHACK (YUK) then may i strongly suggest an AOR-8000 OR 8200.tHESE 2 SCANNERS DO EVERYTHING BUT YOUR LAUNDRY!!!the user manual is over 100 pages long..only thing i don't like is that there's no trunk tracking on them for 800mhz depts out there but that's a small price to pay for a scanner that goes to 2Ghz...

From my point of view as a firefighter, the digital systems are supposed to give up better communications, better inter-departmental cooperation and increase efficiency. However, my department has never had ANY problems with it's system, which though approaching 25 years old, is very reliable.

The new systems that they are talking about would rely on technology similar to cellular telephones. I For one don't want to loose signal when I go into a basement in a fire. With out current analog 33Mhz system, we can be as far as 10-15 feet *underground* and still be able to communicate with other units on scene.

I Know that my cell phone can't do this... in fact, I loose signal just going into my basement. Unless the placement of these transmitters is extremely dense, which most communities wouldn't care fore, or extremely powerful, which in a handheld device at 800 MHz isn't practical, than you will have the same general problems that Cellular Telephones and other 800-900 MHz systems have.

The City of Pittsburgh tried to set up an 800 MHz trucked public safety radio system, but only set up, I believe, 3 towers to cover the entire city.

This system is currently used for the public works department, as it was too unreliable for public safety use.

Why cant the government officials get it through there thick skulls that the newest isn't always the best!? It's the same mentality that makes thousands of people spend millions of dollars on computer upgrades that aren't necessary, and can sometimes lead in instability in there systems.

I for one vote that we use a more conventional system, such as 100 or 400 MHz Simplex, instead of trying to push the latest and greatest.

In real-world situations, when I'm in a fire, I want to KNOW that someone on the outside can hear me, even if I'm in a basement or if something happens to the remote transceiver.

I Hope that my rambling hasn't gone TOO far off topic :)

Just my $0.02

Hey group,

Just a heads up. i don't think it will affect
anyone on the list but i was infected with a
computer virus. Altho i'm not quite sure how it
spreads, everyone whose name was i my adrres book
got a copy. The funny thing is that people i
don't know and have never had any contact with
are also getting this from me. Just a warning,

DO NOT OPEN ANY ATTACHMENT TITLED
"PRETTYPARK.EXE"

noone on the list should be effected but if you
are, write me and i can send you the cure.

Sorry :(

Dear Group,

I am considering buying a scanner outside of the US (Javiation Company in the UK to be exact). I'd like to know anyone's experiences with this, such as, their scanners being confiscated, ect. Please tell me if you received your scanner with no problems.

Thank you very much

Hi David,
Thankyou for the information, regarding these new Digital Radio.
Could you please, keep us inform as when these units would be available.

I know Simaco have a top of the range one in stock in south OZ now...

But it's out of all of our price Range so waiting for a mid priced unit :)

Regards,

Will a radio company ever make a scanner that can receive digital signals?
Or are all of the digital systems encrypted?

Thanks,
Corey Smith

Hi Aiex,
I order my scanner (model # UBC-3000XLT) from Javiation Comp in the UK, receive it without no problem. The only extra fee that you are responsible for, is a customs fee of 15.00 dollars which is for export. I hope that answers your question.
P.S. All UK SCANNERS, HAVE NO RESTRICTIONS.

RAY

2871. [SST] What Local Frequency

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-04 16:23:36 UTC
From: Jerry Strahan
Topic: 2871 Message: 2871

Does anyone have any suggestions on to find out what public service agency operates on a certain freq. in my local area. I have written FCC with no answer.Tried old Radio Shack 1996 book.Maybe someone with a newer version can tell me.

Live In Louisiana By Ark boarder In Springhill,La 50 miles from Shreveport.

Freq. 155.265 & 154.98

Thanks
I know it is alot to ask but i really would like to know who is on this 1.I just can't figure this 1 out
Jerry

From: John Hanks
Topic: 2862 Message: 2872

I use this screensaver. It is not infected at all. This is just another rumor some moron started to try to make people like him. But, always use a virus scanner to avoid any problems. Take care all! JD

2873. [SST] Re: indoor antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-04 18:27:00 UTC
From: Thomas Billman
Topic: 2873 Message: 2873

yes really all you need is a piece of copper wire works great.or put an vhf or uhf car antena up in the attaic.copper wire works great i live down in the hole and when we get bad wind storms i plug the wire in the back of my scanner.this is also less visible to the land lord if you hide pretty good. antanas is one of my things i like to make.also if yo have kids that are little we all know that an antena that is seen is a mans night mare they like to touch. any other questions email me at thomasfromor@... be g lad to help you.

Below is the result of your feedback form. It was submitted by () on
Thursday, March 2 at 14:49:39

What: Broadcast remotes & cues
frequency: 161
body: Some radio stations use VHF (or UHF) for remote broadcasts and
contact with their staff. TV sometimes cues live shots this way.
Some frequencies to listen to are: 161.61 161.64 161.67 161.70 and
161.73. Just don't take that "doctored" 2m transceiver and step on the
remotes, please. As a courtesy. ;o)

Check out www.perconcorp.com and you can list frequencies in a town,
state, or county I believe.

That's not a customs charge, that's a smuggling charge. If customs sees one of these scanners, they immediately confiscate them and they may charge the addressee with attempting to import contraband. The risk is yours, please be aware of that.

2878. [SST] frequency counter

Hello everyone.I would appreciate some help here.I just purchased a radio shack frequency counter.I used it to get my 900mhz analog cordless phone frequncy fine also used it on a pair of F.S.radios it works fine yet how come when I try to check the frequency of my digital Nokia cell phone it does not register? Is it because the phone is digital? Thanks

SO MANY OPTIONS!!
You could make a dipole and put it in the attic, you could make an antenna to put it in or under the gutter, or you could put up a fake antenna inside a "roof vent"... or you could do like a buddy that owns a lock smith business. He could not put up an antenna to allow his wife to talk to him or be able to call/monitor his trucks in the field. He built a simple J-pole and put it inside a piece of PVC, then painted the PVC to match his brick work... instant "non-antenna"!

It depends. I'm guessing that you have a Nokia 2190 or 2150 (GSM or Sprint) in either case, the frequency is out of range. GSM (In the USA) runs at 1.9 GHz and Sprint (I believe) is either 1.8 GHz or 1.9 GHz also.

Andrew Koch
http://g3.dynip.com

DOS Computers manufactured by companies such as IBM, Compaq, Tandy, and millions of others are by far the most popular, with about 70 million machines in use worldwide.
Macintosh fans, on the other hand, may note that cockroaches are far more numerous than humans, and that numbers alone do not denote a higher life form.

No, it is because your cell phone is using multiple channels and the freq
counter cannot lock on to the main channel. Remember that the phone is using
a control channel as well as a "talk" channel.

Hi Anthony,
I (as well as the list I'm sure) was wondering what the RS frequency counter cost? Thanks!
Tim.
anthony489@... wrote:
Hello everyone.I would appreciate some help here.I just purchased a
radio shack frequency counter.I used it to get my 900mhz analog
cordless phone frequncy fine also used it on a pair of F.S.radios it
works fine yet how come when I try to check the frequency of my digital
Nokia cell phone it does not register? Is it because the phone is
digital? Thanks

2896. [SST] Re: What Local Frequency

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-06 17:19:17 UTC
From: toni Seckler
Topic: 2875 Message: 2896

Jerry,

Try the FCC's frequency database. It allows you to look up frequencies by a variety of ways. Once it has found a match, you need to click on all of the blue underlined words. Normally, it shows the site link first and then the frequency. It should list the type of use by a two-letter abbreviation and the person who applied for it. The address is http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts . I hope that this will help you with your search. Let me know if it helped you.

Sincerely yours,

Toni Seckler

In additon to the eight frequencies you also have med channel 9 462.950 base
and 467.950 mobile
channel 10 462.975 base 467.975 mobile
this channels are primarly used for dispatch.

From: John Holbrook
Topic: 2878 Message: 2901

If the Counter you bought at RS is the same as mine, the upper limit is 1.3 gig.
I side with the member who wrote that the counter is not picking up your phone's freq because it is a digital transmission, not that it is out of range.
OR - the phone is putting out a sidebanded coded signal. The counter cannot pick up sideband either.

frequency counters will not respond to more than one frequency at a time. If you input more than one frequency at any given time it will confuse the counter and it won't know which frequency you want to look at and you will get gibberish on the display. Another thing is that the frequency you have to measure will have to be pronounced (the strongest frequency) over any harmonic frequencies in order for the counter to read the desired frequency. It is possible that the frequency of your cell phone is constantly changing looking for a clear signal many times a second, also there may be a control signal being sent to your cellphone on an entirely different frequency, again 2 frequencies being transmitted at the same time, confusing the counter.

That's the info I needed! I had always wanted one but the stuff from Opto was in the hundreds of dollars range and I just couldn't justify it for another toy. The bad news (for me) is here in Birmingham, AL. we have about 20 RS's and not a single one has an employee that actually has enough sense to know what to do with a RS part number. Maybe I'll get lucky and find one on a shelf by myself. Thanks again for the info!

Tim.

> Dear sir,

Those frequencies are used for communication from the
ambulance to a hospital. The frequencies are usually
paired in metro areas, but if they are not, search
around the range of 463.000-463.175 for active
frequencies. remember not all frequencies are used.

Once you find the active ones and it is not
repeaterized, program both the base and mobile
frequency../
ie
463.175 Base/repeater frequency<med ch#8>
468.175 Mobile frequency<Med ch#8>
if you have to do this, turn the delay function OFF so
you can hear both sides of the coversation.

If it is repeaterized, enter the base frequency with
the delay ON

Hope this helps//

Mattenna,
It's been my past experience that it is not wise to boost any
outdoor antenna with any booster if you already have a good scanner with a
good sensitive input.
I found I got front end overload, spurious signals, intermod,
cross-talk, and even damaged one scanner of mine! There is such thing as
overkill, where seemingly it looks like things should work more efficiently
and get better results, but in fact get much worse results.....especially
when antennae and boosters are involved! Also, your cable TV booster will
probably only amplify signals between 50 and 500 MHZ and is intended to be
wideband.....not quite like those that most scanners can make good use of.

The amplifier is used to overcome the losses of long cable runs. If you run a long stretch of cable into an amplifier and directly into the scanner, your signal will die before it ever reaches the amp. The only thing to get amped up will be the signals you already had to begin with. To work correctly, the amplifier must be placed AT the antenna, then your signal will have the strength to overcome your losses.

I have an indoor scanner antenna, which I bought for my 1986 Bearcat
scanner. I bought the antenna at Radio shack for $14.00. The product No. is
200-0161. I get good reception with it, but only to about 8 miles, then it
starts to get choppy(the reception). Can you reccomend an antenna(Preferlaby

an indoor antenna) that is inexpensive that will increase my range?

Mattenna
P.S. Thank You for the Info, plus one thing I live in a concrete house.

Topic: 2936 Message: 2936

Good luck finding a linear. Mostly you can locate a linear by asking any trucker at a truck stop. Stores cannot legally sell them (as far as my experience in California goes anyway). Make sure the amp you are getting is a LINEAR, and not just a modulation booster. Do not get a MESSENGER brand since I have had bad luck with two of that type.
Do not get one under 100 watts, since you need 100 to make a noticable improvement, and to walk over the static during this high-solar-sunspot peak year.
Do not put an SWR meter between the amp and the antenna and attempt to tune, once you get the amp. Could fry a lot of stuff, including your flesh.

2938. [SST] Conversation question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-10 14:49:04 UTC
From: Matthew Middlebrooke
Topic: 2938 Message: 2938

Why do I sometimes hear only one side of a conversation on my scanner.
For example: The coast guard is searching for two missing divers
(presumingly dead), well sometimes i'll hear the coast guard asking a
question to a Navy ship, but I won't hear the Navy ship reply. Yet after the
scanner goes through a scan I'll hear the Coast Guard acknowledge the Navy
ship indicating that the Navy ship responded to the question asked by the
Coast Guard. Whats the deal here??

Mattenna

2939. [SST] BC 145 Mod

Hi Group!

Nrver been stumped? Try this...I need a mod to open the first 50 Mhz of the 400 Mhz band in my BC 145XL. I have tried to find this mod everywhere I could think ti try. Then I found SST. Hope someone can help.

Because the radios receive on a different frequency than they transmit. if they are UHF, look 5 MHz higher or lower.

several things could be happening;
1) the ship may be out of range
2) you may be listening to the INPUT of a repeater.
3) to go with #2, they may be working cross band (unlikely) or split channel
also unlikely but a real possibilty.

2946. [SST] Re: Conversation question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-11 02:37:46 UTC
From: Harry Marnell - HWMA
Topic: 2938 Message: 2946

The most common reasons for this are DISTANCE and POWER. Assuming you're on land, you are probably closer to the Coast Guard transmitter than to the Navy ship. Also, base stations, especially someone like the Coast Guard who has to communicate over many many miles out to sea, frequently have much higher power transmitters than a ship would have.

The CG station probably also has a very good antenna mounted relatively high up, so they can receive weaker signals that a typical scanner with a typical scanner antenna doesn't even know exists.

There are also other possibilities; possibly (but not likely on the standard VHF marine frequencies) the stations are talking and listening on separate frequencies. VHF taxicab frequencies are a good example of this. There, the taxicab dispatcher TALKS on 152.57, for example, and LISTENS to 157.53. The cab drivers LISTEN (to the dispatcher) to 152.27 and talk back on 157.53; so to hear both sides you'd need to have both frequencies programmed.

But in your example I suspect its distance and power (and antenna) differences.

Add Customs to your list, found primarily in the 163mhz area.They are not just airport cops. They do nationwide undercover operations in a big way.
In your MarineVHF section make sure you give the Coast gaurd it's own page.
Also add television news reporter freqs in the 450mhz range and HF ranges.
And you may want to throw in space shuttle freqs and space related stuff.

I was told to get a ham radio and get a license, regarding advice on a CB linear amplifier.
Yeah, well, I've had my ham license for a while and I prefer CB radio. Thank you.
Beats waiting for a chance to talk on ONE repeater channel for the area, not to mention the comparison between the level of exciting conversation. Most ham conversations put me to sleep and you know what I'm talking about.
Silly rules: I cannot legally converse with my own wife over the channels until she passes the test. Cute rule there.
The Ham hobby has been a waste of my time and money.

2951. [SST] Fwd: Opinion Survey/ICOM drawing

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-11 03:09:03 UTC
From: Rich Barron
Topic: 2951 Message: 2951

We are too late for the drawing, but who says your opinion doesn't still count? This survey is not about scanners, but a ham radio. If you're a ham operator or interested in ham stuff, please take a moment to fill this out and send it in to : icom@...

Rich Barron
List Dad
---snip---

We are collecting the opinions of amateur radio operators like you about Multi Band handie talkies. This is an opinion survey. We are not trying to sell you anything and your participation should improve our future products.

PLEASE TAKE A FEW MINUTES TO COMPLTE THE SURVEY. EACH PERSON WHO PARTICIPATES WILL BE ENTERED IN A DRAWING FOR A FREE ICOM IC-T8A MULTI BAND HANDHELD. DRAWING TO BE HELD AT 5:00 PM PST ON FRIDAY, MARCH 10, 2000.

Please DO NOT hit your reply button - e-mail icom@...
or you will not be entered in the drawing.
ENTER THE NUMBER of your answer next to each question:

Here are your choices for answers to each question:

a. Agree strongly
b. Agree
c. Do not agree or disagree
d. Disagree
e. Disagree strongly

Here are your questions:

1. Price is important when I buy a Multi Band handheld:
Answer:

2. Output power is important when I buy a Multi Band handheld:
Answer:

3. Being able to use it also as a scanner is important when I buy a Multi Band handheld:
Answer:

4. Durability is important when I buy a Multi Band handheld:
Answer:

5. A large easy-to-read display is important when I buy a Multi Band handheld:
Answer:

6. DTCS (DPL) is important when I buy a Multi Band handheld:
Answer:

7. Bells and whistles (many features) are important when I buy a Multi Band handheld:
Answer:

8. Being simple to use is important when I buy a Multi Band handheld:
Answer:

9. A built in TNC for packet radio or APRS is important when I buy a Multi Band handheld:
Answer:

10. The capability to receive 2 signals at the same time is important when I buy a Multi Band handheld:
Answer:

11. The capability to receive 2 signals in the same band, at the same time is important when I buy a Multi Band radio:
Answer:

12. Automatic weather warnings (SAME) are important when I buy a Multi Band handheld:
Answer:

13. What my friends purchased and are happy with important when I buy a Multi Band handheld:
Answer:

14. What the salesman at my favorite ham store recommends is important when I buy a Multi Band handheld:
Answer:

15. What the experts say in their magazine reviews is important when I buy a Multi Band

handheld:
Answer:

16. New battery technology (ie: lithium ion) for longer operation is important when I buy a Multi Band handheld:
Answer:

17. Waterproof or submersible capability is important when I buy a Multi Band handheld:
Answer:

18. 220 MHz capability is important when I buy a Multi Band handheld:
Answer:

19. 6-meter capability is important when I buy a Multi Band handheld:
Answer:

20. 1.2 GHz capability is important when I buy a Multi Band handheld:
Answer:

21. I plan to purchase a dualband handheld in the next 12 months:
Answer:

22. A small size (pocket size) is important when I buy a Multi Band handheld.
Answer:

23. Accessibility to the ARRL database for frequency downloads is important when I buy a Multi Band handheld.
Answer:

24. Having more than 200 memory channels are important when I buy a Multi Band handheld.
Answer:

Please select the appropriate answer for these questions:

1. My amateur license is:

1. Extra
2. Advanced
3. General
4. Tech Plus
5. Tech
6. Novice

Answer:

2. I would like to see the following new
features in a Multi Band handheld:

Answer: (please list).

3. I Received this survey from:

Answer: The Stupid Scanner Tricks mail list.
(See http://www.stupidscannertricks.com for more info
on this group.)

Thank you for your time, and best of luck in
the drawing.

Marine antennas on ships and vessels are notorious for causing RF problems. The problem is they have a terrible ground plane., the sea. The antenna has to be designed to be both durable (able to resist rust from the salt water), usually made of fiberglass, and in addition to be able to withstand the changing positions of the boat in the water which changes swr and antenna loading on the transmitter. In addition, the antenna is constantly moving around. I believe the average power of a marine radio is around 100 watts, whereas a coast guard base station not only uses much greater power, but more than likely have antennas at higher elevations as well as better antenna design and gain, able to receive weak vessel signals at a greater distance. You must also understand VHF signals can only be received at line of sight, what that means, is that if you can't see it, you can't receive it, as the earth bends the signals don't and they go out into space rather than bend around the contours of the earth. This theory does not hold true to shortwave frequencies which propagate through various layers of the atmosphere and bounce off them similar to light reflecting off a mirror. Hope this helps answer your question.

2955. [SST] Re: Linear CB amplifiers

Topic: 2936 Message: 2955

use of 11 meter amplifiers in the United State is totally illegal and asking people on this group for advice on how to obtain information is not only foolish but is also a crime. You are allowed 4 watts again thats 4 watts input to the final amplifier stage of the power amplifier. You could either obtain a better antenna, get a multi element yagi (beam) antenna, or get a higher gain antenna, it may not work as well as a "linear" but all the crap coming out of an 11 meter linear will no doubt draw attention to yourself from TVI to your neighbors TV, cable, computer system, or whatever, will no doubt cause you more problems than its worth. If your so bent on power, why don't you get a ham license, you will be able to use 1,000 watts, do it legally, and believe me, you'll have alot more fun doing it too!

2957. [SST] PRO-91...any hints, tricks, mods appreciated!!!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-11 13:01:12 UTC
From: Rick D Garrett
Topic: 2957 Message: 2957

Hi All,

I recently picked up a used PRO-91, and I LOVE it! :))) (especially since it was CHEAP)
I don't have a manual for it so been using the online manual.....can anyone let me know of any undocumented tricks, hints, or even perhaps mods for this handheld? Maybe even there's a site somewhere I don't know of that is dedicated to this radio.

Thanks for any help, and 73,
Rick N9GSU

If you are a ham should know that there are some amplifiers that you can mod to work on cb but you'll have to do this your self. But to start with check out a co called Ameritron they are at www.ameritron.com and good luck find something that is if your up to the challenge.

Why do others insist on quoting the laws to others on this list. I am sure most everyone knows what is legal or elegal. If you cant help the guy with the linear question than there in no reason to respond. IMHO

Bob

2962. [SST] Linear CB amplifiers

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-11 18:49:32 UTC
From: brown82@marshall.edu
Topic: 2936 Message: 2962

Truth is, I've been on the road and relayed messages for truckers with 200 watt amps. My signal got out further because I have a 9 foot whip and they were running dual 3 foot antennas. 4 watts will do great with the right antenna.

2963. [SST] Re: Bike scanner?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-11 21:45:15 UTC
From: Tim Suggs
Topic: 2899 Message: 2963

Hi Andrew,
I just got through fabricating a mount for my "road gear" for my mountain bike that holds my BC245xlt scanner, my GPS, and my cellular phone. I believe I read in another post that you were 12? If so, consult an adult before working with the power tools I am going to suggest. But on the other hand, you may be better with powertools than I am (I'm 43 and I may get older, but I refuse to grow up!)

First, I use velcro to hang my stuff all over the inside of my cars. I have velcro patches all over the place in the cars. And I have velcro all over the backs of my scanner, cell phone, GPS, etc. It enables me to make my stuff fit in all of those unused spaces on my dash, and it keeps them in easy sight and reach. So I have also used the velcro on my "road gear rack" as well.

Second, get a thin piece of 1'8" plexiglas and measure between the handlebars. Mine is slightly triangle shaped and uses the the top of the handlebar stem as the bottom resting point for the triangle, and then widens out as it goes up towards the handlebars. I have drilled holes at the bottom and the top on either side and then I use cheap nylon wire ties to strap the thing to the bars/stem. Mine extends past the bars by several inches so I can use the clip mounts on some of my "stuff". I have all of the gear arranged on the mount and secured by both velcro and the clips. I usually have close to $1000.00 worth of toys riding up there, and I don't like it when they fall off, so I use either a very small bungee cord, or some large rubber bands as a last resort to make sure they don't fall off. I'll try to take some pics of the thing and send it your way if you like. And you can cut the plexiglas with a simple jigsaw. Hope this gives you some ideas!

Tim.

Hi the optimal length of a CB antenna is 102 ".
The best antenna I believe on the market now is the WILSON 1000 or 5000.
Or the solarcon magnet mount. The latter is less expensive.
The length of the coax is optimal @ 11.6 ft. Or 139.2 inches.
There is no doubt that a 200W amp will go further than a 4W
Plane Jane CB.
The problem is receiving the transmission of the person
Trying to get back to ya with the 4W CB.
The use of the AMP is good for skip.
To talk to a transceiver many miles away.
But for local use it is stupid and a waist of energy.
Check out http://www.copper.com/
For some good info. on CB's

2973. [SST] CB thread is dead

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-12 03:44:29 UTC
From: Rich Barron
Topic: 2973 Message: 2973

This CB thread is now dead.

Why?

1. It's a scanner group.

2. The CB group is at StupidCBTricks-subscribe@egroups.com (e-mailing this address will subscribe you to it.)

3. It's degraded to a flame war, which is my fault for not watching the moderators more closely to make sure that junk like this doesn't go though.

Andrew Koch
http://g3.dynip.com

Figure 4.4 shows partitioning of the drive using an ordinary hacksaw.
Partitioning in this manner is advantageous over fdisk.exe or Drive Setup
because it allows partitioning of individual platters and is independent of
operating system. You also get to make cute designs.

From: Jack Ricci
Topic: 584 Message: 2977

Matenna,
I have experimented with antennae under similar conditions and
became a little dissappointed, but I found one trick that worked very well
for lower frequencies between 500 KHZ and 150 MHZ, even in a block building
or block underground basement!
The scanner I was using was a YUPITERU MVT 7100, a very good
full coverage scanner to start with (covers 530 Khz to 1650 Mhz- *export
type* with no lapses between any frequencies stated- and multimode reception
in WFM, NFM, AM, LSB, and USB).
It comes with a metal telescoping antenna and I added a Sangean
ANT- 60 portable shortwave reel antenna to the scanner antenna by means of a
snap-on connector which clips onto the telescoping whip. The Sangean is a
long wire antenna on a portable reel which can be pulled in and out, hung
between curtains or windows or walls, or can be hung out the window when
needed, and reeled back together and out-of-sight when not in use! Radio
Shack sells a similar product in the $20.00 U.S. range but I was unhappy
with it's mechanical operation compared to the Sangean ANT-60 operation. As
antennae, they both appeared to work the same and made an obvious difference
in the lower bands.
If this doesn't work for you, a new scanner might be needed, or,
a new location where communication is really happening!
Jack

From: Andrew Koch
Topic: 2979 Message: 2979

I just got an old discarded Primestar dish. Used an adapters to hook the F type connectors to my scanner...

Now, what frequency does the dish *normally* work at?

I want to rework the dish to work for other things.... Maybe as a high-gain directional...

Who knows.

Andrew Koch
http://g3.dynip.com

2982. [SST] 50 Ohm to 75 Ohm Impedance transformer

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-13 01:08:04 UTC
From: brown82@marshall.edu
Topic: 2951 Message: 2982

Does anybody have any plans for a good 50-75 ohm impedance transformer. I'm using a long run of 75 ohm air insulated hardline and I want to convert it back to 50 ohms for the scanner. I just got done with an 80 ft tower and I've mounted several antennas. I want to place the amp right at the tower (so I'm going to turn it into 75 ohms there, use an outdoor TV amp, and convert it back to 50 after the long run of coax). I'd like to build one that could handle 1kW for my TX antennas.

Don't waste your time with a transformer, Isn't needed and not practical
for what you want it for anyway.
You won't gain a blessed thing and would just cause extra loss.

2988. [SST] Help With PRO-94 & Trunked Radio Systems

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-13 08:17:13 UTC
From: gldngate@earthlink.net
Topic: 2988 Message: 2988

I recently purchased a Radio Shack Pro-94 scanner as a replacement for my Uniden which had an "accident".

I live in a community which operates on a trunked radio system (San Rafael, Marin County, CA) and I am unable to figure out how to activate the trunked feature on this PRO-94. I have been in contact with several other scanner enthusiasts and they have been unable to assist so far.

Any suggestions on this trunked feature?

Also, does anyone know how to "unlock" or "tweak" this model in order to pick up those blocked frequencies that Uncle Charlie doesn't want us to hear?

Thanks,
Bob

You do not need 50 ohms on a scanner 75 ohms will work just fine..look it up !

From: brown82@marshall.edu
Topic: 2986 Message: 2990

If I TX 1000 watts into a 75 ohm load, I'm going to make around 700 watts of signal and 300 watts of pure amp cooking Joule heating that will turn my expensive machinery into an expensive doorstop if my heat sink can't keep up.

Andrew,
The LNBF on the nose of your primestar dish requires 14-18 VDC
to switch it's polarity from vertical to horizontal, and it will kick out a
KU frequency between 1450 and 1750 Mhz roughly, but it will be downconverted
to 950 Mhz so that the signal can be carried by RG6 or RG 56 coax . The
primestar receiver would have supplied the voltage through its' coaxial
connector to the dish, but you can use a separate power supply from 12 to 24
VDC as long as you isolate the voltage being sent to the LNBF from getting
into the input of the experimental equipment you want to connect it to. It's
not as easy to experiment with unless you have more gadgets to interface
between the dish and your scanner.

Topic: 2986 Message: 2992

Don't waste your money.
A repeater club that I know, uses 3/4 inch CATV feedline on all of thier repeaters. The loss is not worth messing with! The biggest thing is that they coax must be jacketed to keep noise down in full duplex. Your scanner will never know the difference between 50 ohm and CATV 75 ohm.. neither will your transmitter.
Bob

Brent,
One of those 10-foot or 7 1/2 foot screen mesh C & KU Band satellite dishes and a good General Instruments 450i or 550i satellite receiver will do the trick just fine, but it might cost more than you're bargaining for! There are lots and lots of radio stations and specialty audio services up there. A big dish and an SCPC (single channel per carrier) satellite receiver or FM 2 (FM squared) receiver would even be better. This does require a fair bit of knowledge and experience to get involved with.

There's a manual and other tips online at
http://www.uniden.com/docs/service/supportdetail.cfm?item=BCT7

I know of no mods, but if it were legal I would search from 896 to about 920 MHz to hear "images" of the cell frequencies. Or if I were in Canada. ;-)

I have one.. and the manual.

Not sure how much help it really is though. Feel free to email regarding questions, etc... I just bought it and would be interested in any mods/etc too. I'm new to scanners.. I got it for the usual reasons, and to also be able to monitor multiple CB channels in my Jeep.

do j-pole antennas get good reception of freq's between 30Mhz-500Mhz?
I have plans for a simple J-Pole ant. It involves 48in of 300 ohm twin lead TV antenna wire soldered to some coax cable and then connected to my scanner(the coax cable not the 300 ohm wire is connected to my scanner). the twin lead antenna is then taped to the window. I live in the boonies, and will this type of antenna help me? If can somebody recommend a better antenna?

Oh Andrew, now you got me thinking... Well, what can you do with an old dish set-up? I have 3 of the huge wire mesh models at some of my rental homes that are just sitting there rusting away. Maybe I ought to send in that $25.00 check to SETI and join up my array. I really liked the comment someone had about turning an old dish into a huge directional parabolic mike (I have some penthouse properties that would probably work with that idea). Maybe I could swap my mesh units for some of the old fiberglass units and have the largest bird bath in Alabama? So, seriously what can you do with one?

Tim.

3001. [SST] Re: Help With PRO-94 & Trunked Radio Systems

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-14 17:26:50 UTC
From: toni Seckler
Topic: 3001 Message: 3001

Bob,

I live on the Peninsula and also own a PRO-94. In order to use the trunked feature, you need to program the frequencies in first. Follow these steps;

1. Locate an empty bank of channels on your scanner.

2. Once you have done that, hit PRO (Program) and then TRUNK.

3. Next, the scanner's display will display all 10 banks in either Mode A or Mode B.

4. Select one of the numbers from 1-10. Then it will display the type of trunked systems you can program it to trunk track. It will show under Motorola (E1) for a Type 1 system, 800 MHZ, VHF, or UHF, and for Ericsson trunked systems it will show an E. Use the up/down arrow keys on the lower left hand side of the PRO-94 to make your selection.

5. Once you have done that, hit the E (Enter) key in the lower right hand corner of the numbered keypad. Once the type is set, then you can begin programming your trunked system. You have make sure that the scanner is in the trunked mode while programming or else it will process the frequencies as regular 800 MHZ frequencies.

6. Once the last frequency has been entered, then hit the SRCH key to let the scanner find the data channel. This is the last step. You may listen to the system or exit the trunked mode by hitting the TRUNK button.

7. When you are in the conventional and wish to listen to your trunked systems, then hit the TRUNK key and the banks with systems in them will appear. Use the numbered keypad to make your selection.

8. A square will appear underneath the selected bank. Then hit either the E (Enter) key or the SRCH (Search) key to begin trunk tracking the desired system.

I hope that this explaination will enable you to enjoy the features fof the PRO-94. Please e-mail me at tjs588@... if you have any questions or problems.

Sincerely yours,

Toni S.

Any antenna is better than no antenna. If I lived in the boonies, I would use a TV antenna. A TV antenna is broad banded to cover VHF low to UHF hi as well as FM broadcast. A discone is a very good broadband antenna also. I happen to use one to transmit with. I am able to cover all of the 6m band, 2m band as well as 70cm band - plus it is ok up to 1290MHz, but marginally (I get so much loss at 1.2GHz that I never see any reflected power)...

Matt.....

The J-Pole you are discribing is just below 2 meters. I have had great luck
on both 2 and 6 meters usimg J-pole ants. The 300 twin lead home brew ants.
work very well for both tx & rx.

gud luk es 73

Dear sir,

first you push and hold the trunk button, when it beeps, select the bank you want the system to be on (only one system at a time) enter the frequencies in DECENDING order. after that is done, go back to conventional mode and check the bank you programed. once everything is right, press "trunk" and the bank number. once you are there, press "search" that will find the control channel. once that is found, it will search the system.

Hope this helps..

3009. [SST] Re: 50 Ohm to 75 Ohm Impedance transformer

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-15 03:18:16 UTC
From: Stephen H Dobak
Topic: 2986 Message: 3009

The extra loss will be the square root of the swr, with a swr of about 1.5
(75/50) the extra loss will be 1.225 over
1-1 swr, the loss will be heat in the feedline, hardly turning your amp into a
frying pan, your amp should be able
to match 75 ohm's anyway.

Good luck, Steve
brown82@... wrote:

> If I TX 1000 watts into a 75 ohm load, I'm going to make around 700 watts

I have a pro 92 and it requires you to program your frequencies and your ID's and then you need to ooperate in "closed" mode for trunking. I have no idea if the Pro-94 and Pro-92 are identical but I'm sure that they are close....good luck.

Making the phone use more power will not help because like on Normal Radio all you end up with is people and hear you but that CANT Hear them, and being a phone system is Full Duplex Bad news...

All I can suggest is you get a Sat Phone, or one of those Beakens you can get for about A$150 (once off)

Or get a REALY Big antenna

In regards to the below info, I would like to know of any type of an amp and also where can I find a 4 watt phone. I too am of the same mindset for emergency use/life saving etc, not to worried about the FCC as I know my self discipline and it would not be used for messing up the frequencies, this goes for all mods n amps....

df -

Not a direct answer to your question...but the propagation on those freqs is relatively poor compared to lower freqs...even with lots of power you may not make it to a cell site if you're out of normal coverage range. Get the best gain-type antenna for cellular freqs and try to mount it on a good ground plane....

A 2-meter ham radio might be a better option...even most parts of the Mohave Desert are in range of a 2-m repeater, many with phone patch capability

More to follow...

Hey Now! Hey Now! Hey Now! Try this=http://www.bearcat1.com/free.htm
. ITS FREE!!!!!!!!!!!!!!!!! :)

3030. [SST] reply to "discone or TV"

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-24 04:54:05 UTC
From: brown82@marshall.edu
Topic: 3026 Message: 3030

If you feel like continuously pointing the antenna around, a TV antenna will give the best results. You can pay up to $200 dollars for a really good TV antenna. A discone antenna receives OK in all directions, not really anything to write home about, and costs $60. Hypothetically, if you like to listen to your neighbors on their cordless phones, a TV antenna could be rotated to zero in on the source. POINT IS: a TV antena works like a SPOTLIGHT while a discone works like a LANTERN. Wanna' see stuff a long distance away and sacrifice everything around and behind you, or do you want to hear everything a much shorter distance away. It all depends on your specific application. You wouldn't put a porchlight on your car and you certainly wouldn't put headlights on your porch.

There's actually a cell phone signal booster manufactured by Powertec Australia called Powertec ANB3 GSM Signal Booster. Unfortunately, it's only compatible with certain types of cellular radio network, namely GSM and CDMA. The manufacturer claimed the amplifier will boost signal strength by up to 8X (approximately 20db.). Cost is about USD180. Check it out at: http://www.powertec.com.au/

i would say discone cause TV antennas are horizontal while 99 percent of all scanner traffic is vertical.. discone need not be pointed and TV does.. also discone can be used for broadband transmission not so with most TV antennas

discone has little or no rf gain. a discone is great for local pick up a piece of rg58 of about 12 inches long taped on a window or faceing a water source will pick up further than a discone. i use a maxrad antenna on my scanner.this antenna has aboom across the middle with 3elements and has a gamma tube.i don't use the gamma tube because i use it as a multi band antenna.u can use this antenna as a single frx if u want by ajusting the gamma tube. i live in oregon 45 miles away from the city and i can pik up seattle frequencies and as far as springfield oregon.i am surrounded by cascade mtns and the coastal range mtns.i also sit in a hole(valley) i paid 75.00 dallars for this at radio shack it is a special order antenna.i would highly recomend tis antenna for professional scanner listeners i use it for all bands.this is the best antenna i have used since 1981 when i started scanning.

My friends and i live in a small 5 by 5 mile township and we wanted to communicate from house to house, but also use whatever we get outside and while driving. I was thinking that handheld UHF radios were the way to go , but i want sure. I would appreciate any suggestions and or offers to buy euqipment. (i already thought about ham radios , but dont want to go through the trouble of all getting licensed). Thanks alot.

The way I understand it (Please, correct me if I'm wrong) you cannot
transmit at more than 1 watt without a license....

Depending on the terrain, this may or may not be enough. If it is extremely
flat and open, you MIGHT be able to get away with it, otherwise you will
need 5 watt hand held radios, which require a ham license.

3043. [SST] FRS

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-27 05:20:00 UTC
From: brown82@marshall.edu
Topic: 3038 Message: 3043

FRS radios do an OK job up to about a mile. I used a set during Hay season to call my girlfriend to bring the tractor about a mile away. I've also used it while "convoying" and they worked well until about a mile away, which is only 10% of the range I get from my CB. The major things that prevent FRS from being very intelligible are:
1: Lack of a good antenna
2: Lack of a connector for an external antenna
3: Poor audio circuit

The poor audio shows its ugly head at about a mile. The package that says "up to two mile range" doesn't say that the last mile is so full of static that it can't be heard. More problems are the batteries and their short life, and the awkward controls. Truth be know, FRS is a lot better than their toy predecessors, but they need a lot of improvement to even be equivilent to the quality of a new RadioShaft handheld CB.

3044. [SST] Re: Long Distance handhelds

Yahoo group: stupidscannertricks (1998 — 2000)

From: Tim Suggs
Topic: 3039 Message: 3044

Look into the FRS radios like the Motorola 250 and such. Depending on your terrain, you might be able to get 5 miles out of them, and at a lot less cost than a lot of other UHF choices ($79.96 @ Wal-mart). I have gotten crystal clear reception (line of sight) at close to 4 miles. We have 4 units for the family to use when we all go places together. They're great for shopping trips to big malls (pronounced "Galleria") and even the local grocery store. I often drop my wife off at the door of whatever store she is going to shop, and then I might go a few doors down to the fishing store, when she gets ready to come out, all she has to do is give me a hollar on the radio, and I can abandon my "worm bar" selection and high tail it to the car to go pick her up (yes, I know what side my bread is buttered on). Makes life a lot more convenient for us.

From: richard robinson
Topic: 3046 Message: 3046

OK ///I have to point out one important fact that I have not seen anyone mentioned.

POLORITY

Most all signals about 30MHz are vertically polorized except the FM and TV bands.
You can loose 20dB when crossed polorized. The only way to compare these two antennas is to mount the TV antenna on it's side. Remember the antenna beam width of your TV antenna is "fan" shaped, the narrow beam is in the azmiuth direction so when you roll the TV antenna 90 degrees you loose that narrow beam and your on the wide beam with of the of the "fan". A typical TV antenna will have a horizontal beam width of about 30 deg and the vertical beam width is something like 120 deg.
The discone is vertically polirized and omni directinal. The gain it low and picks up some gain by reducing the coverage on vertical axis.
Don't know if all this helps or clouds the issue but had to toss in my $.02 worth.

3049. [SST] funny dispatch

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-27 19:45:22 UTC
From: toni Seckler
Topic: 1888 Message: 3049

Last week I was monitoring San Mateo County (CA) Control 1 (fire) and heard a call go like this:

Dispatch: "Quint 1, respond on a public assist to ..... in Menlo Park. Map page ...., respond on Control 1.

(silence)

Dispatch: "Quint 1, you are responding on a 2 1/2 year old male child who has a toilet training seat stuck around his neck."

Quint 1: (unbelievingly tone in firefighter's voice): "We are responding on a male child with a toilet training seat stuck aroind his neck?"

Dispatch: (dispatcher laughing):"That is correct." (cuts off quickly so as not to prolong her embarassing reaction)

(silence for about 2 minutes)

Dispatch: "Quint 1, you can cancel per PD on-scene, they were able to free the child."

Quint 1: (frustrated reaction at being ironically cancelled as they were arriving at the scene): "Quint 1 copies, we were just arriving on scene and are returning to quarters."

I hope that this little story causes some amusement as it is uncommon for such a call to even occur and give the dispatchers a chance to some of their work-related stress by laughing.

Enjoy,

Toni Seckler Jr.

Get a CB walkie talkie like the cherokee AH-27. Have the extra channels put in it(to get a way from the skip and noise on the regular channels) and you will be all set. You can use it for car to car communications with the included rubber duck(for about 1 mile range), and at your house you could make a dipole antenna and connect it up to the walkie(for a 10-15 mile range).

The only other thing would be to use GMRS through a repeater. But you have to pay for a license to do that.

Licensing isn't really related to "watts," but rather to the frequency (and radio) you're using. To transmit on ham (amateur) radio frequencies, at ANY power level, you need a ham license. For the "around town" frequencies, in the 2-meter (144-148 MHz) and 70cm (440-450 MHz) bands, a written test is all that you need to pass for a license. No more Morse code requirement for those and higher ham frequencies. And you are allowed access to mountaintop repeaters if you like, for dozens of miles. A ham portable can be gotten for $100 or so, and up.

The "FRS" radios are intentionaly limited by the FCC to low power portables with built-in antennas, but no license is required to use them, nor are repeaters allowed at all. FRS can be used for personal business or personal stuff; business communications are prohibited on ham radio frequencies.

Depending on the terrain, this may or may not be enough. If it is extremely
flat and open, you MIGHT be able to get away with it, otherwise you will
need 5 watt hand held radios, which require a ham license.
>>
Ya, cb radios transmit at 4 watts without a licence but, older cb's might
be able to transmit more.

Percon has a nice, free, FCC database at
http://www.perconcorp.com/scripts/foxweb.exe/procmenu?\0\FCC\SPECTRUM\SPECTR
UM\SPECTRUM (yep, that whole thing is the URL)

Also, from www.csp-tech.com
you can download a free database thing called ScannerbaseXE, and as many
state files as you like, and do it offline all you want. Check out
http://www.csp-tech.com/sb_main.htm and use the ScannerBaseXE stuff...the
CD is sold out anyway.

Finally, for THE most current stuff, you can use the FCCs own database at
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts It takes
some getting used to, but it's up-to-the minute.

To the best of my knowledge, turning it on while pressing 2 and 9 will clear all the memory. If it has a problem like flashing funny stuff, turn it while holding in 3,5,7. This will reset the CPU without removing anything from memory.

> is it possible to erase all of the Freq's on the Pro 94? Unless if I enter it

Harry
I heard the ham requirements for a tech license has changed recently.
Where on the web can I find out what the new requirements are? Also where
can I get a book with all the questions in it for the test.
Bob

3060. [SST] Marine Antenna Tesla Coil!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-03-28 03:37:53 UTC
From: Jack Ricci
Topic: 3060 Message: 3060

An interesting question arrives again. Maybe some of you know the answer and can help me remedy the situation.
At various times during my installations career, I have installed various communications antennae that have shown me some strange behaviour!
They arc and spark like crazy at the PL 259 connector in the house or office when not connected to any equipment! The last one I did was a marine antenna(about 140-170 MHZ), a fibreglass Shakespeare antenna bragging a 9db gain omnidirectionally over an isotropic source. It's atop a 70-foot self-support tower and utilizing 50-ohm RG-8 copper coax. It makes so much noise daily and nightly that the owner is scared it is a fire hazard, and refuses to plug any equipment into it because it appears to have damaged his Bearcat Scanner!
It doesn't matter what the weather is doing; I originally thought it only happened prior to a thunder storm because I noticed this phenomenon before, just before a storm, with other antennae! He does have a TV antenna with preamp up there, and a 4-element marine base antenna on the same tower, but experimentation appeared to eliminate them as the source of constant arcing between the center conductor and outer shell of the cable end.
Of course, he's politely begging me to fix it-cause I'm a nice guy-but, I'm stumped, and I really do want to correct the situation because he's a pleasant customer.
Should I join the TESLA usergroup, or can I call upon your experiences for help on a remedy?
Thanks,
Jack

> Dear sir,

The truth is that you can use a "simplex repeater" on
the FRS frequencies. all that does is digitally
records the transmitted signal, then plays it over the
radio. you have to have a FRS radio hooked up to
these, and it does not boost power. but if you put it
high enough, like on a second story window, the range
can be increased. These simplex repeaters are

available at Radio Shack by special order. They can also work on other radios also, ie: ham, business, other personal radios that have an external ear and mic jack.

Let me know what you think

The ARRL is probably the best site, though I personally don't go along with all their opinions on stuff. The new info is at http://www.arrl.org/news/restructuring/faq.html

That is blatantly not true, you need a ham license to transmit on any ham frequency. The frequency you are allowed to transmit on is dependant on the class of license you have.

OK, are you saying you're retransmitting it with a "second" FRS radio? If so, you may be right. I don't think repeaters are specifically prohibited.

Here's some stuff on it from the Personal Radio Steering Group at http://www.provide.net/~prsg/frs-faq.htm#Q10 ...

The FRS Rules do not expressly bar FRS repeaters. The FCC has certainly not authorized any type of repeater equipment for use in FRS.

To use an existing FRS radio as a repeater, you would have to set it up to retransmit signals without connecting anything to the FRS radio that was not FCC-certified as part of that radio. Repeater controllers, external receivers, etc. are very unlikely to be FCC-certified as part of the FRS radio and so could not be connected to it.

11. May I connect an external antenna or power amplifier to my FRS radio?

No. You may not attach any antenna, power amplifier, or other apparatus to an FRS unit that has not been FCC certified as part of that FRS unit [95.194(c)].

An FRS antenna must be an "integral part of the transmitter" and have no gain as compared to a half-wave dipole [95.645].

12. May I connect my FRS radio to the telephone?

No FRS unit may be interconnected to the public switched [telephone] network [95.193(c)].

13. May I broadcast music over my FRS radio?

No. You may only use FRS to conduct two-way voice communications with another person [95.193(a)]. Only these types of one-way communications are permitted [95.193(a)]:

To establish communications with another person (to call them);
To send an emergency message. The FCC defines an "emergency message" as "concerning the immediate protection of property or the safety of someone's life";
To provide "traveler assistance";
To make a voice page;
To conduct a brief test.

OK. First, if it is sparking on an electrical appliance, check the outlet to see if it is properly wired. Proper wiring is as follows: if the outlet is installed with the round ground hole on the bottom...
*plug the black lead of a voltmeter into the round ground hole on the outlet
*then plug the red lead of a voltmeter into the left slot (it should give a reading of 0 volts)
*remove the red lead and plug it into the right slot. It should give a reading of 120 volts.
If this is backwards, your radio chassis is being charged at 120 VAC. So sparks could be travelling to the grounded shield of the PL-259. Or maybe, your antenna is picking up atmospheric electricity. On larger antenna towers, during some conditions, the grounding system can be momentarily disconnected and big sparks will jump to the ground. Just a few theories.

The ramsey kits are not adjustable. they only work with a single crystal controlled oscillator frequency. I built a custom model from CTP that is adjustable between 2000 and 5000 Hz. The CTP model is the one you want.

most scanners you turn off put your fingers on the number 9 and number 2 hold them down while you turn on your scanner this should erase all programed frequencies some times you have to hold down 9 2 and E while you turn it back on.

On the other hand, I found this in the FCC regs for part 95...note section (c)...

95.194 (FRS Rule 4) FRS units.

(a) You may only use an FCC certified FRS unit. (You can identify an FCC certified FRS unit by the label placed on it by the manufacturer.)

(b) You must not make, or have made, any internal modification to an FRS unit. Any internal modification cancels the FCC certification and voids your authority to operate the unit in the FRS.

(c) You may not attach any antenna, power amplifier, or other apparatus to an FRS unit that has not been FCC certified as part of that FRS unit. There are no exceptions to this rule and attaching any such apparatus to a FRS unit cancels the FCC certification and voids everyone's authority to operate the unit in the FRS.

Hmmmm

Some years ago I was at work which required me to listen to fire dept. related dispatches that had been recorded over night. I was listening to a tape on double speed (which as you know is very fast talking), while chatting with the owner of the co. I suddenly thought I heard something very unusual and rewound the tape to the tones..It went something like: "Med 121, 123 Sq 121 respond to (the address).....break" silence for a good 20 seconds then again "Med 121, 123, sq 121, Medical Aid respond to (the address) for a 14 year old.....break" then at least 45 seconds of silence.....Again toned out and " Med 121, 123 Sq 121 respond to (the address) for a medical aid".....open air.....muffled sounds like giggling....."14 year old male with".....dead air 10-15 seconds.....(sounding triumpent)"certain appendage stuck in zipper" I cringed in pain for a moment before my boss and I cracked up! Just thought I'd share one this time...I have heard a lotta funny stuff over these 10 years but that one was about the best. Jason

Does anybody know how to find police freqs in these databases??
I read on the web that they have police, Fire, and med freqs in these databases, so how does a person find them????

Mattenna

3089. [SST] Re: Percon and FCC Databases

do u have the CD, they have queries pre-built for you.

i personally dont care for the interface, i dumped the entire
thing(including business freqs, YX category i think) into a database on
my PC and then i can query based on readio service codes.

3090. [SST] Re: Percon and FCC Databases

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-01 00:12:39 UTC
From: Harry Marnell
Topic: 3089 Message: 3090

well, up until a year or so ago, police freqs were identified by the sesrvice code "PP;" however, now all public safety are lumped together in a larger pool of freqs identified as "PW."

Watch for freqs that have been traditionally police, or are in the same band as existing "PP" freqs.

In the FCC database, watch the second page "licensee" info...it frequently will identify the agency's contact person, such as Police Chief Joe Knuckles, or Capt. Ward LaFrance, Fire Dept.

It's going to get harder...the old "Public Safety" (police, fire, highway, local govt) freqs are now all in a single pool; Same for business, industrial, special industrial, are all now in a blanket first-come, first-served "IW" industrial pool.

Harry Marnell

3100. Radio Shaft incident...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-02 04:45:54 UTC
From: brown82@marshall.edu
Topic: 3082 Message: 3100

I just wanted to let everyone know, since we all seem do deal with RadioShaft at one time or another. I was at my local RadioShaft buying 2 u-bolts for an antenna assembly. I was at the counter paying for these when I inquired about the Police Call book "new 2000 edition" and asked to see it. The clerk, who by the way know diddly squat about radios, told me the following: "I can't let you see that unless you buy it." I said, "Why?" He said, "Because we are losing sales by letting people see inside that book. People take advantage of our trust and memorize the frequencies." So I said "Take these back, I'll buy 'em at Lowe's." He told me it was a new company policy. 1: The customer is always right or you lose the sale. This policy tells me that they don't trust their customers. Don't buy from someone that thinks you are a thief. Please let RadioShaft know that RADIO ENTUSIASTS put them there, not DirecTV salesmen. Yesterday, they permenantly lost their best customer. Watch out for their tactics, they aren't customer friendly anymore.

Sounds to me like you, unfortunately, ran into a lousy salesman. I would complain to the store manager, and if you get the same response from him/her, then I could see a problem. Too bad too, the "Shack" here in San Luis Obispo, has let me look through Police Call as much as I please...

From: rakook@webtv.net
Topic: 3109 Message: 3109

They have never been customer friendly. When I brought Directv I talked to 2 or 3 different sales persons. None knew what they were talking about. If you buy lets say a handheld scanner the charger is extra. I think they are very dishonest.

When I purchased Police Call they clerk at the counter said "Why u buying this u can just look them up on the internet"

Also does anyone here ever listen to the casino's security? I've heard some crazy stuff happing at casino's lately, like people getting mad and stripping and a lady shooting a slot machine.

From: Gene Lockwood
Topic: 3115 Message: 3122

Here you go . . This is where you can get the best price. They delivered
my 895XLT in
two days . At a time when no one could get them !
Communications Electronics wants to clarify the future delivery date of the new
Uniden Bearcat 780XLT. As a Uniden Master Distributor under contract with
Uniden, it is our responsibility to make sure you have up-to-date and
accurate information the Uniden products we distribute.

Even thought the information on the expected delivery date for this
product was previously published on our web site, we recently have received
many
inquiries asking when the new Bearcat 780XLT scanner will be scheduled
for shipping to Communications Electronics, its dealers and clients. As always,
our latest factory official information is always posted on the CEI web
site at http://www.usascan.com. You can view the latest news when you visit
the web site and then click on "CEI News". For your information, on
January 5, 2000 the CEI News release listed below was published on
the Communications Electronics web site:

From: "Scanner Marketing and Distribution Services" <cei@...>
Reply-to: usascan-owner@onelist.com
Subject: [usascan] Reserve your Bearcat 780XLT scanner from
http://www.usascan.com today
Content-Type: text/plain; charset=iso-8859-1
Content-Transfer-Encoding: 8bit
X-UIDL: d1c2cad7af3dac38a728fff234f5dfd5

From: "Scanner Marketing and Distribution Services" <cei@...>
Uniden newest scanner, the Bearcat 780XLT was introduced
at the 2000 Consumer Electronics Show last week.
For additional information on this Uniden Bearcat radio
visit the Communications Electronics web page at:
http://www.usascan.com and click on "CEI News".
There is no obligation and no down payment needed
to reserve your scanner. Make your reservation today.
Good Scanning and 73,

I've never been charged for a catalog at Rat Shaft... but than again, I did spend over umm... jeez... $8,000... (Ouch)

Besides, there catalogue is now available online.

And so far, I've only gotten some bad advice from them... It does help that the manager of my favorite shack is a Ham...

Andrew Koch

Check the GROVES web site , they are advertising it now. You can also check SCANNER WORLD and UNIVERSAL RADIO. I just bought the 245XLT Trunk Tracker and got a really good price below advertised through Universal. Bob

Hey I need to know how to find the IF freq of my scanner. My owners manual says: IF select. -55dB @ +/- 25 KHz . What in the world does that mean?? Is there another way in finding out the IF freq? My scanner is a BC140 1986 model.
Another thing is what is DBA in the Percon database??

From: Harry Marnell
Topic: 3134 Message: 3134

Most Bearcats from that era used a first IF of 10.8 MHz, though I'll try to track down the BC140.

"DBA" means "Doing Business As"...usually the owner of a company. Such as "Smith, Joe doing business as Crosstown Plumbing Company."

The BC2500xlt and its successor the 3000xlt receive the 220 band (straight through coverage from 25 to 549 MHz, in fact). Same for the BC9000.

It means that when the signal passes through the IF filter,
unwanted signals that are 25 kHz away are suppressed by 55 dB.

My Radio Shack store wanted to charge me for a catalog even though for years I was able to get it for free. I went to Radio Shack's website and sent them an email and complained and they mailed one to me no charge. I would suggest anyone having a problem with a store to go to Radio Shack's website and send them an email. You never know;you might be pleasantly surprised. Steve

Topic: 3144 Message: 3144

I work at a radio shack and evan tho the
cataloges do have a price tag on them, i have yet
to charge anyone for one. And your right, many of
my coworkers don't know much about scanners but
thats because we don't make much money from
selling them. Besides, most people who come
looking for a scanner have a pretty good idea of
what they want, ussually to the point of showing
me a picture of one in the cataloge and telining
me thats the one they want. Back to the police
call inccedent. With every scanner that we sell,
we include a list of all the police, fire, ems,
airport, public service and several other
frequencies from around the county.

But you are right that we don't say "I don't
know" . if we don't know something, we'll either
look it up or ask someone who does. (I've called
technichians before)

you dont need a license if your operating a non ham radio,like cb,but you do need one for any ham gear,per part 97..unless you like stiff penaltys --- Andrew Koch wrote:
The way I understand it
(Please, correct me if I'm wrong) you cannot
transmit at more than 1 watt without a license....

Depending on the terrain, this may or may not be
enough. If it is extremely
flat and open, you MIGHT be able to get away with it,
otherwise you will
need 5 watt hand held radios, which require a ham
license.

Andrew Koch

Yep. I agree. They made much better stuff in '86, but they've dicontinued lots of the good stuff. And now their only job requirement is a drug screen and cash register skills. Forget radio knowledge. By the way, I took the advice of someone here on the board. I e-mailed Customer Relations in Ft. Worth. They said they were sorry for the actions of the local franchise, but they never told me any specifics about new book policies, and I take the apology to be less than whole-hearted. They didn't persuade me to ever buy anything from them again.

Believe it or not...this is the transcript of an actual radio
conversation between a US naval ship and Canadian
authorities off the coast of Newfoundland in October 1995.
The Radio conversation was released by the
Chief of Naval Operations on October 10,1995.

US Ship:
Please divert your course 0.5 degrees
to the south to avoid a collision.

CND reply:
Recommend you divert your course 15 degrees
to the South to avoid a collision.

US Ship:
This is the Captain of a US Navy Ship.
I say again,divert your course.

CND reply:
No. I say again,you divert YOUR course!

US Ship:
THIS IS THE AIRCRAFT CARRIER USS CORAL SEA,
WE ARE A LARGE WARSHIP OF THE US NAVY.
DIVERT YOUR COURSE NOW!!

CND reply:
This is a lighthouse. Your call........

Was the store your refering to a franchise
location or just a dealer? that can make a VERY
big difference.

Nicholas Lodahl

P.S. i didn't even need to take a drug test

Out of the 4 I shop at, there is 1 man who knows whats going on, and I think he is a manager or some type of authoritive figure. I know 1 for sure is a franchise, which has little selection of anything, and doesn't advertise for sales, but that one is close. Its just 1 guy who runs that. H is real nice, but from what I see, knows mostly about TV's and stereos, and cell phones, not much about radios. The others I'm not sure about, but they are all in malls (aren't most anyway?)
Which one do you think is better to go to? Franchise or a dealer?

I have peronally never had a serious problem there only minor,but I really made them mad one day.An old lady was in line in front of me ,with an antique looking cordless phone, I mean probably one of the first kind that sold kind of cheap.An AT&T I think it was .Anyway, it was broke and she was in there asking them if they could help her fix it.They gave her the run around about charging her to saulder this and replace that .I tried my best to bite my tongue then.But when he told her that the parts & total was like $80 and some change .I told her she could go to walmart & buy a much better phone than that one.I know that phone wasn't worth $10 dollars.Or rent one from the phone company & that way if it messed up they would replace it.She told me thank you & glared at the young boy at the register and left.What kind of sleaze takes advantage of a little old lady like that.He looked at said "thank alot" I said "anytime now ring up my adapter."or do you want me to go to wal-mart too? Lets just say He was none too happy.

The Bottom Line is retailers like Radio Shack and others have forgotten that they would not be there without the customers, they forgot "CUSTOMER SERVICE". If enough folks stop going to places that failed to provide real customer service, then the total face of the service industry would change over a period of time. But - by then we could all be dead.....

I really made them mad one day two I was looking for a bnc adapter to put my mag mount cb antena to my handheld cb radio I asked for one. The man in there said there over there I said thanks when i looked I did not see one so I went and asked him if he could help me he said "Are you blind little boy they are rite there'' I may only be 15 but I had money and it sould not matter the age. So I said thanks a lot a$$ hole. He said nothing. So I went and picked up about 30 or 40 items and pilled them on the ring up desk he started to ring them up and when he got finished the total came to like 300 dollars I said since you were such an a$$ i will let you have the pleasure of puting it all back and left.

A dealer is going to give you the best selection
because there allowed to carry other brands
besides radio shack. Also, they have local
managment and ownership so they have a better
idea of what is needed in the area. Plus, they
make less on there products so they have to sell
more to stay in business. This means that there
willing to work harder for business. just my two
cents.

Herw's more about the pending legislation in Congress, I hope it's of interest to the list(s)
----- Original Message -----

Openness - http://www.openness.org

Someone at rec.radio.scanner was kind enough to mark up the Comm Act of 1934 to show how HR3489 will affect it. (They explicitly want to make it illegal for anyone to divulge what they intercept off a public safety radio channel - isnt that mavelous?)

Re: H R 3489
Here is a partial text of H.R. 34890, followed by an affected section of the Communications Act, with insertions and deletions proposed in this Bill. It may be necessary to use an 80 column or wider screen.
==========
H.R.3489 (partial text)
Wireless Telecommunications Sourcing and Privacy Act (Introduced in the House)
SEC. 6. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.
          Section 705 of the Communications Act of 1934 (47 U.S.C. 605) is amended--
                    (1) in the heading of such section, by inserting `interception or´ after `unauthorized´;
                    (2) in the first sentence of subsection (a), by striking `Except as authorized by chapter 119, title 18, United States Code, no person' and inserting `No person´;
                    (3) in the second sentence of subsection (a)--
                              (A) by inserting `intentionally´ before `intercept´; and
                              (B) by striking `communication and divulge´ and inserting `communication, and no person having intercepted such a communication shall intentionally divulge´;
                    (4) in the fourth sentence of subsection (a)--
                              (A) by inserting `(A)´ after `intercepted, shall´; and
                              (B) by striking `thereof) or´ and inserting `thereof); or (B)';
                    (5) by striking the last sentence of subsection (a) and inserting the

following: `Nothing in this subsection prohibits
          an interception or disclosure of a
communication as authorized
by
chapter 119 of title 18, United States Code.';
                    (6) in
subsection (e)(1)--
==========
The following section shows how the pr0posed HR3489 will affect the Comm
Act of 1934 - ed/PS
==========
Text of 47 USC section 605 (partial) as modified. XX ... XX indicates
deletion of text.
<< ... >> indicates insertion of text
Sec. 605. Unauthorized
Added <<interception or>>
publication or use of communications
-STATUTE-
        (a) Practices prohibited
Deleted   XXExcept as authorized by chapter 119, title 18, no personXX
Added <<No person>>
receiving, assisting in receiving, transmitting, or assisting in
transmitting, any interstate or foreign communication by wire or radio
shall divulge or publish the existence, contents, substance, purport,
effect, or meaning thereof, except through authorized channels of
transmission or reception, (1) to any person other than the addressee,
his agent, or attorney, (2) to a person employed or authorized to
forward such communication to its destination, (3) to proper accounting
or distributing officers of the various communicating centers over which
the communication may be passed,
  (4) to the master of a ship under whom he is serving, (5) in
response to a subpena issued by a court of competent jurisdiction, or
(6) on demand of other lawful authority. No person not being authorized
by the sender shall
Added <<intentionally>>
intercept any radio
Deleted XXcommunication and divulge XX
Added <<communication, and no person having intercepted such a
communication shall intentionally divulge>>
or publish the existence, contents, substance, purport, effect, or
meaning of such intercepted communication to any person. No person being
entitled thereto shall receive or assist in receiving any interstate or
communication by radio and use such communication (or any information
therein contained) for his own benefit or for the benefit of another not
entitled thereto. No person having received any intercepted radio
communication or having become acquainted with the contents, substance,
purport, effect, or meaning of such communication (or any part thereof)
knowing that such communication was intercepted, shall
Added <<(A) divulge or publish the existence, contents, substance,
purport, effect, or meaning of such communication (or any part >>

Deleted XXthereof) or XX
Added << thereof); or (B) >>
use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto.
Deleted XXThis section shall not apply to the receiving, divulging, publishing, or utilizing the contents of any radio communication which is transmitted by any station for the use of the general public, which relates to ships, aircraft, vehicles, or persons in distress, or which is transmitted by an amateur radio station operator or by a citizens band radio operator. XX
Added <<Nothing in this subsection prohibits an interception or disclosure of a communication as authorized by chapter 119 of title 18, United States Code>>
==========
This is the exception that would be deleted by HR3489
==========

Information:
From section 119, Title 18:
(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person -
(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the general public;
(ii) to intercept any radio communication which is transmitted -
(I) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;
(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;
(III) by a station operating on an authorized frequency within the bands allocated to the amateur, citizens band, or general mobile radio services; or
(IV) by any marine or aeronautical communications system;
(iii) to engage in any conduct which -
(I) is prohibited by section 633 of the Communications Act of 1934; or
(II) is excepted from the application of section 705(a) of the Communications Act of 1934 by section 705(b) of that Act; (iv) to intercept any wire or electronic communication the transmission of which is causing harmful interference to any lawfully operating station or consumer electronic equipment, to the extent necessary to identify the source of such interference;
or
(v) for other users of the same frequency to intercept any radio communication made through a system that utilizes frequencies monitored by individuals engaged in the provision or the use of such system, if such communication is not scrambled or encrypted.

>on another list...

I got this from another list... I think it applies to this:-)

I was on my way to the post office to pick up my case of free
M&M's,(sent to me because I forwarded their e-mail to five other people,
celebrating
the fact that the year 2000 is "MM" in Roman numerals), when I ran into a
friend whose neighbor, a young man, was home recovering from having
been served a rat in his bucket of Kentucky Fried Chicken - which is
predictable, since as everyone knows, there's no actual chicken in
Kentucky Fried Chicken, which is why the government made them change
their name to KFC. Anyway, one day this guy went to sleep and when he awoke
he was in his bathtub and it was full of ice and he was sore all over and
when he got out of the tub he realized that HIS KIDNEYS HAD BEEN
STOLEN. He saw a note on his mirror that said "Call 911!" but he was afraid to
use his phone because it was connected to his computer, and there was a virus
on his computer that would destroy his hard drive if he opened e-mail
entitled "Join the crew!" He knew it wasn't a hoax because he himself was
a computer programmer who was working on software to prevent a global
disaster in which all the computers get together and distribute the
$250.00 Neiman-Marcus cookie recipe under the leadership of Bill Gates.
(It's true - I read it all last week in a mass e-mail from BILL GATES
HIMSELF,
who was also promising me a free Disney World vacation and $5,000 if I would
forward the e-mail to everyone I know.) The poor man then tried
to call 911 from a pay phone to report his missing kidneys, but a
voice on the line first asked him to press #90, which unwittingly gave the
bandit full access to the phone line at the guy's expense. Then reaching into
the coin-return slot he got jabbed with an HIV-infected needle around
which was wrapped around a note that said, "Welcome to the world of AIDS."
Luckily he was only a few blocks from the hospital - the one where
that little boy who is dying of cancer is, the one whose last wish is for
everyone in the world to send him an e-mail and the American Cancer
Society has agreed to pay him a nickel for every e-mail he receives.
I sent him two e-mails and one of them was a bunch of x's and o's in the
shape of an angel (if you get it and forward it to more than 10
people, you will have good luck but for 10 people you will only have OK luck
and if you send it to fewer than 10 people you will have BAD LUCK FOR
SEVEN YEARS). So anyway the poor guy tried to drive himself to the hospital,
but on the way he noticed another car driving without its lights on. To be
helpful, he flashed his lights at him and was promptly shot as part of
a gang initiation. Send THIS to all the friends who send you their junk mail

and you will receive 4 green m&ms, but if you don't the owner of
Proctor and Gamble will report you to his Satanist friends and you will have
more bad luck: you will get cancer from the Sodium Laureth Sulfate in your
shampoo, your wife will develop breast cancer from using the
antiperspirant which clogs the pores under your arms, and the
government will put a tax on your e-mails forever. I know this is all true
'cause
I read it on the Internet.

Well, they are 99% likely to be between 854 and 870. Just search the band immediately after something bad happens, then you might catch them.

try a frequency counter if you don't have a scout.. Had the same problem 5 years ago with local government. Got a frequency counter and followed fire trucks and cops around town so that when they transmit the freq counter gives the input frequency.

3175. Fwd: cb: we need ur support NOW !

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-21 06:31:08 UTC
From: Rich Barron
Topic: 3175 Message: 3175

This just in:

I just picked this up and thought it may be of interest to some of our friends in Europe. What you see is all I know about it. Good luck.

Rich Barron
Stupid Scanner Tricks

---snip---

Dear Old Men !

IMPORTANT !

Please lend us your attention for a short moment

Law within the member countries of the common market regarding radio electricity transmissions on the 27 MHz band, i.e. our citizen band, is restricting the fundamental citizen liberties.

It has been decided that the new generation of wireless numeric home telephones is going to be operated on our frequency band, and thus the superior and inferior band are to be forbidden, and the usual 40 channels band only to be operated in FM mode !

Yet these laws are being applied to Italy, that will be followed by Portugal, and then Spain aso France will be hit in 2008.

This year, the F.F.C.B.L. (for French Federation for Free CB) is holding on april, 22nd and 23rd its yearly general meeting in Mulhouse, Upper-Rhine, in Alsace-France (http://www.multimania.com/fdx/appel/appel.html)(Tonton 12 ☐ 14MDX036F.12).

This meeting is organized by the T.C.M. (for Tram Cb Mulhouse), which president, Mr Norbert Heydel(14TCM01), is the vice-president of the FFCBL.

We are welcoming 1500 people from France and abroad in a congress at the exhibition parc of Mulhouse.

We have been working for a whole year for a full success, then we all must now react !

Most of the French clubs will be represented. We also have invited our local authorities as well as the concerned ministers : We already know that the county authorities will be present, some support us, others regard us with interest

We intend to defend the imprescriptable rights of man, upgrade the image of CB to the rank of public utility, and hence give full value to our rights and demand through a vast petition the free use of 120 channels in all modes and distances.

Thus we require a full support from all European radio operators, above and beyond personal interests, into a large european common action: then your supporting us in France will help you help yourselves in the face of Europe.

Dear old men, we need your support NOW ! Do not wait ! This can be done at no costs !

We must appear decided in a large party:

a.. Send us your support message at sight.
b.. Demand the respect of your citizen liberties concerning communications for local QSO as well as Dx on a 120 channels band starting from 26515 kHz to 27855 kHz, in all modes AM + FM + USB + LSB + CW
c.. Transmit this message further to your friends and all CB operators.
d.. Plead actively our cause on the web, home and on the air.
Contact us freely :

a.. E-mail : cb@...
b.. Fax from now on until april,24th 2000 : to FFCBL c/o TRAM-CB-Mulhouse (0033) 389 46 54 25
c.. Post to :
a.. TCM ☐ Tram-CB-Mulhouse
b.. P.O.Box 3148
c.. F68063 MULHOUSE Cedex
d.. On the air on april,22nd & 23rd
a.. On frequency 27405 kHz USB mode (channel 40 citizen band)
b.. Call OM " Charles " 14 TCM 27
c.. We shall keep two field stations in " active " standby on the Great Balloon culminating at 1400 m.
d.. And retransmit all message to the congress rooms.
e.. Proceed in QSP if the propagation slacks, and build a solidarity chain towards Mulhouse.
Last but not least, a great big thanks to you all.

Hear you soon ☐ 73 & 51 - 14TCM☐s

Hi Anthony, my name is ray, I would like to thankyou for that website on DTMF
DECODERS. I've been looking one but didn't where to go.

Anthony, I'm looking for an audio inverter that I could use it on my
scanner/cordless phone. Would you post that website if you have one available.
THANKS,
RAY

From: brown82@marshall.edu
Topic: 3172 Message: 3180

Let's clear this up. Do you want a speech frequency inversion descrambler or a touch-tone decoder? If you want a touch tone decoder, Ramsey sells an OK model. One thought to keep in mind is that ANY DTMF decoder works 100% better when it receives input from baseband audio instead of the speaker output.

> Check out http://hometown.aol.com/ctpds49/index.html
> this may be what your looking for in a decoder.
This is a speech frequency inversion decrambler (donald duck cordless phones)

> >
> > and anybody who knows where i can get a dtmf decoder, or where i can get a
> > good one.

3181. Re: [SST] Broken Antenna

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-22 02:32:07 UTC
From: brown82@marshall.edu
Topic: 3179 Message: 3181

Take the radio apart, desolder and remove the BNC jack and try to work the pin out with a sewing needle (from the back side, of course). If that doesn't work, buy another BNC jack like that one. HINT: It's NOT the BNC jack that Radioshaft sells. The one they sell has the nut on the wrong side.

3182. Realistic Pro-37 mods etc.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-22 05:10:42 UTC
From: Doug Holloway
Topic: 3182 Message: 3182

I know that there is a modification for the Realistic Pro-37 that will make the 800 band continuous, but I don't have enough confidence in my soldering skills to risk killing my scanner. Does anyone know if it is possible to put this scanner in 'test' mode? Doug

3186. Pro 2006 Mod

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-22 17:51:33 UTC
From: Bo Harris
Topic: 3186 Message: 3186

Has anyone have the mod book that has the led strength meter mod in it. I have the mod on my scanner but 2 wires came loose and I can't find my mod book to fix it. If anyone can scan the pages and send just that mod, I would highly appreciate it

Thanks
Bo Harris

TEXTS

CABLEVISION OF BOSTON, INC., CABLEVISION OF BROOKLINE LIMITED PARTNERSHIP, BOSTON & BROOKLINE, MA. Granted appeal of local rate order and remanded the local rate order to the Massachusetts Department of Public Utilities.
Action by Deputy Chief, Cable Services Bureau. Adopted: April 26, 2000. by MO&O. (DA No. 00-950). CSB

THREE EAGLES OF COLUMBUS, INC. Found Three Eagles of Columbus, Inc., licensee of Station KROR(FM), Hastings, NE, apparently liable for a forfeiture in the amount of seven thousand dollars ($7,000) for

broadcasting indecent material. By Notice of Apparent Liability for Forfeiture. Action by Chief, Enforcement Bureau. Adopted: April 27, 2000. (DA No. 00-951). ENF

COUNTY OF SURRY. Rescinded monetary forfeiture in the amount of $2,000 for
apparent violation of licensing rules. Action by Chief, Enforcement Bureau. Adopted: April 27, 2000. by MO&O. (DA No. 00-940). ENF

C.F. COMMUNICATIONS CORP., ET AL. V. CENTURY TELEPHONE OF WISCONSIN, INC., ET AL. On April 13, 2000, the Commission released an order granting a number of formal complaints, which concerned the assessment of end user carrier line charges on independent payphone providers by certain local exchange carriers. The complaints listed in the caption above were inadvertently omitted from the April 13 Order, FCC 00-133 By Erratum. Action by Chief, Market Disputes Resolution Division, Enforcement Bureau.
Adopted: April 27, 2000. ENF

SPRINT COMMUNICATIONS COMPANY, L.P. (SPRINT), MCI TELECOMMUNICATIONS CORPORATION (MCI) V. BELL ATLANTIC-PENNSYLVANIA, ET AL. Resolved 13 formal complaints brought by Sprint and MCI both interexchange carriers, against eight local exchange carriers, pursuant to section 208 of the Communications Act. The complaints all similarly allege the defendant LECs improperly assessed carrier common line charges for interstate calls involving certain LEC optional calling services, such as call forwarding and call-waiting. Complainants assert that the LECs' practices violate Section 69.105(a) of the Commission's access charge rules, as well as Sections 201(b) and 203(c) of the Communications Act. Action by Chief, Enforcement Bureau. Adopted: April 27, 2000. by MO&O. (DA No. 00-952).
ENF

ACHERNAR BROADCASTING COMPANY/LINDSAY TELEVISION COMPANY. Approved a settlement agreement filed January 30, 1998, by Lindsay Television and Archernar Broadcasting Company providing for the dismissal of Lindsay's application, the amendment of Achernar's application for channel 64 to specify Charlottesville Broadcasting Corporation as the applicant, and the
grant of Achernar's amended application. Dkt No.: MM-86-440. Action by the Commission. Adopted: April 19, 2000. by MO&O. (FCC No. 00-149).
MMB

SARANAC LAKE AND WESTPORT, NEW YORK. Effective June 12, 2000, Amended the FM Table of Allotments for the communities of Saranac Lake, New York, and Westport, New York. Dkt No.: MM-99-83. Action by Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau. Adopted: April 19, 2000. by R&O. (DA No. 00-945). MMB

OLPE, KANSAS/COVELO, CALIFORNIA. Proposed to Amend Table of Allotments for
these communities. Comments Due: June 19, 2000, Reply Comments Due:

July
5, 2000. Dkt No.: MM-00-71, MM-00-72. Action by Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau. Adopted: April 19, 2000. by NPRM. (DA No. 00-943). MMB

IN THE MATTER OF AMENDMENT OF SECTION 73.202(B), TABLE OF ALLOTMENTS, FM BROADCAST STATIONS (ANNISTON AND ASHLAND, ALABAMA, AND COLLEGE PARK. Effective June 14, 2000, Amended the FM Table of Allotments for these communities. Dkt No.: MM-98-112. Action by Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau. Adopted: April 24, 2000. by R&O. (DA No. 00-322). MMB

WWC LICENSE, L.L.C. Dismissed N.E. Colorado Cellular, Inc.'s Petition as moot and granted the WWC Application. Action by Deputy Chief, Commercial Wireless Division, Wireless Telecommunications Bureau. Adopted: April 27,
2000. by Order. (DA No. 00-955). WTB

MOBILE RELAY ASSOCIATES, INC. Rescinded the Order on Reconsideration in this proceeding, which dismissed the petition for reconsideration by Mobile Relay Associates, Inc. Action by Chief, Public Safety and Private Wireless Division, Wireless Telecommunications Bureau. Adopted: April 27,
2000. by Order. (DA No. 00-954). WTB

FLORIDA POWER AND LIGHT COMPANY. Granted the Request for Waiver of Florida
Power and Light Company, filed on July 9, 1999. Action by Chief, Public Safety and Private Wireless Division, Wireless Telecommunications Bureau.
Adopted: April 25, 2000. by Order. (DA No. 00-932). WTB

AMERICAN PRESIDENT LINES, BERGEN BRUNSWICK DRUG COMPANY, DIONEX CORPORATION, FORT BRAGG UNIFIED SCHOOL DISTRICT, ROWLAND UNIFIED SCHOOL DISTRICT. Denied the Petitions for Reconsideration of grant of PLMR licenses. Action by Chief, Public Safety and Private Wireless Division, Wireless Telecommunications Bureau. Adopted: April 26, 2000. by MO&O. (DA No. 00-933). WTB

3214. How to find physical location of specific cell towers

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-29 07:26:07 UTC
From: Andrew Koch
Topic: 3214 Message: 3214

Alright... Short of driving around with my cell phone watching the signal strength indicator, how can I find the actual location of the towers in my area...

I exhausted the Percon Datafinder's database... the company's don't seem to be listed....

An option would be to build a Yagi antenna for the frequency and hook it up to a SWR meter, but that would be a lot of driving around too, and a lot of mistakes, because several companies run at this frequency.

I have an idea that if I got to my local community's offices, they can probably tell me who has zoning variances and where... I did this once for my mother, who had a cell tower flashing a xenon strobe in her living room windows...

I'm in a bind here... My ultimate goal is to build a passive repeater for a couple of buildings that I frequent to increase my coverage.

Andrew Koch

A good way to find the transmitter location for any frequency is to use ScannerBaseXE (I'm not sure where it is, but a search engine can probably tell you) and a map program (Microsoft Street or Map or whatever they call it is what I use). Put in your desired frequency range in ScannerBaseXE, get the results, and use their 'export' command, the use the 'import' command in your map program. It will put little marks or thumbtacks or something on the map wherever your transmitter is at.

Hope this helps,
Later

Go to http://www.berkana.com/tower.php3 and you can find just about every
wireless tower that's registered with the FCC.

3219. Yagi antenna and also Scanner Laws

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-04-29 17:14:29 UTC
From: fdlfishing@aol.com
Topic: 3219 Message: 3219

Hi,
How do you go about building a Yagi antenna? I would like to do this, or is there a way to buy one without a license? I'm not very familiar with this, sorry.
I would also like to ask, when will the scanner bill be put up in Congress? I know about 2 or 3 months ago we were all worried about it, but I'd like to stay informed. I have already written my senator.

I know from past experience that the cell companies themselves wont
give you that info because they're afraid of sabotage. Since all
communications of a commercial nature require a licence, wouldn,t the
communications departments publish maps of all stations and tall structures
to aid them in assigning frequencies and prevent air traffic tragedies? I,ve
never purchased these maps, but in Canada, I believe they're available for
sale in the larger public libraries of the larger cities.

They are usually listed in all major " scanner frequency directories " and
on the net's major search engines when you search for " C.B. Frequencies. "
So are the marine channels and TV channels.

The Canada Flight Supplement (the VFR pilots "bible") has a list of all obstructions that are required to display obstruction lights. I don't have my copy handy, but I believe they are listed by Province, City and Geo Co-ordinates. Try contacting your local Flight Service Station (U.S. or Canada) to see if they can help you.

Most FSS also maintain a list of who operates which towers in their local area, in case they need to contact them if the lights are not working properly.

From: Rich Barron
Topic: 3225 Message: 3225

Dennis Sellers at MacCentral.com is looking for leads on Macintosh software for scanners. If you've got some info and would like to see your name in print (or at least on-line), stop by:

http://www.maccentral.com/news/0004/29.info.shtml

and give Dennis a heads-up.

Be sure to tell him that you heard about the column via Stupid Scanner Tricks!

there are alot of radio related web pages of
cb,ham,etc that list the frquencies,but police call
books,have em too,and they list other cb freq's as
well...

From: larry fields
Topic: 3221 Message: 3227

you don't need a license to build a antenna yagi,just
a book like the arrl antennat books,a calculator and
some of the parts like aluminum and various other
components to put it together,lew's book that is
advertised in cq is a good one,also there is vhf
antenna books..brouse the HAM RADIO OUTLET'S catalog
to see one,or cushcraft,diamond,hygain,etc...but it
depends on how much you wanna spend for one...an old
t.v. antenna is also good for this too..73's and good
luck....

Topic: 3231 Message: 3232

I don't know any specifics... However, I'd search around the 40-50 MHz band,
as well as 400-500 and 850-1000

Those are common frequencies for wireless audio.

Another option is to take and sweep the theatre with a frequency counter.

From: "Richard L. Whitmore" <richardwhitmore@...>
Subject: I Wish You Could Know...

I wish you could know.....

I wish you could know what it is like to search a burning bedroom for trapped children, flames rolling above your head, your palms and knees burning as you crawl, the floor sagging under your weight as the kitchen below you burns.

I wish you could comprehend a wife's horror at 3 in the morning as I check her husband of 40 years for a pulse and find none. I start CPR anyway, hoping to bring him back, knowing intuitively it is too late. But wanting his wife and family to know everything possible was done to try to save his life.

I wish you knew the unique smell of burning insulation, the taste of soot-filled mucus, the feeling of intense heat through your turnout gear, the sound of flames crackling, the eeriness of being able to see absolutely nothing in dense smoke-sensations that I've become too familiar with.

I wish you could understand how it feels to go to work in the morning after having spent most of the night, hot and soaking wet at a multiple alarm.

I wish you could read my mind as I respond to a building fire "Is this a false alarm or a working fire? How is the building constructed? What hazards await me? Is anyone trapped?"

Or to an EMS call, "What is wrong with the patient? Is it minor or life-threatening? Is the caller really in distress or is he waiting for us with a 2x4 or a gun?"

I wish you could be in the emergency room as a doctor pronounces dead the beautiful five-year old girl that I have been trying to save during the past 25 minutes. Who will never go on her first date or say the words, "I love you Mommy" again.

I wish you could know the frustration I feel in the cab of the engine or my personal vehicle, the driver with his foot pressing down hard on the

pedal, my arm tugging again and again at the air horn chain, as you fail to yield the right-of-way at an intersection or in traffic. When you need us however, your first comment upon our arrival will be, "It took you forever to get here!"

I wish you could know my thoughts as I help extricate a girl of teenage years from the remains of her automobile. "What if this was my sister, my girlfriend or a friend? What were her parents reaction going to be when they opened the door to find a police officer with hat in hand?"

I wish you could know how it feels to walk in the back door and greet my parents and family, not having the heart to tell them that I nearly did not come back from the last call.

I wish you could know how it feels dispatching an officers, fireman and EMT's out and when we call for them and our heart drops because no one answers back or to here a bone chilling 911 call of a child or wife needing assistance.

I wish you could feel the hurt as people verbally, and sometimes physically, abuse us or belittle what I do, or as they express their attitudes of "It will never happen to me."

I wish you could realize the physical, emotional and mental drain or missed meals, lost sleep and forgone social activities, in addition to all the tragedy my eyes have seen.

I wish you could know the brotherhood and self- satisfaction of helping save a life or preserving someone's property, or being able to be there in time of crisis, or creating order from total chaos.

I wish you could understand what it feels like to have a little boy tugging at your arm and asking, "Is Mommy okay?" Not even being able to look in his eyes without tears from your own and not knowing what to say.

Or to have to hold back a long time friend who watches his buddy having rescue breathing done on him as they take him away in the ambulance. You know all along he did not have his seat belt on. A sensation that I have become too familiar with.

Unless you have lived with this kind of life, you will never truly understand or appreciate who I am, we are, or what our job really means to us...

I wish you could though.

It has to do with imaging, I am not sure how it works but the signal is sort of a reflection of the freq of the cell phone signal.Get a scanner that goes up to 956 mzh and lower scan these to find the freq then tune in the channel on your tv to that freq and you may pick up something or not.

Group please help me out.Im looking for a new scanner trunck type any reccomendation would help and is apprciated thanks Anthony

3244. Re: [SST] Cell Phones w/ UHF TV?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-08 00:45:37 UTC
From: Jack Ricci
Topic: 3239 Message: 3244

The cell towers broadcast cell calls on frequencies between 870-895 Mhz, roughly. The 870 Mhz area, roughly, used to be assigned to the upper UHF TV channels above channel 80. I have tuned in a few cell calls on channel 82 and 83, very weakly, and overlapping each other, but the antenna was on a rotor atop a 40 foot tower and the cell site was within two miles, with the antenna aiming right at the cell site. The older TVs with the manual, rotary fine tuner worked best because I could manually separate the overlapping calls somewhat by turning the fine tuning knob one way or the other. It was new and exciting for a bit, but the limitations frustrated me quickly. It encouraged me to buy an expensive scanner with proper cell monitoring ability. They are not illegal to own in Canada, yet. It's illegal to use what you hear in Canada, so we can listen, learn, and keep it under our hat. I find that in a small town, you can verify that what you thought was really going on behind the scenes, really is going on behind the scenes. That is valuable to an entrepreneur like me. Now I have some people skills 'cause I know how people react in real life to the numerous, different events that all of us will go through---and I'll be better prepared. I know who to avoid, who to deal with, what to say and what not to say, what to do and what not to do, what really happened here and there, and.....I heard it all at the local coffee shop. Knowledge is power! I drink a lot of coffee..... Hope your TV tuner works good!
Jack

3250. Re: [SST] Programming a scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-08 01:59:31 UTC
From: Andrew Koch
Topic: 3236 Message: 3250

Get to the Bank and channel that you want to program. The easiest way to do this is put the scanner in scan mode with the squelch all the way open, select the bank, and than press the "Manual" key until you are at the channel that you want to program.

Press the "Program" key, type in the frequency (i.e. 33.86) and press "Enter" Press "Program" again to advance to the next channel.

3251. Re: [SST] Cell Phones w/ UHF TV?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-08 04:29:49 UTC
From: Doug Holloway
Topic: 3239 Message: 3251

You can hear cell phone calls with a TV tuner that goes above 80 on UHF. This may sound primitive, but here's how I used to do it. I had two old 13 inch B & W TVs. I sat them on a table facing one another. I turned them both on with the sound barely audible and switched the tuners to UHF, tuning them in the low 80s frequency. When I had both TVs synchronized to approximately the same frequency, I turned the volume completely off on one set, and up to a comfortable level on the other set. Slowly manipulating the fine tune control on the muted set, I was able to pick up cell phone conversations on the other one very clearly. Try it, it works!

3252. Re: [SST] Cell Phones w/ UHF TV?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-08 06:09:18 UTC
From: brown82@marshall.edu
Topic: 3237 Message: 3252

You have more than a chance. If you point it at a cell tower or heavily populated area, you are sure to get results. Unfortunately, they will be poor at best. TV audio is Wide-band FM, while cells are narrow band FM. This means you may hear more than a dozen conversations on one channel. It would look like this:
<<< TV audio channel 80-something >>>
<cell><cell><cell><cell><cell><cell><cell><cell><cell><cell><cell><cell>
You would hear all these conversations at once.

3256. Scanning On Board Cruise Ships?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-09 05:23:00 UTC
From: CGCOM
Topic: 3256 Message: 3256

Hi All,

I was wondering what experience list members may have had bringing their scanners and related toys on board cruise ships, in this case a Carnival ship. Assuming normal operational discretion is observed what would I be able to hear with a portable scanner once at sea?

I have seen postings of freq info for Carnival Cruise lines UHF and VHF itinerant and the Port of Miami VHF Marine channels but I am not sure what ship or era those appied to.

I heard that some ships have low-power UHF repeaters for operations and crew comms. I assume with 2000 passengers and 1000 crew this might be interesting to listen to if they speak english over the radio which is uncertain due to the "international" make up of the ships crew.

Anyone seen any amateur or FRS radios in use on board a cruise in international waters? I realize there may be problems at some ports but...

Anybody been there / done that? Your comments might make or break having to pack the radio bag and are greatly appreciated.

-Charlie-

Hi ,
I will going to Vancouver,Canada soon.
I am looking for a scanner come with trunk tracker Motorola,LTR or even MPT,
if they have all this in one unit. Also able to interface scanner to
computer.
I need recomendation from you, give me the guidance.
Thanks in advance.
Bye

Jeremy , Go to http://scannermaster.com/ they have a good program for
this scanner.
Matter of fact, they designed that scanner. I'm sure you will like it.
I have had mine since before
the change. It can get all freqs. even the 800 and 900 . There was a
flaw in the system. Does
yours get all the banned freqs.
Gene

You hear pretty much what you hear for hotels and stuff... You'll hear housekeeping, and maintenance... occasionally Security....

It can be a lot of fun...

If you have Marine frequencies, you might grab some Ship to Shore Radio, maybe even the Radiotelephones, if that ship isn't using the Sat phones...

Hey Cg, I would check with the regs on this one, You don't want to be the one whom caused a Carnival cruise ship to go aground due to interference. I don't believe it would be a problem, but in the world of Quantum physics, better safe than sorry! I know some radios upset airline navigation, and cannot be used without the Captains permission, or while on instrument flight! Hope this helps, best regards
Gary

TEXTS

CITICASTERS CO. Found Citicasters Co. licensee of Station KITT(FM), Shreveport, Louisiana, apparently liable for forfeiture in the amount of four thousand dollars ($4,000) for a violation of Section 73.1216 of the Commission's rules, which requires licensees, among other things, to fully
and accurately disclose material terms of a contest. Found that Citicasters conducted a contest, "Millionaire Monday," without disclosing a material term of the contest, i.e., that the prize was one million Turkish lira, not $1,000.000. By Notice of Apparent Liablity for Forfeiture By Notice of Apparent Liability for Forfeiture. Action by Chief, Enforcement Bureau. Adopted: May 5, 2000. (DA No. 00-1016). CCB

AMERITECH. Granted Petition of Ameritech for LATA modificiation for the limited purpose of providing traditional, two-way, non-optial ELCS at the specific location, identified in File No. NSD-L-99-73. Action by Chief, Network Services Division, Common Carrier Bureau. Adopted: May 8, 2000. by MO&O. (DA No. 00-980). CCB

CITIZENS TELECOMMUNICATIONS COMPANIES. Suspended for one day the revisions
to Citizens' Tariff F.C.C. Nos. 1 applicable to Expanded Interconnection Service offerings filed under Transmittal No. 75. Dkt No.: CC-97-240. Action by Chief, Competitive Pricing Division, Common Carrier Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1032). CCB

ALTOONA AREA SCHOOL DISTRICT, ALTOONA, PENNSYLVANIA/RALLS INDEPENDENT SCHOOL DISTRICT, RALLS, TEXAS. Extended the time period for taking action
in the requests for review of decisions by the Schools and Libraries Division for sixty-days from the original ninety-day deadline to July 6, 2000 for the request for review by Altoona Area School District and July 10, 2000 for the request for review filed by Ralls Independent School District. Action by Chief, Common Carrier Bureau. Adopted: May 5, 2000.
by Order. (DA No. 00-1027). CCB

MEDIAONE. Denied MediaOne' petition for partial reconsideration of Aamen TV Ministry, 13 FCC Rcd 22244 (CSB 1998). Action by Deputy Chief, Cable Services Bureau. Adopted: May 4, 2000. by MO&O. CSB

SUBURBAN CABLE TV COMPANY, INC. Granted complaints filed against the February 15, 1995 rate increase for the cable programming services in tier
in Lancaster, PA. Action by Chief, Financial Analysis and Compliance Division, Cable Services Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1022). CSB

SUBURBAN CABLE TV COMPANY, INC. Granted complaints filed against February 15, 1995 rate increase for the cable programming services tier in Strasburg, PA. Action by Acting Chief, Financial Analysis and Compliance Division, Cable Services Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1023). CSB

SUBURBAN CABLE TV COMPANY, INC. Granted complaints filed against Operator's cable programming service tier rates charged in Paradise, PA. Action by Acting Chief, Financial Analysis and Compliance Division, Cable Services Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1024). CSB

COMCAST CABLEVISION OF THE SOUTH. Granted complaint filed against Operator's cable programming service tier rates charged in the City of Red
Bank, TN. Action by Acting Chief, Financial Analysis and Compliance Division, Cable Services Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1025). CSB

COMCAST CABLEVISION OF NEW MEXICO, INC. Granted petition filed by Comcast Cablevision of New Mexico, Inc., seeking special relief to modify the Albuquerque-Santa Fe, New Mexico DMA to exclude Television Broadcast Station KRPV (Ch. 27), Roswell, New Mexico from five of its cable systems in New Mexico. Dismissed as moot, must carry complaint filed by KRPV against Comcast. Action by Chief, Consumer Protection and Competition Division, Cable Services Bureau. Adopted: May 4, 2000. by MO&O. (DA No.
00-1007). CSB

COMCAST CABLE COMMUNICATIONS, INC. Denied complaint filed against Operator's cable programming service tier rate charged in the City of Milford, DE. Action by Acting Chief, Financial Analysis and Compliance Division, Cable Service Bureau. Adopted: May 8, 2000. by Order. (DA No.
00-1030). CSB

COMCAST CABLE COMMUNICATIONS, INC. Denied complalint filed against Operator's cable programming service tier rate charged in Lake Placid, FL.
Action by Acting Chief, Financial Analysis and Compliance Division, Cable
Services Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1026). CSB

MCLEODUSA PUBLISHING COMPANY V. US WEST COMMUNICATIONS, INC. Dismissed without prejudice McLeodUSA's Complaint. Action by Deputy Chief, Market Disputes Resolution Division, Enforcement Bureau. Adopted: May 8, 2000. by Order. (DA No. 00-1029). ENF

SOUTHERN RHODE ISLAND PUBLIC RADIO BROADCASTING, INC. Found Southern Rhode
Island Public Radio Broadcasting, Inc., licensee of noncommercial educational station WBLQ(FM), apparently liable for $1,000 for violating Section 399B of the Communications Act of 1934, as amended ("the Act), and
Section 73.503 of the Commission's rules, by broadcasting impermissible donor and underwriting announcements. By Notice of Apparent Liability for
Forfeiture. Action by Chief, Enforcement Bureau. Adopted: May 5, 2000.

(DA No. 00-1011). MMB

Hi group, I have problems with my Uniden BC 9000xlt "Data-function". In the usermanual it says it will remain scanning after 3 seconds if it meets "dataskip" (800-1041mhz-band). The problem is that if it meets real audio, it remains scanning after 3 seconds, and if it meets "data-skip" it stops. Hilfe?
Øyvind, Norway

As a private pilot, I would like to dispel a myth here...

A Scanner is very well shielded... it does NOT produce enough radio energy to noticeably affect an airplane's instruments.

How many of you have your scanner and a GPS unit in your car? Ever notice interference?

I often carry my scanner when I am flying, and I have NEVER noticed anything. Even my laptop doesn't affect any of my navigation, IFR landing instruments or DME Equipment.

As for a ship... I don't think that you would be able to affect any of the ships systems significantly.

Andy,
As a pilot you may not be a technician. I am a technician, I use a scanner as a crude RF signal generator. I use a Bearcat BC250 with its 10.8MHz IF to generate a signal strong enough to be heard on another receiver. I key in a freq 10.8 above the desired freq to get a good, loud, signal on the receiver being tested.

It is up to you, do you want to be the cause of a mishap? I hope your personal liability insurance is up to date.

SCANNERS RADIATE!
COMPUTERS RADIATE!
The radiation may be low to be within FCC pt15 rules, but they do generate a signal.

While aboard ship, check with the Master before operating. Before sailing, check the registry, laws are different for every country. If it is USA registry you will not need a foreign license to play Ham Radio. Remember that the country of registry governs the rules. You may be able to get a license if you check early enough.

Bob

I've never tried it, but I've heard that 2 GPS units side by side cause IF frequency interference in each unit and make them have terrible accuracy.

3269. Fwd: New ICOM download site

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 2000-05-11 05:16:29 UTC
From: Rich Barron
Topic: 3269 Message: 3269

Icomreceivers.com is the new site you want to visit to download memory channels for your ICOM computer programmable receiver. It's free, it's fast, and it's easy!

Just specify the database parameters of one or more of the following: zip code, city, county, state, radio service, frequency range, company, and many other combinations for the frequency information you want. The site will process specific requests and create an ICOM ICF file in a correct format for a chosen receiver.

The user can download the file to his or her own computer and then, with the ICOM programming software, will be able to clone the data to an ICOM receiver.

The online database has a huge number of frequencies sorted by many different parameters, most importantly by geographic location, frequency range and type of radio service.

The IC-PCR100, IC-PCR1000, IC-R2, IC-R10, IC-R8500, and IC-R75 are supported on the site. Future ICOM radios will be added as well. Soon to come, the all new IC-R3!

It is now easier than ever to find active frequencies, whether you're planning a trip or want to find out more of what's on the airwaves around your home! Visit our exciting new site today at http://www.icomreceivers.com

73 de ICOM America
http://www.icomamerica.com
ICOM Radios. Simply the Best.
